GLOSSARY

DEFINITIONS

The following terms and their definitions are for the purposes of this Instruction.

dietary supplement

A product (other than tobacco) that is intended to supplement a diet that bears or contains one or more of these dietary ingredients: a vitamin; a mineral; an herb or other botanical; an amino acid; a dietary substance for use by humans to supplement the diet by increasing the total daily intake of that substance; or a concentrate, metabolite, constituent, or extract, or combinations of these ingredients.

Is intended for ingestion in pill, capsule, tablet, or liquid form.

Is not represented for use as a conventional food or as the sole item of a meal or diet.

Is labeled as a “dietary supplement.”

Includes products such as an approved, new drug-certified antibiotic or licensed biologic that was marketed as a dietary supplement or food before approval, certification, or license (unless the Secretary of Health and Human Services waives this provision).

nutrition

The processes by which living organisms obtain food and use it for growth, metabolism, and repair. Its stages include ingestion, digestion, absorption, transport, assimilation, and excretion.

The science that deals with food and nourishment, including dietary guidelines, food composition, and the roles that various nutrients have in maintaining health.

other self-care products. Products voluntarily introduced into the body that are not defined strictly as food or dietary supplements. Examples include functional foods (any healthy food claimed to have a health-promoting or disease-preventing property beyond the basic function of supplying nutrients) and transdermal air- and sea-sickness and testosterone patches.
