### SUMMARY

Semantic Flight departed Udorn RTAFB 23/2014L Aug 68 on a night photo reconnaissance mission. Preplanned tactics included all target runs at low altitude. At 2027L Semantic checked in with Alleycat, an airborne control center, requesting clearance for the proposed flight track. Semantic was issued subject clearance at approximately 2030L. This was the last known radio contact with Semantic Flight. Invert, a ground radar station, last plotted Semantic's position as approximately 1719N/10418E at 2027L, i.e., the same position and time as reported by Alleycat. At that time Semantic was directed to contact Waterboy, a ground radar station, for flight following. At 2100L, Alleycat Duty Controller queried Waterboy relative Semantic and was informed that Semantic had not checked in with Waterboy. Two separate RP-4C sorties conducted electronic searches over Semantic's route that same evening with negative results. Subsequent electronic, photo, and visual searches were also conducted, all with negative results.
