Acknowledgments

DMDC is indebted to numerous people for their assistance with the *2002 Status of the Armed Forces Surveys—Workplace and Gender Relations* (Form 2002GB). The Workplace and Gender Relations survey was conducted under the leadership of Anita Lancaster, Assistant Director for Program Management, and Timothy Elig, Chief, Survey and Program Evaluation Division (SPED).

The questionnaire was designed by SPED's Program Evaluation Branch. Survey content development included input from representatives of policy offices within OUSD(P&R), especially Jimmy Love, and from Service representatives to the Inter Service Survey Coordination Committee. Under contracts DASW01-C-97-0071/2 through the Consortium of Universities of the Washington Metropolitan Area, subject matter experts from the University of Illinois at Urbana-Champaign helped develop scales used in the survey. Data Recognition Corporation (DRC), under contract M67004-99-D-0001/0011, performed data collection and preparation. Contributors at DRC included Mary Latta, Jia Pan, and Michelle Tolstonson. Data processing and production of this tabulation volume were performed by Westat under contract M67004-98-D-0002/0014. Contributors at Westat included Adefisayo Adebayo, Theresa Famolaro, and Rose Windle.

Quality assurance and presentation of complex items in the tabulation volume were overseen by a team composed of DMDC employees and Consortium Research Fellows. The members of the team were Rachel Lipari and Kristin Williams, and Regan Klein, Lee Howell, Karen Wessels, Michael Ford, Dianna Belman, and Amber Beam, respectively.

The weights were developed by Ismael Flores-Cervantes, Richard Valliant, Lee Harding, and Bridgett Bell at Westat. DMDC staff in the Programming Branch, Bob Hamilton, Carole Massey, and Susan Reinhold, constructed the sampling frame, drew the sample, and developed files supporting data collection and weighting.

2002 STATUS OF THE ARMED FORCES SURVEYS WORKPLACE AND GENDER RELATIONS: TABULATIONS OF RESPONSES, VOLUMES 1 & 2

Preface

The 2002 Status of the Armed Forces Surveys—Workplace and Gender Relations (Form 2002GB) continues a line of research begun in 1988. In 1988 and 1995, the Defense Manpower Data Center (DMDC) conducted Joint Service surveys of active-duty members on sexual harassment/gender issues. The 1995 survey, *Status of the Armed Forces Surveys: Form B—Gender Issues*, was designed to both estimate the level of sexual harassment in the Services and provide new information on a variety of potential antecedents and consequences of harassment (Bastian, Lancaster, & Reyst, 1996). The new measures were intended to increase our understanding of sexual harassment and of policies and programs that prevent it from occurring.

- *Gender-Related Experiences in Military* – includes questions on the extent to which gender experiences were reported and, if reported, members' satisfaction with the complaint process and outcome.
- *Personnel Policy and Practices* – includes questions on the amount of training on sexual harassment, members' assessment of the effectiveness of training received, and Service members' views on current policies designed to prevent or reduce sexual harassment.

Volume 1 of the tabulations covers the first four sections of the survey; Volume 2 covers the remaining two sections of the survey.

Survey Methodology

Survey Design

The *2002 Status of the Armed Forces Surveys—Workplace and Gender Relations* (Form 2002GB) was designed to provide users with timely, policy-relevant information. A copy of the survey is provided in Appendix A. The survey was constructed around a core of questions grouped into six sections.

- *Background* – includes information on gender, race/ethnic status, education, duty status, Service, paygrade, and length of time in service.
- *Workplace Information* – includes questions on permanent duty station, supervisors, leadership, and coworkers.
- *Mentoring* – includes questions on use of mentors and their background and helpfulness.
- *Readiness, Health, and Well-Being* – includes questions on individual preparedness and physical and emotional health.

Sample Design

The population of inferential interest for *2002 Status of the Armed Forces Surveys—Workplace and Gender Relations* (Form 2002GB) consisted of all active duty members of the Army, Navy, Marine Corps, Air Force, and Coast Guard, up to and including paygrade O-6 with at least 6 months of service at the time the first questionnaire was mailed. The sampling frame included only those members who were on active duty in May 2001. Final eligibility was limited to those 1) who were in the December 2001 Active Duty Master File (ADMF) and 2) who were in the September 2001 Defense Enrollment Eligibility Reporting System (DEERS) Medical point-in-time (PIT) extract. Sampled members were flagged as ineligible (n=5,903; 9.8% of the sample) if they either were not in the December 2001 ADMF or were ineligible for benefits in the September 2001 DEERS PIT extract.

The initial sample for the Form 2002GB consisted of a non-proportional stratified, single stage random sample of 60,415 individuals, of whom 56,521 were determined to be eligible members of the population. The sample design considered requirements for analyses by Service, gender, paygrade group, and racial/ethnic group membership. Details of the sample design and expected precision levels are reported by George and Kroger (2003).

Survey Administration

The survey administration process began in December 2001, with the mailout of notification letters to all sample members (minus original ineligible). These letters informed members they had been selected to be in the sample and would be receiving a survey shortly. This letter and all subsequent letters gave an option to complete the survey on the Web. Three weeks later, sample members received a survey with a cover letter. Two weeks after the first survey mailing, reminder/thank-you letters were sent to all sample members. Two weeks after the reminder/thank-you letter mailing, a second survey with a new cover letter was mailed to each sample member who had not returned a survey (paper or Web). Four weeks after the second survey mailing, a third survey with a new cover letter was mailed to each sample member who had not returned a survey (paper or Web). The survey field closed on April 23, 2002. Completed surveys were received from 19,960 eligible members, which resulted in an eligibility-adjusted response rate of 36%.

Analytic Procedures

Estimation Procedures

The 2002 survey used a complex sample design that required weighting to produce population estimates such as percentages. The differential weighting means that some standard statistical software packages correctly compute standard errors, variances, or tests of statistical significance. For this report, variances were computed using WesVar,¹ a software application specifically designed to provide valid statistical variance estimates for complex surveys. WesVar uses replication methods for variance estimation.²

By definition, sample surveys are subject to sampling error. Standard errors are estimates of the random variation around population parameters such

² Replication is an empirical method of establishing sample variation by drawing repeated subsamples from the obtained sample and comparing results to those obtained for the full sample. This empirical calculation of variance borrows from the theory of sample variation by creating repeated samples to establish confidence intervals. Replication methodology produces variance estimates close to those produced using Taylor series linearization methodology, a theory-based method of variance estimation.

as percentages or means. These tabulations report percentages and their 95% confidence intervals.

Percentages in these tabulations are reported with Wilson confidence intervals, which are asymmetric (Wilson, 1927; Newcombe, 1988). Wilson confidence intervals have a lower bound of 0% and an upper bound of 100%. This restriction means that while the lower half of a symmetric confidence interval can go below 0%, the lower half of a Wilson confidence interval cannot. Likewise, while the upper half of a symmetric confidence interval can exceed 100%, using the standard approach, the Wilson method bounds the upper endpoint of the interval at 100%.

Subgroups

Survey results are tabulated in these reports for the Department of Defense as a whole and for subgroups defined by Service, paygrade, and respondent gender. Respondents were assigned to categories within subgroups primarily through answers provided on the survey. The members' administrative record data were used where survey response data were missing on a member's Service, paygrade, or gender.

Subgroups were constructed as follows:

- Service is defined by the response to Q6, "In what Service are you?" Observations are assigned to one of five categories: Army, Navy, Marine Corps, Air Force, or Coast Guard.
- Paygrade is based on Q7, "What is your current paygrade?" The original 20 categories are collapsed to five for analyses: E1-E4; E5-E9; W1-W5; O1-O3; and O4-O6.
- Gender is obtained from Q1, "Are you: (1) Male (2) Female," and is coded accordingly.

Constructed Variables

Tabulated results in these volumes generally present data for individual survey items. The exceptions are constructed scales for race/ethnicity and for incidence-rate variables. The race and ethnicity questions have been combined and are reported in accordance with the Standards for Maintaining, Collecting, and Presenting Federal Data on Race and Ethnicity (1997). The incident-rate measures have been created from 19 behaviorally-based survey items.

Historically, there have been dramatic differences in how the DoD and Service surveys of gender issues measure sexual harassment. The use of varying survey measures of sexual harassment led to inconsistent incident rates within the DoD. In November 1998, the Deputy Assistant Secretary of Defense for Equal Opportunity (DASD (EO)) convened a meeting of Service and Reserve Component representatives to review existing measures and make recommendations for a standardized method for use in both Service-wide and DoD-wide surveys. The resulting measure is based on two survey questions which represent the “DoD Sexual Harassment Core Measure.”

The first question in the core sexual harassment measure is Question 55 on Form 2002GB. It lists 19 behaviors that cover a broad spectrum of situations potentially considered harassment—from telling dirty or offensive jokes, for example, to more egregious incidents, such as sexual assault. The question asks respondents to indicate how often they had been in situations involving these behaviors with the response categories of a five-point frequency scale ranging from “Never” to “Very often.” While the list is comprehensive in scope, treating the measures as individual items is not practical for analytic purposes. Factor analyses were conducted to collapse the 19 items into scales. This effort resulted in five major categories:

- Crude/Offensive Behaviors (items 55a, c, e, f);
- Sexist Behaviors (items 55b, d, g, i);
- Unwanted Sexual Attention (items 55h, j, m, n);
- Sexual Coercion (items 55k, l, o, p); and
- Sexual Assault (items 55q, r).

Question 56, the other question in the core sexual harassment measure, asks respondents to indicate whether they considered the behaviors to be sexual harassment (i.e., none, some, all). This latter question was used in calculating the incident rate for overall sexual harassment.

Data Suppression

Unstable estimates resulting from a small number of observations or from large variance in the data or weights were suppressed or annotated. The following rules were used:

- A cell estimate (reported as a percentage) was not published if the unweighted size of the denominator in that cell was less than 30. These cells are annotated “NR” (Not Reported).

- A cell estimate (reported as a percentage) was published with an asterisk if the unweighted cell size of the denominator was 30 to 59.
- A cell estimate was published with an asterisk if the relative standard error for that estimate was greater than 30%.

Table 55d.1***Frequency of Treating Member Differently Because of Gender: By Service***

55d. In this question you are asked about sex/gender related talk and/or behavior that was unwanted, uninvited, and in which you did not participate willingly. How often during the past 12 months have you been in situations involving Military Personnel on- or off-duty, on- or off-installation or ship; and/or Civilian Employees and/or Contractors in your workplace or on your installation/ship where one or more of these individuals (of either gender) . . . Treated you "differently" because of your gender (for example, mistreated, slighted, or ignored you)?

551. In this question you are asked about sex/gender related talk and/or behavior that was unwanted, uninvited, and in which you did not participate willingly. How often during the past 12 months have you been in situations involving Military Personnel on- or off-duty, on- or off-installation or ship; and/or Civilian Employees and/or Contractors in your workplace or on your installation/ship where one or more of these individuals (of either gender) . . . Made you feel threatened with some sort of retaliation for not being sexually cooperative (for example, by mentioning an upcoming review)?

Table 57s.4***Members Who Said That Situation With Greatest Effect Included Other Unwanted Gender-Related Behavior: By Gender Within Paygrade***

57s. Think about the situation(s) you experienced during the past 12 months that involved the behaviors you marked in Question 55. Now pick the SITUATION THAT HAD THE GREATEST EFFECT ON YOU. What did the person(s) do during this situation? Other unwanted gender-related behavior

If you mark "Did this," please describe below.
