APPN 2032 ICN HO6102 (Army)  
APPN 2032 ICN HO6300 (Army)

5. (U) Related Programs: None.

6. (U) Mission and Description:

The Javelin (AAWS-M) is a manportable antitank weapon system designed to provide high lethality against advanced armor and is envisioned as a simple-to-operate, easily and economically maintained, rugged and reliable infantry system for the U.S. Army and U.S. Marine Corps (USMC). The Javelin is comprised of two major components: a reusable Command and Launch Unit (CLU) and a missile sealed in a disposable launcher container. The CLU incorporates an integrated day/night sight and provides target engagement capability in adverse weather. The CLU may be used in stand alone mode for battlefield surveillance and target detection. For operation of the system, the round must be mated with the CLU. The CLU will provide a go/no-go status of the CLU and round. The missile, with a warhead designed against both conventional and reactive armor, may be used at the gunner's discretion in top attack or direct fire mode. Top attack is the normal mode of operation and direct fire mode is for engaging targets under cover. The Javelin will replace the DRAGON.

7. (U) Program Highlights:

a. (U) Significant Historical Developments --  
The Milestone Decision Review I (MDR I)/Defense System Acquisition Review Council (DSARC) review process was completed with the issue of the Secretary of Defense Decision Memorandum (SDDM) on 15 May 86 authorizing the Advanced Antitank Weapon System - Medium (AAWS-M) and the AAWS-Heavy entry into the Proof of Principle (POP) phase. Three AAWS-M POP contracts, \$30 million each for a period of performance of 27 months, were awarded on 28 Aug 86 to Ford Aerospace and Communications Corporation, Hughes Aircraft Company, and Texas Instruments, Incorporated.

Following successful completion of the POP program by all three contractors, the Full Scale Development (FSD)/Low Rate Initial Production (LRIP) Request For Proposal (RFP) was released on 6 Sep 88, and the proposals were received on 7 Nov 88. On 9 Feb 89, the Army announced that the Texas Instruments and Martin Marietta Imaging Infrared Fire-&-Forget (IIR F&F) technology was selected for the FSD/LRIP contract award, contingent upon Department of Army (DA) and Office of Secretary of Defense (OSD) program approval. The Under Secretary of the Army Acquisition Decision Memorandum, dated 17 Mar

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

Javelin (AAWS-M), December 31, 1995

7a. (U) Program Highlights (Cont'd):

89, authorized the AAWS-M to proceed into the FSD phase, subject to Defense Acquisition Board (DAB) review. The Secretary of Defense Acquisition Decision Memorandum (ADM) was issued on 19 Jun 89 approving entry into the FSD phase. A contract was awarded to a Texas Instruments/Martin Marietta Joint Venture on 21 Jun 89.

Javelin was selected as the popular name for the AAWS-M Weapon System requirements. A DAB review was held 5 Dec 90 which approved a change to the Acquisition Program Baseline (APB), increasing the system weight threshold to 49.5 pounds. As a result of cost growth and technical performance problems related to the extensive effort to maintain the success-oriented 36 month schedule, the Baseline Test directed by OSD exacerbating an already demanding (compressed) test schedule, Focal Plane Array (FPA) performance growth being slower than anticipated and weight reduction efforts being more difficult than expected, the Army Acquisition Executive (AAE) and the Defense Acquisition Executive (DAE) approved a restructured 54-month Engineering and Manufacturing Development (EMD) phase.

All Engineering and Manufacturing Development (EMD) testing (both developmental and operational with two minor exceptions) was completed in Dec 93.

A fixed price incentive, Low Rate Initial Production (LRIP) I contract was awarded 23 Jun 94 to TI/Martin Javelin Joint Venture in the amount of \$204.1 M.

As a result of the 20 Jun 94 Defense Acquisition Board (DAB) review, the Army was directed to submit a Cost Reduction Plan (CRP) to OSD by 1 Sep 94 and to add an LRIP III to provide time to complete development of the new warhead. On 31 Aug 94 the Cost Reduction Plan (CRP) was approved by the Army Acquisition Executive (AAE) and forwarded to OSD. The CRP will be executed with the currently programmed funds and will significantly reduce the cost of the Javelin.

On 22 Dec 94 a letter contract was definitized which continues alternate warhead development and the Enhanced Producibility Program (EPP) I was implemented during the fourth Qtr CY 94. On 7 Feb 1995, the proposed Acquisition Program Baseline (APB) incorporating an 11 year program with full cost and quantity reductions was approved.

b. (U) Significant Developments Since Last Report --

A fixed price incentive (with a cost plus incentive fee provision for Interim Contractor Support) contract for Low Rate Initial Production II (LRIP II) was awarded on 9 Mar 95. In Aug 95 production of the low cost Missile Simulation Round (MSR) was begun at the Ft. Benning, GA Training Support Center. The rollout ceremony

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

Javelin (AAWS-M), December 31, 1995

7b. (U) Program Highlights (Cont'd):

for the first Javelin production round was held 29 Sep 95 at the Lockheed Martin Pike County Operations Plant which is located in Troy, AL. In addition, one Command Launch Unit (CLU) was integrated, tested and accepted in time for the rollout ceremony.

Javelin (AAWS-M) is expected to satisfy mission requirements.

c. (U) Changes Since As Of Date -- None.

8. (U) Threshold Breaches:

There is a schedule breach of more than six months to the approved Acquisition Program Baseline (APB) dated 7 Feb 95. A PDR and an APB change request will be submitted. There are no Nunn-McCurdy unit cost breaches.

9. (U) Schedule:

b. (U) Previous Change Explanations --

Combination of delayed hardware deliveries and delay in obtaining safety certification for man firing of missiles during tests delayed Training FDT&E start and stop dates. Initial Operational Test and Evaluation (IOT&E) start defined as start of actual test not start of training of personnel to perform test. IOT&E complete estimate revised by Operational Evaluation Command (OEC). On 27 Sep 91 an Acquisition Decision Memorandum (ADM) was approved which changed the Javelin Engineering and Manufacturing Development (EMD) phase from a 36-month schedule to 54-month schedule. Consolidated Long Lead Time Item (LLTI) and Low Rate Initial Production (LRIP) II procurement actions into a single contract. Contract award changed from Jul 95 to Jan 95. Milestone IIIB date changed from Jul 96 to Jan 96 and Full Rate Production (FRP) Contract Award changed from Jul 97 to Jan 97. Dates rescheduled for consistency with previous change rescheduling LRIP II contract award. Schedule milestone changes are a result of extending Low Rate Initial Production (LRIP) an additional year as directed by the Defense Acquisition Board's (DAB) Acquisition Decision Memorandum (ADM) dated 11 Jul 94. On 7 Feb 1995, an Acquisition Program Baseline (APB) incorporating an 11 year

\*\*\* ~~CONFIDENTIAL~~ \*\*\*

10a. ~~(S)~~ Performance Characteristics (Cont'd):

1. (U) Minimum range (Full) and maximum range. Full lethality must be met at this range.
2. (U) Probability of hit given a reliable round (Ph/reliable round). Hit probabilities are specified for 7 km visibility (day/night) in benign environments. Must hit a fully exposed standard NATO target (2.3m H x 2.3m W x 4.6m L) stationary or moving (crossing velocity up to 20 km/hr) at all ranges (min to max). The hit probability must be attained given any attack azimuth or elevation angle (relative to target) given a shot with a reliable system.

ACRONYMS:

FO - Fog Oil  
WP - White Phosphorous  
MTBOMF - Mean Time Between Operational Mission Failures.  
MTTR - Mean Time To Repair.  
IOT&E - Initial Operational Test and Evaluation.

b. (U) Previous Change Explanations --

As a result of the 5 Dec 90 DAB, a revised APB was approved increasing the system weight threshold to 49.5 pounds. Current estimate values are projected performance at the Full Rate Production ASARC and were updated following completion of Engineering Manufacturing Development (EMD) testing. Missile operational reliability and Command Launch Unit (CLU) MTBOMF current estimates include incorporation of corrective actions to problems identified during IOT&E.

| b. (U) Quantity --  |              |              |              |
| Development (RDT&E) | 81           | 48           | 48           |
| Procurement         | <u>70550</u> | <u>31269</u> | <u>31269</u> |
| Total               | 70631        | 31317        | 31317        |

Note: Excludes 165 RDTE prototypes from the SAR Baseline and 154 from the Current Estimate that are not considered fully configured.

A system is comprised of rounds, CLUs, associated training devices and initial spares with the round the designated end item. Of the total procurement quantity shown above, 2585 rounds (FY94-703, FY95-872, and FY96-557) or 6.8% will be produced during Low Rate Initial Production (LRIP). Congressional increase of \$35.5M in FY 96 allowed the quantity to change from 557 to 1010 rounds with an accompanying increase of CLUs and associated training devices.

c. (U) Foreign Military Sales/International Cooperative Programs -- None.

b. (U) Previous Change Explanations --

RDT&E

Economic: revised escalation indices.  
Schedule: revised development schedule from 36 to 54 months.  
Engineering: revised test plan; increased cost for additional alternate warhead program; added funding to continue alternate warhead integration.  
Estimating: adjustment for current and prior year inflation; revised estimate due to technology selection; revised estimate to reflect actual costs; lower subcontractor cost; revised subcontractor estimates; program reduced to obligated amount to close accounts in prior years; increased contractor estimate due to higher overhead rates

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

Javelin (AAWS-M), December 31, 1995

13b. (U) Cost Variance Analysis (Cont'd):

resulting from reduced business base and slow manpower reductions following completion of EMD.

Procurement

Economic: revised escalation indices; adjustment for negative program change.

Quantity: decrease of 4065 rounds (USMC); reduction of 2062 CLUs from 5917 to 3855; reduction of 32874 rounds from 66485 to 33611 (Army and USMC); reduction of 591 CLUs from 1055 to 464 (USMC); reduction of 2342 rounds from 7011 to 4669 (USMC).

Schedule: revised delivery schedules; restructured program delayed procurement 1 year; revised USMC delivery schedule; revised procurement buy schedule; change in procurement buy schedule related to CLU; change in procurement buy schedule related to rounds.

Engineering: add Built In Test Equipment (BITE) to CLU; allocation resulting from quantity decrease.

Estimating: revised trainer cost and refined missile cost; revised hardware unit costs; revised subcontractor cost (round, CLU and trainers); correction of SAR variances to reconcile flyaway and support cost; adjustment for current and prior inflation; revised subcontractor estimates; allocation resulting from quantity decrease; revised contractor/subcontractor estimates based on LRIP I proposal; decrease due to cost reduction program.

Support: additional costs due to revised delivery schedule; increased support due to higher hardware cost; correction of SAR variances to reconcile flyaway and support cost; additional support cost due to revised delivery schedule; increase in trainer cost; added Interim Contractor Support; higher Depot Maintenance Plant Equipment cost; higher Program Management cost; decreased CLU, round and training devices requirement due to quantity reduction; adjustment for current and prior inflation; decrease due to change in maintenance concept to Life Cycle Contractor Support and decreased CLU and round requirement due to quantity reduction.

15. (U) Contract Information (Cont'd):

|   | <u>Cost Variance</u> | <u>Schedule Variance</u> |
|---|----------------------|--------------------------|
| Previous Cumulative Variances           | N/A                  | N/A                      |
| Cumulative Variances To Date (12/31/95) | \$1.7                | \$-0.4                   |
| Net Change                              | \$1.7                | \$-0.4                   |

Explanation of Change:

The unfavorable schedule variance is related to the missile and contractor support for Interim Contractor Support (ICS). The favorable cost variance is related to the missile, CLU basic sight, System Engineering/Project Management and contractor support for ICS.

Contract estimated prices do not include Initial Contractor Support.

16. (U) Program Funding Summary (Current Estimate in Millions of Dollars):

a. (U) Program Status --

- (1) Percent Program Completed: 64.7% (11 yrs/17 yrs)
- (2) Percent Program Cost Appropriated: 36.1% (\$1381.1 / \$3826.2)

b. (U) Appropriation Summary (Then-Year Dollars in Millions)

17. (U) Production Rate Data:

- a. (U) Deliveries to Date --
- |             |                    |
|-------------|--------------------|
|             | <u>Plan/Actual</u> |
| RDT&E       | 202/202            |
| Procurement | 13/13              |
- b. (U) Approved Design-to-Cost Objective -- N/A.

18. (U) Operating and Support Costs:

- a. (U) Assumptions and Ground Rules --

The Javelin system support concept is consistent with existing Army policy as follows:

(1) Command Launch Unit (CLU) is a 3 level organic support concept. Unit level is responsible for visual inspection, exterior cleaning, battery replacement and troubleshooting thru the Built In Test (BIT) capability. Removal/replacement of components will be accomplished at the Direct Support (DS) level. Depot level capability will exist for complete overhaul/repair of the unit.

(2) Maintenance of the round is a "wooden round" concept.

(3) Contractor Logistics Support (CLS) of training devices will be used for the life of the system.

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

Javelin (AAWS-M), December 31, 1995

18a. (U) Operating and Support Costs (Cont'd):

Interim Contractor Support (ICS) for supply support and maintenance above unit level will be utilized for the first 60 months. CLU repair will consist of complete repair of the CLU's economically repairable circuit cards, assemblies, and components. Missile repair (resulting from surveillance checks) will be performed by the system's prime contractor.

Fielding begins in Jun 96. Sustainment covers 20 (full deployment) years of operation, maintenance, and modification. Military pay and allowances represent over 59% of the sustainment program costs not including contractor support costs. Sustainment for the antecedent system, DRAGON, covers 33 (full deployment) years of operation, maintenance, and modification.

Personnel costs cover military pay and allowances less costs associated with permanent change of station (PCS). O & S consumables consist of petroleum, oil, and lubricants plus ammunition/missiles (training ammo/missiles and war reserve). Direct depot maintenance consists of civilian labor, material, transportation, sustainment of training devices, system software maintenance, and training devices software maintenance. Sustaining investment includes repair parts (including war reserve), spares (including war reserve), modifications/kits, and software upgrades. Other direct costs include field maintenance civilian labor, system specific replacement training, quarters, maintenance, and utilities. Indirect cost consists of costs of PCS, system project management, stockpile reliability, and other O & M and MIPA funded items less training device software maintenance and software upgrades.

\*\*\* UNCLASSIFIED \*\*\*

MMIII GRP - Phase 1, December 31, 1995

6. (U) Mission and Description:

The Guidance Replacement Program (GRP) upgrades and extends the life of the Minuteman III guidance system through the year 2020. As a result of various arms control initiatives, the Minuteman III is projected to become the only land-based ICBM in the Triad when Minuteman II and Peacekeeper are retired. The guidance electronics will be replaced since current electronic components continue to degrade and are projected to become unreliable as early as 1997 and unsupportable as early as 1998. GRP replaces 1960's guidance system electronics and protects the option for future implementation of the Mark 21 RV/W87 warhead and an advanced inertial measurement unit (IMU), if required.

7. (U) Program Highlights:

a. (U) Significant Historical Developments --

In Jul 92, a report was sent to Congress defining the replacement of the Minuteman III Guidance System. Based on this report, the Joint Requirements Oversight Council (JROC) in Nov 92, validated a Mission Need Statement (MNS) for a future MM III Guidance System. In Aug 93, the Air Force Systems Acquisition Review Council (AFSARC) approved the GRP Milestone I/II and in Aug 93 the Engineering and Manufacturing Development (EMD) contract was awarded to Rockwell International. Fact of life changes in the program resulted in a new Acquisition Program Baseline (APB) in May 94. In turn, the Preliminary Design Review (PDR) changed from Sep 94 to Aug 95 and the Critical Design Review (CDR) changed from Sep 95 to May 96. These deviations did not impact program executability or the ability to satisfy First Asset Delivery (FAD). In Feb 94, the program conducted a successful System Design Review (SDR) which defined the baseline design, fabrication, and support concepts and provided viable, cost effective solutions to satisfy program requirements. In Dec 94 the Interim Design Review (IDR) approved the Engineering Model (EM) baseline design. The program was restructured in FY95 due to budget reductions (not technical performance), and a new Acquisition Program Baseline (APB) was approved 12 July 1995. There were some changes to program milestone dates but these changes did not change the program's content.

b. (U) Significant Developments Since Last Report --

The Government/Rockwell Guidance Replacement Program (GRP) Team conducted an integrated technical-financial baseline review and established an agreed-to program estimate at completion (EAC). The EAC currently reflects a program growth of \$18M over the target cost. (Six Million dollars of Government directed work is expected to lower the program growth to \$12M.) The program growth is due to additional effort required to improve Life Cycle Cost (LCC), overcome technical problems and address potential future technical risks. This expected cost growth will be managed within existing program funded baseline.

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

MMXII GRP - Phase 1, December 31, 1995

7b. (U) Program Highlights (Cont'd):

The program fabricated several production quality Missile Guidance Computer (MGC), Missile Guidance Set Control (MGSC), and modified the Gyro Stabilized Platform (GSP) Engineering Models (EMs). Integrated testing of the EMs has continued using prototypes of Operational Ground Program (OGP) and Operational Flight Program (OFF) software. The majority of EM missile guidance set control (MGSC) test software has been coded.

All EM Guided Missile Set Control Test Stations (GMSCTS) and Gyro Test Stations (GTS) have been fabricated and support Aerospace Vehicle Equipment (AVE) integration testing.

The Trainer Integrated Product Team (IPT) conducted the final pre-modification functional test on the Control Monitor Procedures Trainer (CMPT) on 8 Dec 95.

The GRP Codes Critical Design Review (CDR) was conducted 14 Dec 95. All Requests for Actions (RFAs) were closed by 18 Dec 95.

An AVE Preliminary Design Review (PDR) was conducted 20 Dec 95. The PDR resulted in 3 category A RFAs. The AVE PDR was closed 20 Feb 96 consistent with the Acquisition Program Baseline (APB). The AVE Missile Guidance Computer (MGC) Engineering Model #2 was sold off at Honeywell and EM #3 has progressed on schedule.

The Mod 7 Telemetry wafer upgrade EM modules are in fabrication. The GRP Test Evaluation Master Plan (TEMP) is being updated and will be approved by Apr 96.

The Program is expected to satisfy all mission requirements.

c. (U) Changes Since As Of Date --

Estimated program costs were reduced to accommodate directed budget reductions. PBD 604 reduced the GRP budget profile due to revised inflation prior to release of official OSD inflation indices. When the inflation indices used in this SAR were applied to the post PBD 604 budget profile, the GRP production base year funding profile (BYF) reflects an artificial increase of \$11.6M in program growth, unrelated to program content adjustments.

8. (U) Threshold Breaches:

There are no breaches to the approved AFAP Acquisition Program Baseline (APB) dated 12 Jul 95, and no Runn-McCurdy unit cost breaches.

b. (U) Previous Change Explanations --

RDT&E

Economic: Revised inflation indices.

Schedule: Schedule stretch due to production funding cut in FY 97 (Maintain RMD critical skills base for production requirements).

Engineering: Descope of Global Positioning System (GPS) feature from GRP and limited development of memory sizing/timing through PDR for both Advanced Inertial Measurement System (AIMS) and MK21.

Estimating: Adjustments for program requirements currently under service review.

Revised estimate due to miscellaneous program funding adjustments. Increased Integration

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

MMIII GRP - Phase 1, December 31, 1995

13b. (U) Cost Variance Analysis (Cont'd):

Demonstration Flight (IDF) costs associated with increased test range costs. Adjustments reflect rephased program schedule. Increased Strategic Missile Integration Complex (SMIC) test equipment costs due to present configuration problems.

Procurement

Economic: Economic Adjustment for Negative Program Change. Revised escalation indices.

Schedule: Change in annual procurement buy profile. Procurement buy moved from FY96 to FY97. Schedule change due to program restructure.

Estimating: Adjustments for program requirements currently under service review. Adjustments were made to reflect changes in the buy schedule and to reflect restoration of funds.

Support: Initial Spares- increased due to higher Aerospace Vehicle Equipment (AVE) cost estimates. Peculiar Support Equipment-Cost decreased due to contractor decision to modify (rather than procure) less support equipment at a lower cost. Other Weapons Systems- Cost increased due to more detailed logistical support analysis of optimal trainer requirements.

15. (U) Contract Information (Then-Year Dollars in Millions):

a. (U) RDT&E --

(U) MMIII GRP - Electronics:  
Rockwell International, Anaheim, CA  
F04704-93-C-0020, CPAP  
Award: August 31, 1993  
Definitized: August 31, 1993

| Initial Contract Price |         |     |
|------------------------|---------|-----|
| Target                 | Ceiling | Qty |
| \$253.2                | N/A     | 0   |

| Current Contract Price |         |     | Estimated Price At Completion |                 |
|------------------------|---------|-----|-------------------------------|-----------------|
| Target                 | Ceiling | Qty | Contractor                    | Program Manager |
| \$326.5                | N/A     | 0   | \$350.7                       | \$350.7         |

|   | Cost Variance | Schedule Variance |
|---|---------------|-------------------|
| Previous Cumulative Variances           | \$-4.5        | \$-2.4            |
| Cumulative Variances To Date (01/31/96) | \$-8.4        | \$-2.9            |
| Net Change                              | \$-3.9        | \$-0.5            |

Explanation of Change:

The net change of \$-3.9M in cost variance is due to the additional effort to design the Operational Model (OM) circuit module. There was additional effort required to redesign the OM Missile Guidance Set Control (MGSC). The material costs in the Guidance Replacement Program (GRP) Data Acquisition System (GDAS) were higher than

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

MMIII GRP - Phase 1, December 31, 1995

15. (U) Contract Information (Cont'd):

planned. There was additional effort required to checkout the Guided Missile Set Control Test Station (GMSCTS) engineering module (EM).

The net change of \$-0.5M in schedule variance is due to slow progress in the Missile Guidance Control (MGC) area due to module rework.

16. (U) Program Funding Summary (Current Estimate in Millions of Dollars):

a. (U) Program Status --

MCIII GRP - Phase 1, December 31, 1995

17. (U) Production Rate Data:

- a. (U) Deliveries to Date -- 0/0.
- b. (U) Approved Design-to-Cost Objective -- N/A.

18. (U) Operating and Support Costs:

a. (U) Assumptions and Ground Rules --

The concept of operations is based on 500 deployed guidance systems which operate continuously. This is a modification to the current guidance system. As such Operating and Support (O&S) costs are not new. Calculations are based on historical guidance repair data, which has varied little since Minuteman III was fielded in the early 1970s. Personnel costs are based on the current manning levels associated with guidance system repair. These levels will not change because maintenance personnel have multiple tasks and qualifications that drive overall manning requirements. Repair costs are calculated as the number of projected annual repairs, multiplied by the unit repair cost. Unit level consumption costs are based on costs associated with deployment of missile wing personnel to missile sites to remove and replace guidance systems, and the annual user costs associated with maintaining guidance related maintenance support equipment. Repair and unit level consumption costs will decrease as a result of this modification. The increase in reliability of the electronics will result in fewer guidance system repairs and fewer maintenance actions by field personnel. NOTE: The calculated costs to repair the guidance set compares system level Missile Guidance System (MGS) repair. O&S data was extracted from the routine program office estimate dated Aug 95.

b. (U) Costs -- (FY 1993 Constant (Base-Year) Dollars in Millions)

| Cost Element           | Avg Annual Cost Per<br>Year-Antecedent<br>System | Avg Annual Cost Per<br>Year-Current<br>System |
|------------------------|--|---|
| Personnel              | 3.5  | 3.5   |
| Repair Costs           | 16.8   | 24.4  |
| Unit Level Consumption | 4.1  | 4.5   |
| Total                  | 24.4   | 32.4  |

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

MXIII GRP - Phase 1, December 31, 1995

18c. (U) Operating and Support Costs (Cont'd):

c. (U) Contractor Support Costs -- (Current (Then-Year) Dollars  
in Millions)

| Funding | FY1995<br>& Prior | FY1996 | FY1997 | Balance<br>To<br>Complete | Total |
|---------|-------------------|--------|--------|---------------------------|-------|
| O&M     | ---               | ---    | ---    | 432.4                     | 432.4 |
| Total   | ---               | ---    | ---    | 432.4                     | 432.4 |

Contractor support costs reflect those sustaining engineering costs that are associated with support of the Missile Guidance System (MGS) to the year 2020. Costs also include the effort estimated to be required for software changes to associated guidance depot support equipment. Estimates assume O&S costs will not occur until the Guidance Replacement Program (GRP) deploys assets in FY98.

4. Program Elements/Procurement Line Items (Cont'd):

Procurement includes 0207583F (3020) and Appropriation 1507N, ICN 0550. Air Force and Navy Procurement funding does not include PIP funding. Navy Procurement funding includes BLU-109 but not Joint Programmable Fuse.

5. Related Programs:

Joint Programmable Fuse (JPF), Joint Stand-Off Weapon (JSOW), Joint Air-to-Surface Standoff Missile (JASSM), Wind Corrected Munitions Dispenser (WCMD), DSU-33 (Air Force Only), B-1B, B-2, FA-18C/D, F-22A, F-16C/D, F-15E, B-52H, F-117A, F-14A/B/D, FA-18E/F, P-3, S-3, and AV-8B.

6. Mission and Description:

The Air Force and Navy do not intend for the Joint Direct Attack Munition (JDAM) to replace any existing weapon system. Operation DESERT STORM confirmed the need for a more accurate weapon delivery capability in adverse weather conditions and from medium/high altitudes. Failure to satisfy this requirement will allow the enemy to continue to take advantage of the sanctuary of weather and/or prevent United States air power from prosecuting a conflict on its terms. The JDAM is an Air Force and Navy munitions program to correct these shortfalls, with the Air Force as the Executive Service. JDAM will upgrade the existing general purpose bombs (MK-84, BLU-109/B, and MK-83/BLU-110) by integrating them with a tail guidance kit consisting of an Inertial Navigation System (INS) aided by a Global Positioning System (GPS). JDAM will provide an accurate (13 meters) adverse weather capability. The primary platforms for the JDAM development are the B-1B, B-2, B-52H, FA-18C/D and the F-22A (for the MK-83/BLU-110 only). The services will certify other aircraft (e.g. F-16C/D, F-14D, F-15E, FA-18E/F, S-3, P-3, AV-8B) to deliver JDAM when funding becomes available. The JDAM Product Improvement Program (PIP) will field improvements to the JDAM system.

7. Program Highlights:

a. Significant Historical Developments --

The Joint Requirements Oversight Council (JROC) approved the Mission Need Statement (TAF-401-91) on 5 March 1992. A Milestone (MS) 0 Defense Acquisition Board (DAB) met on 8 June 1992 and directed planning for the basic Joint Direct Attack Munition (JDAM) program for a MS I/II DAB review and directed JDAM 3 planning for MS I. A modified MS I DAB review was successfully completed 1 October 1993. JDAM 3 was redesignated as a Product Improvement Program (PIP) in November 1993 to concurrently conduct risk reduction efforts toward providing a precision capability to the basic JDAM. The MS I Acquisition Decision Memorandum (ADM) was signed 1 December 1993.

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

JDAM, December 31, 1995

**7a. Program Highlights (Cont'd):**

The JDAM Engineering and Manufacturing Development (EMD) Phase I contracts were awarded 11 April 1994 to Martin Marietta and McDonnell Douglas.

JDAM initiated the Exploitation of Differential GPS Guidance Enhancement (EDGE) program in June 1994 to demonstrate the potential of wide area differential Global Positioning System (GPS) as a way to improve JDAM's accuracy. The demonstration program was successful.

The Federal Acquisition Streamlining Act (FASTA) of October 1994 designated the JDAM program as a Defense Acquisition Pilot Program. DUSD(AR) selected the JDAM program to implement pay-for-performance as a pilot project in accordance with FASTA.

In July 1995, USD(A&T) approved an acceleration of the JDAM Baseline program.

USD(A&T) signed the Milestone I JDAM Acquisition Program Baseline (APB) and Acquisition Strategy Report (ASR) on 11 July 1995.

The Joint Operational Requirements Document (ORD) was updated and signed on 23 August 1995 and the Joint Requirements Oversight Council (JROC) validated the Key Performance Parameters (KPP) on 30 August 1995.

Milestone II approval was provided at the Defense Acquisition Board (DAB) Readiness Review on 6 September 1995 --JDAM's Single Acquisition Management Plan (SAMP) was adopted. The Milestone II Acquisition Decision Memorandum (ADM) was signed on 20 September 1995.

Milestone I for the JDAM Product Improvement Program (PIP) slipped more than six months, from April 1998 to September 1999, due to the revised schedule in the Acquisition Program Baseline (APB) approved by USD(A&T) on 20 September 1995.

**b. Significant Developments Since Last Report --**

The Acquisition Decision Memorandum (ADM) signed 20 September 1995 allowed the Air Force and Navy to buy the maximum number of kits supported by the authorized and appropriated budget.

On 11 October 1995, an Engineering and Manufacturing Development (EMD) Phase II contract option was awarded to McDonnell Douglas. The Average Unit Procurement Price (AUPP) objective for 40,000 units proposed by the contractor was \$13,847 (FY93\$), substantially lower than the \$40,000 (FY91\$) or \$42,240 (FY93\$) cost goal in the Joint

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

JDAM, December 31, 1995

7b. Program Highlights (Cont'd):

Operational Requirements Document (ORD). The program is proceeding well.

This will be our final report on the Martin Marietta and McDonnell Douglas JDAM Engineering and Manufacturing Development (EMD) Phase I contracts since they are more than 90 percent complete.

Program funding for adapting terminal seeker technologies was deleted from the Product Improvement Program (PIP) during the FY97 budget cycle. Adapting seekers for terminal guidance is the only known technical approach for achieving 3 meter Circular Error Probability (CEP). The PIP Milestone I scheduled in the Acquisition Program Baseline (APB) for September 1999 was to approve further seeker development. The programmatic change in PIP funding will necessarily delay or entirely defer this milestone.

Engineering and Manufacturing Development (EMD) testing for baseline JDAM is on track. The contractor has started delivering JDAM Separation Test Vehicles which the Air Force and Navy are using to conduct ground, captive, and separation testing on the B-1B, B-2, and FA-18C/D. The contractor has also delivered Weapons Simulators to the B-2, B-1B, and F-16C/D. These are currently being integrated into the aircraft Software Integration Laboratories.

The program is expected to satisfy all mission requirements.

c. Changes Since As Of Date -- None.

8. Threshold Breaches:

There is a schedule and performance breach to the approved Defense Acquisition Executive (DAE) Acquisition Program Baseline (APB) dated 20 September 1995, but no Munn-McCurdy unit cost breaches.

The JDAM Product Improvement Program (PIP) funding for adapting terminal seekers was deleted during the FY97 budget cycle. While baseline improvements to the Global Positioning System (GPS) receiver, target location errors and guidance system will improve JDAM accuracy, terminal seekers are the only known technical approach to achieving a 3 meter Circular Error Probability (CEP). A 3 meter CEP is a Key Performance Parameter (KPP) for the PIP. This programmatic change in PIP funding will necessarily delay or defer entirely the Milestone I date of September 1999. The PIP Milestone I date is an Acquisition Program Baseline (APB) milestone.

A program deviation report was submitted to AFPEO/WP February 1996. Resolution of the PIP 3 meter Key Performance Parameter (KPP) will be pursued through the joint requirements process and a baseline change

ACRONYMS: AUR - All Up Round

LRIP - Low Rate Initial Production

RAA - Required Assets Availability

b. Previous Change Explanations --

Required Assets Availability (RAA) and Milestone I JDAM PIP milestones were added and are considered to be significant milestones by the program office.

Milestone II date changed from October 1995 to September 1995 to reflect the actual date of the Milestone II Program Review.

Milestone I - JDAM PIP slipped by more than six months from April 1998 to September 1999 due to the revised schedule approved by USD(A&T) on 20 September 1995.

c. Current Change Explanations --

(Ch-1) The following milestones were deleted in the Milestone II Acquisition Program Baseline (APB) dated 20 September 1995 and will not be carried forward as part of the Development Estimate. They are reflected here for transitional purposes only and will not be shown in future SARs.

- Production Readiness Review #1, First Guided Flight, Production Readiness Review #2, Exercise LRIP-1 Option, LRIP-2 Contract Award, LRIP-1 Production First Delivery, and Milestone III were deleted.

(Ch-2) The following milestones and dates were changed/added to reflect the approved accelerated JDAM program and the approved Acquisition Program Baseline (APB) dated 20 September 1995 that supports the Milestone II Defense Acquisition Board (DAB).

- DT&E/TECHEVAL Start (Flight Tests) changed from October 1995 to December 1995. DT&E/TECHEVAL started in October 1995 and flight tests started in December 1995. DT&E/TECHEVAL Complete (2000 lb Kit) changed from May 1998 to October 1997. IOT&E/OPEVAL Complete (2000 lb Kit) changed from February 1999 to December 1997. Exercise Lot 1

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

JDAM, December 31, 1995

9c. Schedule (Cont'd):

Option, Exercise Lot 2 Option (FRP), Lot 1 Production First Delivery, Milestone III (2000 lb)/LRIP (1000 lb), and Milestone III (1000 lb on F-22) were added.

(Ch-3) DT&E/TECHEVAL Complete (1000 lb Kit) was deleted because the F-22A was not available to support as a threshold aircraft. This milestone is not included in the Milestone II Acquisition Program Baseline (APB) and will not be carried forward as part of the Development Estimate.

(Ch-4) DT&E/TECHEVAL Complete (1000 lb Kit) - Weapon Only was added to reflect DT&E/TECHEVAL for 1000 lb Kit on F-16C/D.

(Ch-5) Operational Assessment Complete changed from June 1997 to March 1997 to support accelerated Lot 1 Production go-ahead decision.

(Ch-6) IOT&E/OPEVAL Start changed from April 1997 to September 1997 due to a change in the threshold bomber from B-1B to B-52H, and increased combined DT&E/OT&E program.

(Ch-7) OT&E/OPEVAL Complete (1000 lb Kit/F-22) changed from September 2001 to May 2001 to reflect updated schedule from F-22A SPO.

(Ch-8) Organisational Organic Support Capability was deleted because it is not required at the organizational level (O-level) except for assembly and Built-In-Test (BIT)/Reprogramming with Common Munition Built-In-Test and Reprogramming Equipment (CMBRE) or Common Field Memory Reprogramming Equipment (CFMRE). This milestone is not included in the Milestone II Acquisition Program Baseline (APB) and will not be carried forward as part of the Development Estimate.

(Ch-9) The following milestone requirements were deleted due to the 20 year warranty. The 20 year extended maintenance repair warranty begins with Lot 1 and will cover any repairs required. This milestone is not included in the Milestone II Acquisition Program Baseline (APB) and will not be carried forward as part of the Development Estimate.

- AUR Depot Support Capability was deleted.

- Component Depot Support Capability requirement was deleted.

(Ch-10) Required Assets Availability (RAA) was deleted because RAA is only applicable to the Air Force. This milestone is not included in the Milestone II Acquisition Program Baseline (APB) and will not

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

JDAM, December 31, 1995

9c. Schedule (Cont'd):

be carried forward as part of the Development Estimate.

(Ch-11) Required Assets Availability (AF) was added to reflect the Operational Requirements Document (ORD) and accelerated program.

(Ch-12) Initial Operational Capability (IOC) was deleted because only the Navy has specified an IOC. This milestone is not included in the Milestone II Acquisition Program Baseline (APB) and will not be carried forward as part of the Development Estimate.

(Ch-13) Initial Operational Capability (FA-18) was added to reflect the Operational Requirements Document (ORD).

(Ch-14) Full Rate Production Contract Award was deleted because the current RMD contract has Full Rate Production (Lot 2) as an option. This milestone is not included in the Milestone II Acquisition Program Baseline (APB) and will not be carried forward as part of the Development Estimate.

(Ch-15) Milestone I JDAM PIP was changed from the September 1999 to N/A. The Milestone I JDAM PIP was a decision point for further development of terminal seekers. Terminal seeker development was deleted during the FY97 budget cycle. This is a fact-of-life schedule breach.

1/ Adverse weather is defined as natural/man-made conditions such as rain, haze, dust, smoke, fog, snow, ice, wind, and/or clouds that preclude the use of current inventory precision guided munitions.

2/ Assumes GPS quality hand-off from aircraft. In addition, the target location error (TLE) portion of the total system error is allocated to be 7.2 meters CEP. If TLE is larger than 7.2 meters

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

JDAM, December 31, 1995

10a. Performance Characteristics (Cont'd):

CEP, the total system CEP will increase accordingly. For impact angles between 60 degrees and 35 degrees (with GPS available) accuracy degradation up to 19 meters CEP against horizontal targets is an objective.

3/ Inflight programming/targeting will be possible through MIL-STD-1553/1760 data bus interface to the weapon from existing aircraft stores management hardware and modified software.

4/ JDAM will be capable of operation on aircraft carriers to include withstanding 25 aircraft carrier catapult launches and arrested landings, and operating within the carriers electromagnetic environments.

5/ Physical compatibility with the B-1B, B-2, FA-18C/D, AV-8B and B-52H were successfully demonstrated during actual fit test in EMD Phase 1. F-22A physical compatibility was also demonstrated using computerized physical fit analysis during this phase. Integration with the F-15E, F-16C/D, F-117, FA-18E/F, F-14D, S-3, and P-3 will be addressed as follow-on integration efforts. The A-6E aircraft was deleted by Chief of Naval Operations (CNO) Letter, Serial Number W880D5/4UG59112, dated 2 February 1994. The F-111F has been deleted (Reference AF/XOR Message 260111Z January 1994).

6/ F-22 compatibility will be limited to internal carriage of the MK-83/BLU-110 configuration. The AV-8B is an unfunded, non-key performance parameter, threshold aircraft.

7/ Mission reliability commences when the aircrew accepts the loaded aircraft and ends at weapon impact. Mission reliability for the guidance kits does not include reliability for the fuse. Mission reliability, a component of Guidance Kit system reliability, is used because the other component of system reliability (10 year storage reliability) cannot be demonstrated during development and operational testing.

ACRONYMS: CEP - Circular Error Probable  
DEG - Degree  
GPS - Global Positioning System  
MSL - Mean Sea Level  
PIP - Product Improvement Program  
TBD - To Be Determined

b. Previous Change Explanations -- None.

\*\*\* UNCLASSIFIED \*\*\*

JDAM, December 31, 1995

10c. Performance Characteristics (Cont'd):

c. Current Change Explanations --

(Ch-1) The following performance characteristics were deleted/added from the planning estimate to the development estimate to take into account short duration time-of-flight where JDAM may not acquire Global Positioning System (GPS) satellites even when GPS is available.

- Accuracy (CEP) (Meters) With and Without GPS, Impact Angles > 60 Deg was deleted. This item is shown for transitional purposes only and will be deleted in the next SAR.

- Accuracy (CEP) (Meters) GPS Available, Impact Angles > 60 Deg was added.

(Ch-2) The following performance characteristics were changed to reflect the new Operational Requirements Document (ORD).

- Warhead Compatibility was changed from BLU-109, MK-84, MK-83 (F-22 Only) to BLU-109, MK-84, MK-83 (F-22) because the ORD identified AV-8B as a threshold for MK-83/BLU-110 as well.

- Aircraft Compatibility Bomber was changed from B-1B, B-2 to B-52H to reflect new ORD direction and accelerated program. B-1B and B-2 integration schedules remain unchanged.

- Aircraft Compatibility Fighter Attack was changed from FA-18C/D, F-22 (MK-83 Only) to FA-18C/D, F-22A, AV-8B because the ORD identified AV-8B as a threshold for MK-83/BLU-110 as well.

(Ch-3) Mission Reliability was added. It is a threshold characteristic in the Joint Operational Requirements Document (ORD) and considered a Key Performance Parameter (KPP).

(Ch-4) JDAM PIP Accuracy (CEP) (Meters) was changed from 3 to 8. The PM's current estimate reflects CEP improvements to the baseline JDAM through implementation of the remaining Product Improvement Program developments - improved GPS receiver, reductions in target location error and guidance system improvements. FY97 budget cycle decisions deleted funding for terminal seekers.

(Ch-5) JDAM PIP Weather Capability was added from the planning estimate to the development estimate to clarify JDAM as an adverse weather capable weapon and to maintain that capability when adding Product Improvement Program (PIP).

| b. Quantity --     |                      |                        |                     |
| Development (RDTE) | 378                  | 630                    | 630                 |
| Procurement        | 0                    | 87496                  | 87496               |
| Total              | 378                  | 88126                  | 88126               |

Note: Excludes 194 RDTE prototypes from the SAR Baseline and 81 from the Current Estimate that are not considered fully configured.

The total number of non-fully configured prototypes for the current estimate decreased from 126 to 81 units for two reasons. First, the Joint Program Office (JPO) refined asset requirements with all platforms that would fully support either Martin Marietta or McDonnell Douglas, depending on downselect. This caused an overall decrease from 126 to 95 units. Second, McDonnell Douglas won the downselect which effected another decrease from 95 to 81 units based on their design's physical similarity to a MK-84 tail kit.

NOTE: The Low Rate Initial Production (LRIP) quantities approved in the Acquisition Decision Memorandum (ADM) at Milestone II were 425 (1st year) units. Subsequent FY97 budget cycle decisions approved a buy-to-budget approach for determining annual quantities. With the lower than expected unit costs, LRIP quantities will be 937.

c. Foreign Military Sales/International Cooperative Programs --  
To be determined.

d. Nuclear Costs -- None.

JDAM, December 31, 1995

13b. Cost Variance Analysis (Cont'd):

RD&E

Economic: Revised escalation indices.  
 Quantity: Increased Air Force procurement of 150 additional assets for interim capability. Quantities increased from 533 to 630 to support the required Captive Carriage Reliability Program/Margin Testing and for Integrated System Evaluation on the F-16C/D to support Low Rate Initial Production (LRIP).  
 Estimating: Adjusted for Current and Prior Inflation. Funding increased due to inclusion of Air Force funding for follow-on PIP efforts beyond PIP MS I in FY99 (FY00-FY12). Costs decreased due to redefining the Air Force PIP in FY93-FY99. Navy funding decreased due to Small Business Innovative Research (SBIR) and revised Navy cost estimate. Navy Congressional reductions for Defense Business Operations Fund (DBOF) Assessments. Revised estimate due to change in unit cost.

c. Current Change Explanations --

NOTE: Contract cost performance information is, because of the competitive nature of Phase I, SOURCE SELECTION SENSITIVE. This information is provided to the Air Force Program Executive Office for Weapons (AFPEO/WP) and will be available on request.

The Air Force awarded the contract for the first 18 months effort to Martin Marietta on 11 April 1994. The contract was modified on 20 February 1995 to convert the Engineering and Manufacturing Development (EMD) Phase I Cost Plus Award Fee (CPAF) to a Cost Plus Fixed Fee (CPFF).

On 11 October 1995, Engineering and Manufacturing Development (EMD) Phase II contract option was awarded to McDonnell Douglas. Upon this award, Martin Marietta discontinued earned value accounting and reporting. Data reflects the last earned value report dated September 1995. During our termination discussions, Martin Marietta

Explanation of Change: None.

The Air Force awarded the Engineering and Manufacturing Development (EMD) Phase II contract option on 11 October 1995 to McDonnell Douglas. This is the first time this contract is reported in the Selected Acquisition Report (SAR). PM's estimate at completion incorporates the cost of efforts not included in the prime contractor's final proposal. These costs were identified by the Source Selection Evaluation Group and were recognized by the Source Selection Authority during source selection.

16. Program Funding Summary (Current Estimate in Millions of Dollars):

a. Program Status --

- (1) Percent Program Completed: 28.6% (4 yrs/14 yrs)
- (2) Percent Program Cost Appropriated: 12.8% (\$316.9 / \$2470.6)

b. Appropriation Summary (Then-Year Dollars in Millions)

17b. Production Rate Data (Cont'd):  
per month.

18. Operating and Support Costs:

a. Assumptions and Ground Rules --

Operating and Support costs were updated in November 1995 from the Defense Acquisition Board (DAB) position to reflect the increase in Navy quantities from 12,000 to 25,496 units.

The Air Force JDAM Operating and Support (O&S) cost estimate is based on the use of an O&S cost model named the Financial O&S Estimate (FINOEST) developed by the Air Force Cost Center in Washington, D.C. The model was used for the MS I, MS II, and source selection deliberations to calculate the estimated O&S costs for the JDAM program. FINOEST calculates the O&S costs based on the association between known variables and the JDAM design (labor rates, failure rates, time to assemble, transportation costs, etc.).

The following are the assumptions that were used in forming the Air Force O&S cost estimate: Total Air Force JDAM inventory of 62,000 units. JDAM will have a 20 year extended repair warranty to cover all repairs. Air Force will have two levels of maintenance; Organizational and Depot Level. The JDAM kit has a 20 year operating life. Air Force will conduct 50 drops a year of JDAM kits. The 50 drops a year will require Telemetry (TM) and Flight Termination Systems (FTS). 1/2% of the total JDAM failures will not be covered by the extended repair warranty. The extended repair warranty does not cover overseas transportation costs. Estimate does not take into account any Defense Business Operations Fund (DBOF) activities.

There is no antecedent system for the Air Force JDAM.

The cost drivers for the Air Force O&S cost estimate were Telemetry and Flight Termination Systems for the 50 yearly drops along with the Range Support costs for the drops.

The Navy O&S costs are based on the NAVAIR O&S cost model.

The following are the assumptions that were used in forming the Navy O&S cost estimate: Utilized Air-4.2.5 Air-Launched Missile Model. 12 carriers deployed per year. 350 JDAMs per carrier. 50 firings per year. 10% container failure rate per year. Contractual support identified for first two years of operations. 20 year operating life.

JDAM, December 31, 1995

18a. Operating and Support Costs (Cont'd):

The cost drivers for the Navy O&S cost estimate were Range Evaluation for practice bomb drops, Sustaining Engineering/Program Management, Transportation, and Organizational Maintenance Handling/Inspection.

There is no antecedent system for the Navy JDAM.

b. Costs -- (FY 1995 Constant (Base-Year) Dollars in Millions)

| Cost Element              | Total Cost for<br>87,496 JDAM Units | N/A |
|---------------------------|-------------------------------------|-----|
| Consumable Material       | 2.7                                 | N/A |
| TM/FTS                    | 56.3                                | N/A |
| Range Support             | 45.3                                | N/A |
| Technical Data Management | 0.2                                 | N/A |
| Transportation            | 6.9                                 | N/A |
| Non-Warranted Repair Cos  | 0.1                                 | N/A |
| Mission Personnel         | 6.7                                 | N/A |
| Sustaining Engineering    | 7.2                                 | N/A |
| System & Inventory Manag  | 1.8                                 | N/A |
| Contractor Support        | 0.6                                 | N/A |
| AFMSS                     | 14.4                                | N/A |
| Other                     | 5.7                                 | N/A |
| Total                     | 147.9                               | N/A |

Operating and Support Costs include both Air Force and Navy dollars.

The Other category includes Integrated Logistics Support (ILS) functions such as quality surveillance and Naval Weapon Systems (NWS) handling/processing costs.

JDAM, December 31, 1995

18c. Operating and Support Costs (Cont'd):

c. Contractor Support Costs -- (Current (Then-Year) Dollars  
in Millions)

| Funding            | FY1995<br>& Prior | FY1996 | FY1997 | Balance<br>To<br>Complete | Total |
|--------------------|-------------------|--------|--------|---------------------------|-------|
| Contractor Support | ---               | ---    | ---    | 0.6                       | 0.6   |
| Total              | ---               | ---    | ---    | 0.6                       | 0.6   |

Contractor support costs for the Navy will begin in FY98 and continue for the first two years of operation. The Navy will use the contractor support as "tech rep" support for any Navy unique requirements at the Naval Weapon Stations and aboard the aircraft carriers.

Based on the 20 year extended repair warranty, the Air Force does not have a requirement for contractor support. The 20 year extended maintenance repair warranty begins with Lot 1 and will cover any repairs required.

5. Related Programs:

None.

6. Mission and Description:

The existing constellation of Ultra High Frequency (UHF) communication satellites provides key command and control links for mobile forces of the DoD and other Government Agencies. As Executive Agent, the Navy is charged with maintaining the continuity of the space segment. The UHF Follow-On Program provides a new generation of communication satellites to replenish the existing constellation. The first UHF Follow-On satellite became operational in December 1993.

UHF FOLLOW-ON, December 31, 1995

7. Program Highlights:

a. Significant Historical Developments --

Due to the urgent need to satisfy DoD communication requirements, the Secretary of Defense designated the UHF Follow-On Program a major acquisition program in May 1988.

A Defense Acquisition Board (DAB) Milestone IIIA decision was made on July 22, 1988 authorizing the program to enter production. After full and open competition, a firm fixed priced contract was awarded to Hughes Aircraft Company on July 29, 1988. Congress approved a multiyear procurement of this system in the FY89 Defense Authorization Act.

The Navy's Operational Test and Evaluation Force conducted an early operational assessment concluding that the UHF Follow-On (UFO) satellite system is potentially operationally effective and suitable.

The DAB program review held on 25 May 1990 reaffirmed the decision to proceed with the UHF Follow-On production and approved adding a limited Extremely High Frequency (EHF) capability pursuant to requirements promulgated by the Joint Chiefs of Staff (JCS), beginning with the fourth launched satellite. The acquisition baseline incorporating the EHF capability was signed by the Defense Acquisition Executive on 9 October 1990.

The first UHF Follow-on (UFO) satellite, F1, was launched on 25 March 1993 and subsequently declared a total loss as a result of underperformance of the launch vehicle. The Government received \$199M in contract remedies for the loss.

Acquisition Program Baseline Change 1, dated 16 June 1993, revised the milestone objectives for Production Acceptance Test and Evaluation Initial (PAT&E-I), Operational Testing Phase III (OT-III), and Initial Operational Capability (IOC).

The second UFO satellite, F2, was launched on 3 September 1993, and became operational over the Indian Ocean on 2 December 1993 to achieve program IOC.

In the FY-94 Defense Appropriations Act, Congress approved the use of the \$199M contract remedies from the F1 loss to procure and launch an EHF capable replacement satellite.

On 26 January 1994, a contract modification was awarded at the not-to-exceed price of \$197M for an Extremely High Frequency (EHF) capable tenth satellite to replace satellite F1.

The third Ultra High Frequency follow-On (UFO) satellite, F3,

UHF FOLLOW-ON, December 31, 1995

**7a. Program Highlights (Cont'd):**

successfully launched on 24 June 1994, is operational over the Atlantic Ocean.

In July 1994, following a very successful OT-III, Commander, Operational Test and Evaluation Force (COMOPTEVFOR) reported satellite F2 to be operationally effective and suitable.

**b. Significant Developments Since Last Report --**

The fourth UFO satellite, F4, the first to include the EHF Space Package, was successfully launched aboard an Atlas II launch vehicle on 28 January 1995, and became operational over the Pacific Ocean on 16 March 1995.

The fifth UFO satellite, F5, successfully launched aboard an Atlas II launch vehicle on 31 May 1995, became operational over the Indian Ocean on 26 July 1995.

The sixth UFO satellite, F6, successfully launched aboard an Atlas II launch vehicle on 22 October 1995, became operational over CONUS on 22 December 1995.

On 1 November 1995, following a very successful OT-IIIB, Commander, Operational Test and Evaluation Force (COMOPTEVFOR) reported F4 and the EHF Space Package to be operationally effective and suitable.

The UFO Program Office held an Interim Global Broadcast Service System Requirement Review with Hughes Space and Communications Company on 13 December 1995.

The Intelligence Program Review Decisions Memorandum, 27 December 1995, required hosting an Interim Global Broadcast Service capability on UFO satellites eight through ten.

This system will satisfy mission requirements.

**c. Changes Since As Of Date --**

In February 1996, DoD forwarded a special FY 96 Above Threshold Reprogramming request to Congress in order to initiate integrating an Interim Global Broadcast Service capability on UFO satellites eight through ten.

**8. Threshold Breaches:**

There are no breaches to the Acquisition Program Baseline of 16 June 1993. There are no Nunn-McCurdy unit cost breaches.

| IOC (Satellite No. 4 w/EHF)   | TBD                            | MAY 95                      | MAR 95                      |

b. Previous Change Explanations --

The Production Estimate was adjusted to reflect the program as stated in the Acquisition Program Baseline dated 9 October 1990. Due to the failure of satellite F1, PAT&E-I (Start in-orbit testing), OT-III, and IOC milestones could not be achieved in 1992. As a result, under the Approved Program, those milestone objectives and the IOC (Satellite No. 4 w/EHF) objective were changed according to Acquisition Program Baseline Change 1 dated 16 June 1993.

The current estimate for OT-IV was changed from February 1995 to August 1995 for two reasons: (1) The launch of satellite F4, the satellite required for OT-IV testing, was delayed from First Quarter FY-95 until Second Quarter FY-95. (2) Although satellite F4 became operational in March 1995, operational testing was being delayed until terminals were available for testing.

IOC (Satellite No. 4 w/EHF) was achieved in March 1995.

15. Contract Information (Cont'd):

Explanation of Change: None.

Cost and Schedule variance reporting is not required on the FFP contract.

The current contract price includes the addition of an RHF capability which was contained in a contract modification executed on 13 Dec 1990. Procurement of the tenth satellite is funded with the contract remedies resulting from the loss of the first satellite. The number of deliveries has therefore increased from nine to ten.

a. Deliveries to Date --

|             | <u>Plan/Actual</u> |
|-------------|--------------------|
| RDT&E       | 0/0                |
| Procurement | 5/5                |

b. Approved Design-to-Cost Objective -- N/A.

18. Operating and Support Costs:

a. Assumptions and Ground Rules --

The support functions for UHF Follow-On will be similar to those required for the existing UHF communications satellite constellation. Costs are born by the Program Executive Officer for Space, Communications and Sensors and the Naval Space Command. The operations and support cost estimate was made in February 1990 in support of a SECDEF Cost Analysis Improvement Group (CAIG) review. The antecedent annualized costs listed represent the average costs for the FLTSAT satellite constellation for FY 1986 to FY 1988.

b. Costs -- (FY 1988 Constant (Base-Year) Dollars in Millions)

| Cost Element     | Avg Annual Cost Per<br>UHF Follow-On | Avg Annual Cost Per<br>FLTSAT Support |
|------------------|--------------------------------------|---------------------------------------|
| Orbital Support  | 1.6                                  | 2.0                                   |

 AND SECURITY REVIEW (OASD-PA)  
 DEPARTMENT OF DEFENSE  
 76-0-0453

JTUAV, December 31, 1995

5. (U) Related Programs:

None.

6. (U) Mission and Description:

The Unmanned Aerial Vehicles-Joint Program had encompassed two significant programs; Hunter/Shipboard and Maneuver. UAVs are family of powered aerial vehicles which do not carry a human operator and which are designed to carry a non-lethal payload. Missions may include: Reconnaissance; surveillance; target acquisition; target spotting; command and control; meteorological data collection; nuclear, biological, and chemical detection; special operations support; and disruption and deception.

The Maneuver, formerly Close Range System was to provide Reconnaissance, Surveillance, and Target Acquisition (RSTA) capabilities and meteorological data to commanders of lower level tactical units (Brigade & Battalion's). The system was to be highly mobile, easy to operate and maintain with a minimum of manpower and training and capable of launch and recovery in constrained operational environments.

The Hunter/Shipboard, formerly Short Range system was the developmental baseline for a common architecture to achieve interoperability within the family of UAVs. The system provides commanders with near-real-time intelligence, reconnaissance, and battlefield surveillance. Hunter/Shipboard was intended for employment in environments where immediate feedback is needed, manned aircraft are unavailable, or excessive risk or other conditions render use of manned aircraft less than prudent.

Under Secretary of Defense (USD) (Acquisition and Technology) (A&T) has rendered an Acquisition Decision Memorandum (ADM) on both the JTUAV Maneuver and Hunter programs, USD (A&T) Memos of December 21, 1995 and January 31, 1996 respectively. These ADM changes are reflected in section 7 of this report.

7. (U) Program Highlights:

a. (U) Significant Historical Developments --

In response to congressional direction in FY88 to consolidate the management of DOD nonlethal UAV programs, the Under Secretary of Defense (Acquisition) established the UAV Joint Project Office (JPO). An Executive Committee (EXCOM) was established on April 7, 1988 with overall responsibility for DOD UAV programs at the OSD level. In 1991 the EXCOM was disestablished and DOD UAV programs were brought under the Defense Acquisition Board (DAB) procedures and management. The Navy is the Executive Service for the UAV JPO, with full authority, responsibility, and accountability for designing, developing, procuring, and transitioning UAV systems to meet the Services' needs. The systems must meet the requirements validated by

JTUAV, December 31, 1995

7a. (U) Program Highlights (Cont'd):

the Joint Requirements Oversight Council (JROC) commensurate with available funding.

The following gives specific highlights for each UAV program:

**Maneuver:** A risk reduction technology demonstration program for the Maneuver system was implemented during FY 1991 and completed FY 1992. Six companies participated in a technology demonstration of a two man portable/200 pound class air vehicle. In addition, two companies demonstrated lightweight Forward Looking Infrared (FLIR) payload devices in the 50 pound class. These efforts reduced both the technical and schedule risk for the Maneuver program. Demonstrations showed that current technology supports the concurrent use of a 50 pound FLIR and a two man portable/200 pound air vehicle and established an excellent competitive industrial base for the program.

**Hunter/Shipboard:** McDonnell Douglas Missile Systems Company and Israel Aircraft Industries (IAI) were awarded contracts in September 1989. Following Technical Evaluation Test and Limited User Test I (LUT I), the source selection authority selected IAI as the winning Hunter/Shipboard prime contractor on June 30, 1992. On December 28, 1992 the contract with IAI was novated, making TRW the prime contractor and IAI the principal sub-contractor. The DAB recommended approval and the Acquisition Decision Memorandum of January 19, 1993 approved Low Rate Initial Production of seven systems, and approved initiating effort on the Block II improvement program.

b. (U) Significant Developments Since Last Report --

**Maneuver:** On December 21, 1995, the Under Secretary of Defense (Acquisition and Technology) signed an Acquisition Decision Memorandum (ADM) that approved the initiation of an Advanced Concept Technology Demonstration (ACTD) for a single Tactical Unmanned Aerial Vehicle (TUAV) System. The ADM also stated that the Director, Acquisition Program Integration (API), shall remove the Maneuver component of the JTUAV program from the Major Defense Acquisition Program (MDAP) list.

Based on the December 21, 1995 ADM, this will be the final SAR for the Maneuver program.

**Hunter:** The Under Secretary of Defense (Acquisition and Technology) reviewed the Joint Tactical Hunter Unmanned Aerial Vehicle program and executed an ADM of January 31, 1996 which provides for:

- Complete acceptance of systems 6 and 7, and terminate the Hunter acquisition program by allowing the current contract to

JTUAV, December 31, 1995

7b. (U) Program Highlights (Cont'd):

expire.

- Provide one Hunter system to the Army for operations concept refinement, and continuation training until the Tactical and Predator UAV programs provide assets for these uses.

- Provide sufficient Hunter assets to support initial operator and maintainer training at the Joint UAV Training Center and the Joint UAV Systems Integration Laboratory to support joint service UAV interoperability, testing and evaluation.

- Provide the required logistical support for the operational assets. All other Hunter equipment should be placed in inactive status and stored for utilization/disposal as determined by the Army.

- Do not pursue additional upgrades to the current Hunter system. However, those commonality and interoperability efforts beyond the Hunter program Common Automated Recovery and Landing Systems UAV CARLS, UAV Payload Demonstrations, Downsized Subsystem and Mission Critical Computer Resources (MCCR) upgrade should continue under the designated UAV program.

- Cancel the previously approved Hunter-Predator User Demonstration.

The Director, API, shall remove the Hunter program from the MDAP list.

Based on the JTUAV Hunter ADM, this will be the final SAR for the JTUAV Hunter program.

c. (U) Changes Since As Of Date -- See Section 7.b above.

8. (U) Threshold Breaches:

The JTUAV Hunter/Shipboard program has a Nunn McCurdy unit cost and Acquisition Program Baseline (APB) breaches due to program termination.

JTUAV, December 31, 1995

9. (U) Schedule:  
Maneuver

| a. (U) Milestones --                | Development<br><u>Estimate</u> | Approved<br><u>Program</u> | Current<br><u>Estimate</u> |        |

| Complete                            | FEB 97                         | N/A                        | N/A                        | (Ch-1) |
| Milestone III                       | FEB 97                         | N/A                        | N/A                        | (Ch-1) |
| Full Rate Production Contract Award | FEB 97                         | N/A                        | N/A                        | (Ch-1) |
| First Unit Equip (FUE)              | JUN 97                         | N/A                        | N/A                        | (Ch-1) |
| Initial Operating Capability (IOC)  | FEB 98                         | N/A                        | N/A                        | (Ch-1) |

b. (U) Previous Change Explanations --

Delay in final approval of the Joint Operational Requirements Document (JORD), DARO FY95 funding release and completion of the Cost Operational Effectiveness Analysis (COEA) resulted in delay of Milestone I/II, Milestone III and all subsequent milestone schedules.

c. (U) Current Change Explanations --

(Ch-1) On December 21, 1995 the Under Secretary of Defense (Acquisition and Technology) signed an ADM that approved the initiation of an Advanced Concept Technology Demonstration (ACTD) for a single Tactical Unmanned Aerial Vehicle (TUAV) system. The ADM phases out the Maneuver component of the JTUAV program.

b. (U) Previous Change Explanations --

NDI contract award date, Service final DT&E (TET) start, Early Operational Assessment (LUT I) start and complete, Low-Rate Production Review (LRPR), Milestone III, and Organic Support were added to the approved Acquisition Program Baseline, dated 19 January 1993.

The scheduled completion of the Technical Evaluation Test (TET) slipped from October 1991 to April 1992 because insufficient data had been accumulated to validate if the competing systems were ready for Limited User Test (LUT). In addition technical difficulties delayed the acceptance of the LRIP systems. These events delayed all subsequent milestone schedules and prompted the PM to pursue an acquisition strategy of putting the equipment into the hands of the users. The users would evaluate, identify deficiencies and collect performance data on the system to allow correction of deficiencies prior to IOT&E to reduce risk. Milestones IIIB and IIIC were replaced by one full rate production decision, Milestone III. IOT&E

9b. (U) Schedule (Cont'd):

JT UAV Hunter/Shipboard

and subsequent milestones reflected the values introduced by the proposed baseline for the JTUAV Hunter program which introduced the concept of Fly-Test-Fly. This delay in schedule affected IOT&E start and stop, Milestone III and all subsequent milestones.

c. (U) Current Change Explanations --

(Ch-1) The Under Secretary off Defense (A&T) has signed the JTUAV Hunter ADM on January 31, 1996 that terminates the Hunter acquisition program.

d. (U) References --

(U) Development Estimate:

DOD UAV 1994 Master Plan approved March 31, 1994; JROC Hunter/Shipboard Annex approval Feb 1995. JROCM-006-91, UAV Program Fielding Sequence, March 25, 1991; JROCM-008-91, June 1991; UAV JOP Charter Signed October 16, 1989. Acquisition Decision Memorandum (ADM) signed January 3, 1992, approved January 19, 1993 (Initial LRIP of seven systems).

(U) Approved Program:

DAE Approved Acquisition Program Baseline dated January 19, 1993.

g. (U) Unit Cost Changes.

(1) (U) PAUC --

The Under Secretary of Defense (Acquisition and Technology) executed an Acquisition Decision Memorandum (ADM) on January 31, 1996 which terminated the JTUAV Hunter/Shipboard acquisition program after

\*\*\* UNCLASSIFIED \*\*\*

JTUAV, December 31, 1995

USD(A&T) memo of 21 Dec 95 removed Maneuver from the MDAP and consolidated the Maneuver and Hunter programs into a single Tactical UAV ACTD requirement and program.

b. (U) Previous Change Explanations --

RD&E

Economic: Revised escalation indices. Economic adjustment for negative program change.

Estimating: Increased estimate to reflect revised escalation indices. Adjustment for Current & Prior Inflation. Re-evaluated program development requirements.

JTUAV, December 31, 1995

13b. (U) Cost Variance Analysis (Cont'd):  
Maneuver

Procurement

Economic: Revised escalation indices.  
Schedule: Rephased annual procurement extending buy by 1 year.  
Estimating: Increased estimate to reflect revised escalation indices. Re-estimate of system cost and production.  
Support: Increased support estimate to reflect revised escalation indices. Increase in data, training service and equipment, other procurement, commercial equivalent equipment, and initial spares to support program rephasing.

b. (U) Previous Change Explanations --

RDT&E

Economic: Revised escalation indices. Economic adjustment for negative program change.

Engineering: Addition of Common Automatic Recovery System (CARS).

Estimating: Adjustment for current & prior inflation. Refined development requirements. Increased costs for Ada Conversion and Heavy Fuel Engine. Congressional directed transfer of T&E to Development and revised estimates due to decrements by the Defense Airborne Reconnaissance Office.

JTUAV, December 31, 1995

13b. (U) Cost Variance Analysis (Cont'd):  
JT UAV Hunter/Shipboard

Procurement

**Economic:** Revised economic escalation indices. Economic adjustment for negative program change.

**Quantity:** Quantity increase of 2 systems. Inclusion of additional attrition air vehicles into FYDP program.

**Schedule:** Delay in procurement buy schedule. Stretch-out of Production. Rephasing of attrition air vehicles buys FY96-07.

**Engineering:** Addition of Shipboard variant.

**Estimating:** Adjustment for current & prior inflation. Increase in attrition spares (replacement air vehicles). Common Auto Recovery System. Realignment of funding to Services' requirements as approved by the UAV working group. Correction to align flyaway and support costs. Re-estimate of system cost and production support. Transfer of T&E from procurement to development and realignment of funding for requirements as approved by the JTUAV working group.

**Support:** Adjustment for current & prior inflation. Increased estimate for peculiar support, initial spares, and other weapon systems costs. Correction to align flyaway and support costs. Support equipment associated with system quantity changes, and schedule rephasing associated system support equipment. Increased estimate for other procurement weapon systems costs and re-estimate of peculiar test equipment.

MILCON

**Economic:** Revised escalation indices.

**Estimating:** Additional hanger facilities. Inflation adjustment.

Maneuver

a. (U) Assumptions and Ground Rules --

None.

b. (U) Costs -- None.

c. (U) Contractor Support Costs -- None.

JT UAV Hunter/Shipboard

a. (U) Assumptions and Ground Rules --

The primary elements of Operating and Support cost are Depot Maintenance, Replenishment Spares, Repair Parts, System Specific Base Ops, Transportation and Replenishment Training. O&S costs shown below are the average cost to support one system for one year. Military personnel cost are excluded.

There is no antecedent system.

O&S cost updated in Dec 1995.

b. (U) Costs -- (FY 1988 Constant (Base-Year) Dollars in Millions)

| Cost Element            | Hunter/ Shipboard<br>Joint Tactical UAV<br>System | No antecedent System<br>System |
|-------------------------|---|--------------------------------|

1. Designation and Nomenclature (Preferred Name):

Advanced Amphibious Assault Vehicle (AAAV)

2. DoD Component: USMC3. Responsible Office and Telephone Number:

DRPM AAA

COL JAMES FEIGLEY

DEPT. OF THE NAVY

Assigned: July 6, 1993

UNITED STATES MARINE CORPS

AV 426-1104 COMM (703) 696-1104

WASHINGTON, DC 20380-0001

4. Program Elements/Procurement Line Items:

RDT&amp;E:

PE 0603611M (Shared) Project B0020

5. Related Programs:

ASSAULT AMPHIBIOUS VEHICLE MODEL 7A1 (AAV7A1)

6. Mission and Description:

The Advanced Amphibious Assault Vehicle (AAAV) Program will field a successor to the Marine Corps' current amphibious vehicle, the Assault Amphibious Vehicle Model 7A1 (AAV7A1). The AAAV will provide principal means of tactical surface mobility for the Marine Air Ground Task Force (MAGTF) during both ship-to-objective maneuver and subsequent combat operations ashore. The AAAV will provide the Marine Corps with the capabilities to execute the full range of its littoral warfare missions as well as the requisite survivability.

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

AAAV, December 31, 1995

6. Mission and Description (Cont'd):

offensive firepower, and mobility to support future combat operations ashore. The AAHV replaces the AAHV7A1 Vehicle.

7. Program Highlights:

a. Significant Historical Developments --

A mission area analysis, completed in 1988 to identify future littoral warfare requirements, identified significant deficiencies in the Marine Corps existing amphibious vehicle. A mission needs statement (MNS) was submitted to DoD and a series of Milestone 0 program reviews were conducted by the Defense Resources Board (DRB) and the Defense Acquisition Board (DAB) in 1988. The purpose of these reviews was to validate the stated mission need and permit the analysis of alternatives that would eliminate mission area deficiencies. Approval from both the DRB and DAB was received in 1988 and is documented in the Program Decision Memorandum (PDM) and Acquisition Decision Memorandum (ADM) respectively. Their approval formally initiated the Concept Exploration/Definition (CE/D) phase where no less than 13 alternative solutions have been evaluated. Based on this and other analyses, the Advanced Amphibious Assault Vehicle (AAHV) was determined to be the most effective system by a significant margin over all other candidates.

Both Advanced Amphibious Assault Vehicle (AAHV) contractors, United Defense Limited Partnership (UDLP) (formerly FMC Corporation) and General Dynamics Land Systems (GDLS), successfully fabricated Hydrodynamic Test Rigs (HTRs). The HTRs were approximately 0.8 Froude scale models of their respective AAHV designs. Both HTRs attained water speeds in excess of 30 knots and on 19 May 1993 GDLS' HTR operated for 1.4 hours on plane while covering 34 nautical miles at an average speed of approximately 25 knots. UDLP and GDLS submitted armor samples that have demonstrated and met the C/E phase AAHV armor protection requirement. In September 1993, both contractors were awarded contracts to design, fabricate, and test a full scale Automotive Test Rig (ATR). The contractors continued testing hydrodynamic test rigs at speeds exceeding 25 knots and maturing their AAHV designs. Both contractors completed testing AAHV hull and armor samples that meet the C/E phase AAHV requirement. Both contractors have completed the land mobility testing of their AAHV ATR at Aberdeen Proving Ground. Each contractor has completed fabrication an operational mock up of their vehicle commander/weapon stations. The weapon stations/operational mock up will be tested at Aberdeen Proving Grounds from March to July 1996. The AAHV program office has initiated significant modeling and simulation efforts with the University of Iowa, University of Central Florida, Lawrence Livermore, and the Marine Corps Modeling and Simulation Office. On March 17, 1995 the AAHV program received it Defense Acquisition Board (DAB) approval to enter Demonstration/Validation (Dem/Val).

AAAV, December 31, 1995

7a. Program Highlights (Cont'd):

b. Significant Developments Since Last Report --

Both contractors successfully completed land mobility testing of their full-scale Automotive Test Rigs (ATR) at Aberdeen Proving Grounds (APG). Both contractors have completed fabrication of operational mockups of their weapon stations. Testing is scheduled to begin at APG during March 1996. Both contractors submitted their initial proposals for Demonstration/Validation phase on 29 Sept 1995. On 30 September 1995 OSD issued Program Decision Memorandum (PDM) II which provided an additional \$107 Million throughout FY97-FY01, and directed that Dem/Val phase be accelerated, shortened by nine (9) months. Since PDM II was issued one day after submittal of the Dem/val proposals, both contractors have been required to revise their proposals to incorporate the PDM II changes.

c. Changes Since As Of Date --

Both contractors resubmitted their Dem/Val proposals on 28 February 1996. Due to this revision, and the Federal Government furlough and lost snow days. Dem/Val award has been changed from April 1996 to May 1996. This system will satisfy mission requirements.

8. Threshold Breaches:

There are no breaches to the Acquisition Program Baseline (APB) dated March 17, 1995. In accordance with Section 2433, Title 10, USC, Nunn-McCurdy Unit Cost Reporting is not required for pre-milestone II programs.

9. Schedule:

Note: Some dates are subject to change after award of the Demonstration Validation Phase Contract to the Contractor's schedule.

b. Previous Change Explanations -- None.

c. Current Change Explanations --

(Ch-1) the Dem/Val contract award date was changed from Apr 96 to May 96 due to Federal Government furlough and snow days causing the source selection meetings to be rescheduled.

(Ch-2) Program Decision Memorandum (PDM) 2, signed 30 September 1995 stated the following; "(U) Navy, Marine Corps, Provide additional funding as shown below to accelerate Initial Operational Capability to FY2007." \$107M spread from FY97-01. This allowed shortening the design phase and the time for fabrication of the Dem/Val prototype. The net result was a nine (9) month acceleration, or shortening, of the Dem/Val phase.

(Ch-3) Milestone II DAB Review was changed from Jan 02 to Jun 01 due to the PDM 2 acceleration of the program.

Note: Program Decision Memorandum II provided additional funding in the amount of \$107 million from FY97-01 to accelerate the program nine (9) months to shorten the Dem/Val phase. Congress increased AAAV Program \$6.0 million in FY96 for Engine Development and system technical risk reduction. OSD marked (decremented) the FY96 President's Budget \$2.1 million. In addition, OSD issued programmatic marks against FY97-01 (as augmented by PDM II) decreasing funds by \$18.8 million. Total decrement \$20.9 million Potential schedule impact has not been determined.

NEW ATTACK SUB, December 31, 1995

**5. (U) Related Programs:**

NSSN Command, Control, Communications and Intelligence Program  
NSSN Reactor Plant

**6. (U) Mission and Description:**

The New Attack Submarine Program is bringing forward a critical national security asset designed to flexibly address the unique multi-mission requirements of the post-Cold War era. Capable of performing traditional submarine missions, dominating the littoral battlespace and adapting to future requirements, the New Attack Submarine will satisfy any assigned role well into the Twenty-First Century. Intended to replace the fleet of SSN 688 Class submarines ending service in large numbers early next century, the New Attack Submarine is characterized by state-of-the-art stealth, enhanced features for special operations forces, and cost effective Command, Control, Communication and Intelligence capability. With an array of armament including the MK48 (ADCAP) torpedo and cruise missile vertical launch capability, the New Attack Submarine maintains total undersea superiority at an affordable cost.

(b)(1)

7a. Program Highlights (Cont'd):

b. (U) Significant Developments Since Last Report --  
In response to USD (A&T) direction to "rebaseline" all ACAT 1D programs under the new IPT initiatives, the program convened its first Integrating IPT (IIPT) meeting with representatives from various OSD and Navy offices in December 1995.

c. (U) Changes Since As Of Date --  
A letter contract for Integrated Product and Process Development was signed on January 29, 1996. Negotiations for the definitization of the contract are ongoing and are expected to be complete in the second quarter of FY96. The Department is preparing a plan to be released to Congress in March 1996 reflecting changes required to support competition.

8. (U) Threshold Breaches:

There are no breaches to the approved APB dated June 30, 1995. There are no Nunn-McCurdy unit cost breaches.

9. (U) Schedule:

| a. (U) Milestones --  | Development<br><u>Estimate</u> | Approved<br><u>Program</u> | Current<br><u>Estimate</u> |

(b)(1)

\*The New Attack Submarine Program Office is tracking the six year earlier delivery of the MK-48 ADCAP weapon system.

b. (U) Previous Change Explanations --

The projected award date of the IPPD96 Design/Build contract slipped from OCT 95 to JAN 96 as the effects of the congressional deliberations over the FY96 Defense Authorization and Appropriations Bills, and the likely introduction of Newport News Shipbuilding (NNS) into the New Attack Submarine program were being considered.

c. (U) Current Change Explanations -- None.

| Procurement         | <u>30</u>                      | <u>30</u>                  | <u>30</u>                  |
| Total               | 30                             | 30                         | 30                         |

Note--An LRIP quantity not to exceed 14 New Attack Submarines was assigned at Milestone II by USD (A&T). The New SSN acquisition profile builds 1 or 2 ships per year for a total quantity of 30 ships and supports the JCS requirements for attack submarine force levels. The length of time from start of construction through operational testing for the lead ship is approximately nine years. A delay of this length between the first and second ships would neither support force level requirements nor sustain the fragile submarine industrial base.

| Cumulative Variances To Date  | N/A                  | N/A                      |
| Net Change                    | \$0.0                | \$0.0                    |

Explanation of Change: None.

Note--A letter contract (IPPD96) was awarded on January 29, 1996 with contract definitization anticipated in the second quarter of FY96. The initial contract price equates to the current contract price. The estimated cost plus fixed fee amount will change upon definitization of the contract. The Program Manager's estimates have been omitted because disclosure could jeopardize the ongoing negotiation process. CSCSC is a requirement of this contract and will be fully invoked upon adjudication of the contract.

NEW ATTACK SUB, December 31, 1995

17. (U) Production Rate Data:

- a. (U) Deliveries to Date -- 0/0.
- b. (U) Approved Design-to-Cost Objective -- N/A.

18. (U) Operating and Support Costs:

- a. (U) Assumptions and Ground Rules --

Operations and Support (O&S) costs are developed at the ship level, on an annual cost per ship basis by cost category and appropriation, with total and annual average cost over the submarine's expected service life. Costs are estimated for all categories listed in the CAIG O&S Cost Estimating Guide utilizing historical data from operating submarine classes. Maintenance and Personnel costs are the major contributors to the total O&S Program. The source of this cost estimate is the New Attack Submarine Milestone II Program Life Cycle Cost Estimate of June 1995.

- b. (U) Costs -- (FY 1995 Constant (Base-Year) Dollars in Millions)

| Cost Element             | Avg Annual Cost Per Ship |     |

DECLASSIFIED FOR FREEDOM OF INFORMATION  
ACT (50 USC 3025)

\*\*\* UNCLASSIFIED \*\*\*

CMU, December 31, 1995

5. (U) Related Programs:

ITW/AA, BMEWS, FAVE PAMS, SSNIP, ASAT, SPADCCS, DSP, NWS, BMD, AFAMPE, ATWC, JWSC, MILSTAR, JSS, ROCC/SOCC, ASPADOC, IDHS, COBRA DANE, WADS, SEEK IGLOO, FAHR.

6. (U) Mission and Description:

The CMU program develops system capabilities to ensure fully capable, timely and reliable day-to-day processing of all tactical warning mission data for atmospheric, ballistic missile and space threats. These capabilities must endure natural or man-made disturbances, jamming, sabotage and other effects to ensure the availability of Integrated Tactical Warning and Attack Assessment (ITW/AA) information in peacetime and through a conflict until physically destroyed. The capacity of the CMU "system of systems" and their interfaces is sufficient to handle both single event, and small and large scale raids. It also provides credible warning data to all U.S. forces and the National Command Authorities (NCA). Transmission of missile warning sensor messages to the Cheyenne Mountain AFB (CMAFB) and the Alternate Processing and Correlation Center (APCC), and forward fixed users is processed by the Survivable Communications Integration System (SCIS) equipment. Warning messages from air and intelligence sources are transmitted to the CMAFB correlation center directly. Space warning data is provided to CMAFB through Space Defense Operation Center (SPADOC) and Alternate SPADOC at Dahlgren Naval Space Surveillance Center. Messages are routed through the Communications System Segment Replacement (CSSR) and passed to the mission centers. These mission centers (SPADOC for CMAFB only), Air Defense Operations Center (ADOC), and the Missile Warning Center (MWC)) use the Command Center Processing and Display System Replacement (CCPDS-R) and Granite Sentry to process the information and generate displays critical to decision makers.

7. (U) Program Highlights:

a. (U) Significant Historical Developments --

The 1989 Defense Appropriations Act directed a consolidation of six ongoing development programs under the Cheyenne Mountain Upgrade (CMU) program. These programs were being developed to correct deficiencies in the existing communications, processing, and display systems within the Integrated Warning and Attack Assessment (ITW/AA) system. The Defense Acquisition Board (DAB) approved the consolidated acquisition and integration approach in September 1989 and the Defense Acquisition Executive approved the Acquisition Program Baseline (APB) on 12 February 1990. This phased acquisition called for incremental deliveries of capability for space defense, air warning, missile warning, communications and message processing elements.

In the early 1990's, all CMU elements achieved some successes as measured against the APB. However, in 1993 significant resource

\*\*\* UNCLASSIFIED \*\*\*

CMU, December 31, 1995

7a. (U) Program Highlights (Cont'd):

contention problems impacted the program's ability to conduct development testing while supporting operational needs. Shortages of available hardware, manpower and test time overstressed the capabilities of the Cheyenne Mountain Complex (CMC) community to conduct the operational mission and testing simultaneously. In March 1994, the CMU Program declared a formal breach of its APB schedule.

Beginning in early 1994, independent reviews of the CMU program were conducted by a SAV/AQ "red team", an independent SAV/AQ sponsored "Senior Review Team", and by the GAO. These efforts combined to produce a complete replanning of the remaining CMU acquisition effort. It rebaselined CMU acquisition milestones into mission oriented phase milestones, scheduled operational assessments on the Air and Space Warning subsystems, and provided dedicated operational testing. The Replan required an increase in the CMU 3600 appropriation by \$48M and added 36 months to the CMU program schedule. The Air Force Acquisition Executive approved the restated APB on 24 September 1994.

Phase I program content includes Command Center Processing and Display System - Replacement (CCPDS-R) single string, Survivable Communications Integration System (SCIS) mini-net, Strategic Summary Displays, Space Defense Operations Center (SPADOC) 4C Version 2 with the Communications System Segment and the Alternate Processing and Correlation Center (APCC) (Missile Warning Mission capability). Subsequent phase will be delivered approximately every twelve months. Phases I through IV constitute the total CMU Program.

b. (U) Significant Developments Since Last Report --  
Operational Acceptance of the APCC and the United States Strategic Command-unique system occurred in Sep 95. SCIS Phase 1 and Phase 2A sites were operationally accepted in Sep 95. These events concluded all CMU APB Phase I activities on 13 Sep 95, 78 days ahead of schedule.

The CMU program remains on track to meet its APB Phase II milestone. An exhaustive Missile Warning IOT&E (MW IOT&E) is planned to begin in late April 1996. All acquisition activities currently support the ability to enter this testing phase. APB Phase II requirements include Vertical Release (VR) 96V-1, which includes ITW/AA failover and Strategic Summary Displays. VR96-1 is on schedule for operations acceptance in early April 96. CCPDS-R APB Phase II requires processing and display subsystems at five sites. Operational acceptance at one site has occurred, and schedules for the remaining sites support the start of MW IOT&E. SCIS APB Phase II requirements include Version 4 software operational at nine sites. This software is undergoing operational assessment and is scheduled

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

CMU, December 31, 1995

7b. (U) Program Highlights (Cont'd):

to complete test review in early April 96.

MW IOT&E is scheduled from late April 96 to late July 96. Following MW IOT&E, there is an approximate one month period allowed for a Joint Reliability, Maintainability Evaluation Team assessment and a general officer Operations Approval Board. CMU APB Phase II schedule remains on track to meet its mid-August 96 operational acceptance, within the threshold value of December 96.

A revised Acquisition Program Baseline (APB) was submitted 20 Nov 95 to reflect the performance parameters based on the 1995 CMU Operations Requirements Document (ORD), dated 23 Aug 95. The ORD deleted all previous parameters that were based on the CMU System Operational Requirements Document (SORD, dated 9 Sep 92) and replaced them with new key parameters that are more representative of operational requirements vice system specification requirements. In addition, based on additional requirements to implement Survivable Secure Communications Network (SSCN) into the Mobile Consolidated Command Center (MCCC) and the Mobile Ground Terminals (MGT), the SSCN portion of the CMU Phase II schedule was shifted to CMU Phase III. The APB was signed by the AFAP 25 Jan 96.

The Air Force Acquisition Executive approved the Test and Evaluation Master Plan (TEMP) 27 Nov 95. AF/DO&E signed the TEMP 18 Jan 96.

This system will satisfy mission requirements.

c. (U) Changes Since As Of Date -- None.

8. (U) Threshold Breaches:

There are no breaches to the AFAP approved Acquisition Program Baseline (APB) dated 25 Jan 96. There is no Numm-McCurdy unit cost breach.

9. (U) Schedule:

a. (U) Milestones --

|  | Development<br>Estimate | Approved<br>Program | Current<br>Estimate |

9b. (U) Schedule (Cont'd):

b. (U) Previous Change Explanations --

Granite Sentry (Missile Warning) IOC and Granite Sentry (MCC) IOC completed IOT&E with no significant problems and entered Trial Period on schedule in Aug 91. During Trial Period, an operational concern with the control for system switchover during planned and unscheduled maintenance was discovered. The main cause was a lack of System Controller familiarity with Granite Sentry equipment. Granite Sentry Missile Warning and MCC reached IOC on 19 Dec 91. (System Control is a separate existing center in Cheyenne Mountain.)

The SCIS schedule rephasing was planned in our original DAB baseline (two years of internal schedule reserve were included). This slip, based on the poor contractor performance, was recognized in our baseline planning to include the necessary funding and time to resolve all interface issues. Due to an oversight on our part, this was not reflected in the DAB documentation. The replacement milestone to monitor is SCIS IOC.

Granite Sentry (Phase III) (Missile and Space Warning) changed from N/A to Dec 91 to reflect the actual date of completion.

Granite Sentry Completion was adjusted from Nov 95 to Jun 95 due to negotiations with the prime contractor Martin Marietta Co (MMC).

SPADOC 4C IOC changed from Aug 95 to Sep 95 to correct an administrative error in the 31 Dec 91 SAR.

OPCC has been renamed APCC. The schedule information for OPCC (Air Warning/CCP) IOC will now be tracked under the milestone called APCC (Air Warning/CCP) IOC.

CNU is an upgrade of an existing system. Under the new Air Force Materiel Command, System Turnover/PMT is no longer required. Therefore, this item has been deleted from APB.

CCPDS-R Missile Warning (Common Subsystem) IOC was adjusted from Sep 93 to Jun 94. IOT&E was re-started 4 Jan 94 due to GFE communication network difficulties, software fixes, and operational/test considerations. IOC was declared 8 Sep 94.

CSSR Operational Date (Blk Tech Control) IOC was adjusted from Sep 93 to Feb 94. Delay was attributed to correction of deficiencies and required regression testing by AFOTEC. IOC was declared 9 Feb 94.

Based on the 28 September 1994 APB, the Program will be delivered

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

CMU, December 31, 1995

9b. (U) Schedule (Cont'd):

in Phases. SCIS Installation Checkout Complete - to be delivered in parts throughout Phases I, II and III; CCPDS-R (SAC Force Management) IOC - to be completed in Phase I; Granite Sentry Completion - to be completed in Phase III; SPADOC 4C IOC - to be completed in Phase IV; APCC (Air Warning/CCP) IOC deleted, however APCC with Missile Warning Remote is to be completed in Phase III; Systems of Systems IOT&E - to be completed as a part of Integrated Mission IOT&E; CMU FOC - to be completed as part of Integrated Mission IOT&E; SCIS IOC - to be completed in Phase II.

Additional stub items were added in the Sep 94 SAR:  
CMU Phase I Delivery, CMU Phase II Delivery, Missile Warning IOT&E, CMU Phase III Delivery, Air Warning OA, CMU Phase IV Delivery, Space Warning OA and Integrated Mission IOT&E.

CCPDS-R Missile Warning (Common Subsystem) IOC was declared on 8 Sep 94.

CSSR Installation was completed at APCC 28 Feb 94.

c. (U) Current Change Explanations --

(Ch-1) CMU Phase I delivery occurred 13 Sep 95.

(Ch-2) Although the CMU program remains on track to meet its Phase II milestone, a 47 day delay to the completion of MW IOT&E has been identified. This delay is attributed to a cumulative effect of unscheduled time needed to finalize the test results of SCIS operational assessment, unscheduled post-IOT&E time to assess Joint Reliability, Maintainability Evaluation Team (JRMET) data, and unscheduled pre-coordination time to prepare for a post-IOT&E general officers Operations Approval Board.

b. (U) Previous Change Explanations --

EDT&E

Economic: Revised economic escalation rates. Adjustment for negative program change.

Engineering: Increase for ECP for replacement of SPADOC Megatek Consoles. Increase in engineering requirements.

Estimating: Adjustment for prior and current year escalation. Congressional adjustments to VFRDC, CAAS, and Contract Travel; and budget reductions to Air Force Operation. Reduction to out-year funding for the Defense Business Operations Fund (DBOF). General reductions for consultants and SBIR (Small Business Innovative Research). President's Budget adjustments. Withdrawal of excess funds.

\*\*\* UNCLASSIFIED \*\*\*

CMU, December 31, 1995

13b. (U) Cost Variance Analysis (Cont'd):

Additional funds provided for CCFDS-R Strategic Summary Displays. Congressional adjustments to Non-FFRDC. Reduction for Special Studies to evaluate potential disconnects. Increase for CMU Replan. Inclusion of ITW/AA funds. Inclusion of Cheyenne Mountain Training System funds. Congressionally directed transfer of O&M funds to RDT&E.

Procurement

Economic: Revised economic escalation rates. Adjustment for negative program change.

Estimating: Adjustment for prior and current year escalation. Reduction to out-year funding for the Defense Business Operations Fund (DBOF). Adjustment to data base to remove AFSPC and USSPACECOM procurements from CMU budget. Realignment to acquisition for additional hardware. Increase for AFSPC Command and Control.

Support: Adjustment of funding for Initial Spares and for Interim Contractor Support.

15. (U) Contract Information (Then-Year Dollars in Millions):

a. (U) EDT&E --  
(U) SCIS:  
E - Systems, St. Petersburg, FL  
F19628-86-C-0131, FPIF/AF  
Award: August 21, 1986  
Definitized: August 21, 1986

| Current Contract Price |         |     | Estimated Price At Completion |                 |
|------------------------|---------|-----|-------------------------------|-----------------|
| Target                 | Ceiling | Qty | Contractor                    | Program Manager |
| \$104.2                | \$117.7 | 26  | \$112.0                       | \$112.0         |

|   | Cost Variance | Schedule Variance |
|---|---------------|-------------------|
| Previous Cumulative Variances           | \$-11.9       | \$-0.3            |
| Cumulative Variances To Date (01/28/96) | \$-11.1       | \$-0.2            |
| Net Change                              | \$0.8         | \$0.1             |

Explanation of Change:

The net change in cost and schedule variances is due to continued efficiencies being achieved on the contract.

Changes to current contract target/ceiling prices reflect additional funds placed on contract for delivery and acceptance of Phase II/III work.

There is no overall impact to the contract or program.

(U) CCFDS-R:  
TRW INC., Carson, CA  
F19628-87-C-0047, FPIF/AF  
Award: June 3, 1987  
Definitized: June 3, 1987

| Current Contract Price |         |     | Estimated Price At Completion |                 |

Explanation of Change:

The net change in cost and schedule variances is due to the definitization of a major contract change relating to the Phase II

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

CMU, December 31, 1995

15. (U) Contract Information (Cont'd):

IOC schedule adjustment and the Aug 94 CMU replan. Contract work proceeded without sufficient budget during negotiations in late 1994, causing the negative variance. Upon definitization in May 1995, all budget was distributed and the variance was eliminated.

The contractor continues to carry approximately \$2.1M in management reserve, which is close to the cumulative negative cost variance.

As this contract is over 90% complete, this is the final report for the CCPDS-R Program.

| Target                                     | Ceiling | Qty     | Contractor                    | Program Manager   |
| \$73.4                                     | N/A     | 1       | \$73.4                        | \$73.4            |
| Previous Cumulative Variances              |         |         | Cost Variance                 | Schedule Variance |
|  |         |         | \$3.7                         | \$-0.1            |
| Cumulative Variances To Date (01/26/96)    |         |         | \$0.8                         | \$0.1             |
| Net Change                                 |         |         | \$-2.9                        | \$0.2             |

Explanation of Change:

Net change in the cost variance is due to contractor's recognition of an underrun through application of management reserve for additional work. This action was accomplished in July 95. Since then, cost performance has been positive by approximately \$0.1M per month in various WBS elements.

Price and variance data for this contract are for Block C only and have no negative impact on program.

|------------------------|---------|-----|-------------------------------|-----------------|
| Target                 | Ceiling | Qty | Contractor                    | Program Manager |
| \$40.7                 | N/A     | 1   | \$40.6                        | \$40.6          |

|   | Cost Variance | Schedule Variance |
|---|---------------|-------------------|
| Previous Cumulative Variances           | \$-2.2        | \$-1.3            |
| Cumulative Variances To Date (01/28/96) | \$-1.5        | \$-0.2            |
| Net Change                              | \$0.7         | \$1.1             |

Explanation of Change:

The net change in cost and schedule variances are a result of the contract being renegotiated and rebaselined to reflect the work remaining.

The increase in target price was the result of the contract being renegotiated and rebaselined base on the Re-plan which was signed 30 Jun 95.

There is no overall impact to the contract or the program.

| Grand<br>Total | 1 |  | 298.8 | 1665.0 | 1761.4 | 1668.3 | 1549.7 |  |

Since CMU consists of a complex mix of subsystems for which a conventional unit of measure is not valid, a nominal quantity of one will be used for unit cost reporting. Quantity will always be carried in the current year.

Obligation and expenditure data reflect program office records as of 27 February 1996.

17. (U) Production Rate Data:

- a. (U) Deliveries to Date -- 0/0.
- b. (U) Approved Design-to-Cost Objective -- N/A.

18. (U) Operating and Support Costs:

a. (U) Assumptions and Ground Rules --

Operations Concept - At Full Operational Capability (FOC), Air Force Space Command (AFSPC) will take over complete day-to-day operating responsibility to perform the mission. Each operational center has five crews to support the 24 hour/day mission.

Maintenance Concept - AFSPC will have responsibility for maintenance of application software using both organic manpower and contract support. Commercial Off-the-Shelf (COTS) hardware and COTS system software will have a two-level maintenance concept. AFSPC will have responsibility for organizational level hardware maintenance. Air Force Materiel Command (AFMC) will have responsibility for depot

\*\*\* UNCLASSIFIED \*\*\*

CMU, December 31, 1995

18a. (U) Operating and Support Costs (Cont'd):

level maintenance of COTS hardware and COTS system software with vendor support for repair of COTS hardware and system software.

The costs in section b were derived from the Cheyenne Mountain Complex Cost per Available Hour Estimate performed by ESC/FMCE in Dec 1994. This estimate was based on actual O&S budgetary figures provided by AFSPC. Current efforts are being made to update this estimate with FY96 figures. Average costs were computed based on O&S costs from FY95-FY99.

Although Canadian forces are on staff/duty within one or more CMU programs, they were not included in the manpower costs as their expenses are paid by the Canadian government. Any specialized training required by Canadian personnel was included.

b. (U) Costs -- (FY 1995 Constant (Base-Year) Dollars in Millions)

| Cost Element         | Avg Annual Cost For<br>CMU Steady State | Avg. Annual Cost For<br>Antecedent |
|----------------------|---|------------------------------------|
| Mission Personnel    | 39.0                                    | N/A                                |
| Operating Costs      | 2.8                                     | N/A                                |
| Hardware Maintenance | 46.1                                    | N/A                                |
| Software Maintenance | 36.4                                    | N/A                                |
| Indirect Support     | 1.0                                     | N/A                                |
|                      | 0.0                                     | N/A                                |
| Total                | 125.3                                   | N/A                                |

The antecedent system, CMC, is only being upgraded and not being replaced in total. The O&S cost for the CMC is captured for the entire complex and not definitized to the level of the replaced systems. Therefore, the antecedent average annual cost is not available.

c. (U) Contractor Support Costs -- None.

All contractor support costs are included in the Hardware Maintenance category and are not an add on cost. This annual average cost is approximately \$4.5M per year (FY95 \$).

E-3 AWACS RSIP, December 31, 1995

5. (U) Related Programs:

E-3 Airborne Warning and Control System (AWACS)

6. (U) Mission and Description:

The purpose of the RSIP modification is to provide the Air Combat Command (ACC) with new and improved capabilities for the E-3 AWACS radar. The AWACS RSIP will provide improvements in radar sensitivity/electronic counter-countermeasures (ECCM) performance, radar performance monitoring and control, and reliability/maintainability (RAM) to maintain system effectiveness against the projected operational environment of the 1990's and into the next century.

The RSIP program is made up of three phases: 1) System Definition/Risk Reduction (Pre-Engineering and Manufacturing Development), 2) Engineering and Manufacturing Development (EMD), and 3) Production Modification. This program will result in hardware and software changes to the AWACS.

The modifications are primarily to the AWACS Surveillance Radar Functional Group (SRFG) which include:

(1) Replaces the existing Radar Data Correlator (RDC) and Digital Doppler Processor (DDP) with the Surveillance Radar Computer (SRC).

(2) Modifies the existing Radar Control Maintenance Panel (RCMP) with dual Cathode Ray Tube (CRT) displays and a new keyboard and cursor control.

(3) Minor redesigns of the receiver, the Stable Local Oscillator (STALO), the Synchronizer, and the antenna phase control electronics, and replaces the analog to digital converter.

(4) Replaces the existing Surveillance Radar Computer Program (SRCP) with a new SRCP.

7. (U) Program Highlights:

a. (U) Significant Historical Developments --

The AFSARC review and approval to start EMD occurred in Dec 88: EMD contracts were awarded on 25 Sep 89 to Westinghouse Electric Corporation for the radar upgrade and to The Boeing Company for the system integration and testing of the radar in the aircraft. The RSIP acquisition schedule was intended to maximize concurrent installation with the Block 30/35 retrofit. Six (6) Brassboard flight tests on Test System-3 (TS-3) were conducted during Feb 90 and Mar 90 successfully demonstrating the RSIP pulse compression waveform concept. The Radar Data Processor (RDP) initial software bench prototype was delivered by subcontractor Control Data Corporation (CDC) to Westinghouse in May 90. The radar algorithm simulations were first integrated in Jun 90 confirming the viability of the RSIP two-slant signal processing technique. NATO began observing the monthly US RSIP Program Management Reviews in Sep 90. RSIP Brassboard

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

E-3 AWACS RSIP, December 31, 1995

7a. (U) Program Highlights (Cont'd):

Data Gathering Flight tests were conducted on TS-3 in Jan 91 - Mar 91. The "Ad Referendum" case directive for NATO's twelve month interim participation in the RSIP effort was approved in Feb 91 for \$18.0M. In Mar 92, the SPO directed the Boeing Company to resequence and reschedule their planned hardware and software integration to be consistent with a revised Westinghouse software delivery and "8.6dB" ground radar sensitivity test schedule.

The NATO/RSIP Cooperative International R&D Agreement was signed in Washington, DC on 7 May 92.

The 8.6 dB Lab Radar Demo was successfully completed on 15 Sep 92 and the government verified test results showing a 10.34 dB improvement in the laboratory environment.

The Fixed Price Determination for NATO RSIP Phase II was approved by OUSD(A) in Nov 92. (NATO Phase II is mainly for installation, check-out and test of the NATO Group A and B kits in a NATO E-3 aircraft.)

Westinghouse contract modification titled "Contract Interpretation Resolution" was issued 29 Oct 93, adjusting the contract schedule and the timing and sizing specification. On 30 Nov 93, TS-3 Installation & Check Out (I&CO) was completed, and first DT&E flight accomplished.

On 14 Jan 94, the NATO RSIP Boeing Phase I contract was definitized (Boeing Phase I is for a NATO Group A kit and development of NATO Airborne Operational Computer Program (AOCP) software.)

On 09 Aug 94, the E-3 AWACS RSIP Acquisition Program Baseline (APB) change request #4 was approved and signed.

The NATO Phase II effort was definitized on 30 Aug 94 and the Westinghouse NATO Phase II effort in Sep 94.

The Qualification Phase of the DT&E Flight Test effort began on 22 Nov 94. AFOTEC, HQ/ACC, NATO, and the AWACS Program Office reached concurrence on a strategy for IOT&E on 1 Dec 94. The Program Office sent the Production RFP and Acquisition Plan to HQ ESC for review in Dec 94.

b. (U) Significant Developments Since Last Report --

The Radar System Improvement Program (RSIP) Operational Requirements Document (ORD) was approved in Feb 95. Post Qualification tests and pre-IOT&E flights were conducted Sep 95. The Program Office took significant steps in early CY95 to resolve three of five requests for equitable adjustment (REAs) by Westinghouse totaling \$53M. Flight qualification, software Formal Qualification Testing (FQT), and in-plant formal qualification were completed with satisfactory radar detection performance.

Due to the unfortunate crash of an Airborne Warning and Control System (AWACS) aircraft in Alaska on 22 Sep 95, the kit quantity requirements have decreased from 34 to 33. ACC has requested the funds be used to fill a longstanding requirement, a second RSIP kit for the Avionics Integrated Support Facility.

- 3 -

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

E-3 AWACS RSIP, December 31, 1995

7b. (U) Program Highlights (Cont'd):

Concurrent US and NATO IOT&E testing began in Oct 95. During the first IOT&E flight a failed relay, not an RSIP component, induced a Class C mishap (reportable damage of \$10,000 or more but less than \$200,000 and/or an injury resulting in a lost workday of eight hours or more). Repairs were completed in Sep 95, a PEO requested Air Force Material Command (AFMC) safety review closed, and the aircraft returned to Air Force Operational Test and Evaluation (AFOTEC) in early Oct 95. The US Initial Operational Test & Evaluation (IOT&E) was comprised of six flights and NATO IOT&E comprised of seven flights.

Preliminary IOT&E results presented in Dec 95 identified deficiencies in radar performance, software maturity/maintainability, Technical Orders/Handbooks, and training. While contractual mechanisms and processes are in place to resolve these deficiencies, two findings were unexpected based on Developmental Test and Evaluation (DT&E) and pre-IOT&E test results. IOT&E results indicated inconsistent radar tracking and poor long range fighter detection in Europe. Conversely, AFOTEC IOT&E results against small targets met or exceeded the ORD values.

A Joint US/NATO Task Force consisting of the Program Office, (AFOTEC), Nato Acquisition Program Management Agency (NAPMA), Nato Early Warning Force Command (NAEWFC), Air Combat Command (ACC), AFPEO/C3, Westinghouse, and Boeing was formed in Dec 95 to resolve the critical IOT&E deficiencies. The performance problems are believed to be primarily software, but have affected areas of the hardware causing functional audits to remain open pending verification of performance fixes.

The US/NATO Production team released a production RFP on 15 Jan 95 for 18 NATO aircraft, 13 US aircraft (two in FY96, two in FY97, four in FY98, and five in FY99), and an option for eight Group B kits for the UK to the Boeing Co. as a prime contractor. After early high cost estimates from Boeing, the US/NATO/UK team worked with Boeing to yield an affordable program for all customers. Business Clearance was approved in Nov 95 and negotiations were completed prior to the NATO Board of Directors (BOD) on 6 Dec 95.

The Air Force Acquisition Executive (AFAE) approved US Low Rate Initial Production (LRIP) on 29 Nov 95.

NATO agreed to provide production schedule protection with funding for Diminishing Manufacturing Source (DMS), production line start-up, and long-lead parts in Dec 95, but postponed their production decision pending IOT&E corrective actions and verification testing. The UK followed NATO and revised their Letter of Acceptance (LOA) to fund the first increment.

The program is expected to satisfy all mission requirements.

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

E-3 AWACS RSIP, December 31, 1995

7c. (U) Program Highlights (Cont'd):

c. (U) Changes Since As Of Date --

While planned IOT&E tests have been completed, formal IOT&E will remain open pending corrective action and critical performance fix verification planned to be complete by Jun 96. Baseline performance data collection began in Jan 96 with instrumented Test System-3 (TS-3) and NATO first (N1) flight tests in Europe.

RSIP Low Rate Initial Production (LRIP) Production contract awarded 9 Feb 96.

8. (U) Threshold Breaches:

There is a procurement cost breach to the AFAP Acquisition Program Baseline dated August 9, 1994. A program deviation report and a baseline change request will be submitted. There are no Runn-McCurdy unit cost breaches.

9. (U) Schedule:

a. (U) Milestones --

|                                      | <u>Development<br/>Estimate</u> | <u>Approved<br/>Program</u> | <u>Current<br/>Estimate</u> |

| Required Assets Available            | N/A                             | DEC 99                      | DEC 99                      |

b. (U) Previous Change Explanations --

The Dec 90 SAR reported a planned CDR completion date of May 91 which was based on holding the SRC CDR in Jan 91 and the RCMP and Software CDRs in May 91 due to delayed completion of software requirements analysis and software documentation and design change to cathode ray tube displays.

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

R-3 AWACS RSIP, December 31, 1995

9b. (U) Schedule (Cont'd):

The Dec 90 SAR reflected an Air Force decision to await the completion of qualification testing before initializing procurement actions and so Advance Procurement Authorization was dropped in June 93 in favor of Long Lead Procurement in Nov 93.

The Dec 91 SAR reported that Critical Design Review (CDR) was conducted incrementally. Change to cathode ray tube display design delayed RCMP CDR. Software CDR delayed to complete software requirements analysis and software documentation. The software delay caused an anticipated delay in TS-3 I&CO, Flight Test DT&E, IOT&E, Physical Configuration Audit (PCA), Production decision and Trial Installation.

The Dec 92 SAR reported that the following RMD milestones were delayed: TS-3 I&CO, Flight Test DT&E, IOT&E and PCA. This was mainly due to Associate Contractor Westinghouse not being able to develop/integrate software at the rate anticipated at CDR. Also the Low Rate Initial Production (LRIP) decision and the Required Assets Available (RAA) milestones had slipped due to a two year delay in the start of production directed by the FY 94 President's budget.

The Dec 93 SAR reported I&CO was changed from Oct 93 to Nov 93 due to Westinghouse not being able to develop/integrate software at the anticipated rate. The DT&E flight test completion date was changed from Nov 94 to Jan 95 to realign the dates to the updated test schedule. IOT&E start date was changed from May 95 to Aug 95 to allow time for flight data reduction and report approval. IOT&E completion dates were adjusted accordingly. PCA was changed from Sep 95 to Dec 95 since PCA is defined as the final PCA session which should occur after all action items are complete. LRIP decision was changed from Oct 95 to Nov 95 with the Trial Installation changing by one month accordingly.

The Sep 94 SAR reported flight test DT&E completion has moved from Jan 95 to Mar 95 to accommodate start up problems at the beginning of flight test. FMD 60 dated 11 May 94 changed the definition of IOC from 4 aircraft to 5 aircraft. The APB was updated on 09 Aug 94 to reflect the change in IOC and RAA dates.

The Dec 94 SAR reported the start of IOT&E to have changed from Aug 95 to Jul 95.

c. (U) Current Change Explanations --

(Ch-1) IOT&E start was delayed from Jul 95 until OCT 95 due to the Class C mishap which was induced due to a failed relay (not an RSIP component) on the first IOT&E flight.

\*\*\* UNCLASSIFIED \*\*\*

9c. (U) Schedule (Cont'd):

(Ch-2) While planned IOT&E tests have been completed, formal IOT&E will remain open pending corrective action and critical performance fix verification planned to be complete by Jun 96.

(Ch-3) Due to the delay regarding IOT&E, PCA is not expected to be complete until Mar 96.

d. (U) References --

(U) Development Estimate:

FY 91 Amended President's Budget, 29 Jan 90

(U) Approved Program:

AFAP Approved Acquisition Program Baseline dated August 09, 1994.

Development: Excludes 6 RDT&E units which are not fully configured and items. This number previously five, includes the Test System-3 (TS-3), Avionics integration Lab (AIL), Reliability Verification Testing (RVT), Environmental Qualification (EQ), Performance Qualification Lab (PQL). Now the number is six due to the inclusion of NATO 1 (N1).

Production LRIP quantities are numbered at four; two in FY96 and two in FY97.

c. (U) Foreign Military Sales/International Cooperative Programs -- NATO/UK:

The RSIP Memorandum of Agreement (MOA) between the USAF and the NATO Airborne Early Warning and Control (AEW&C) Program Management Organization (NAPMO), signed on 7 May 92, sets forth the terms for the RSIP Cooperative Development Program. We modified the two U.S. RSIP RMD contracts with Boeing and Westinghouse for the NATO RSIP Phase I effort and added the Boeing Phase II effort on 14 Jan 94 and the Westinghouse Phase II effort on 21 Jan 94. During Phase I Westinghouse is providing one more RSIP Group B radar set modification kit and instrumentation for the NATO E-3A aircraft. Boeing Phase I effort is providing one RSIP Group A Kit and the NATO Airborne Operational Computer Program (AOCP) software. In Phase II, Westinghouse will develop the logistics support for the RSIP hardware and software components and support Boeing during the test program; Boeing will install and integrate the RSIP prototype Group A and B kits into the NATO E-3A test aircraft and conduct the test program. The AWACS SPO, working with NATO, developed a comprehensive strategy to implement a joint U.S. - NATO development test program for RSIP. Under the joint test concept, NATO participates in testing on the

U.S. test aircraft and accomplishes the majority of NATO testing on the same aircraft. Joint test was implemented as part of the Phase II portion of the NATO RSIP effort. On 31 March 1993, the United Kingdom (UK) signed a \$5.6M Letter of Offer and Acceptance (LOA) to conduct a pre-production study for incorporating production US/NATO RSIP kits into the fleet of seven (7) UK E-3D AMACS aircraft. The study consisted of two parts: Phase IA provided technical information sufficient to identify differences in the UK configuration while Phase IB designed any adaptations necessary and prepared the production Request for Proposals (RFPs) and LOA. The Boeing Company was placed on contract (EST 93-UK-04A) 13 July 1993 with the Westinghouse Corporation placed on directed subcontract on 1 September 1993 to support Phase I. Including the \$5.8M Phase IB LOA option, the study lasted for approximately two years. UK requirement is to buy production kits for all 7 UK aircraft and 1 ground laboratory.

The US/NATO/UK have joined together and awarded a contract on 9 Feb 96 to purchase 28 aircraft worth of RSIP kits (2 US, 18 NATO, and 8 UK) under the production program. Furthermore, the US has contracted for 11 more aircraft worth of kits in three follow-on options in FY97, FY98, and FY99.

The significant drop in inflation rates has forced the generation of artificial changes to the program base year baseline. With a negotiated and awarded production contract and options, we cannot adjust the then year budget profile for this program. For this reason we have discontinued the use of the SAR as the tool to indicate a program breach.

b. (U) Previous Change Explanations --

RD&E

Economic: Revised economic escalation indices.

Schedule: Revised production schedule to allow for completion of qualification testing. Stretched FY 1989-94 program through FY 1996.

Engineering: Depot activation costs transferred to RD&E funding (FY 92-93) from procurement funding (FY93). Depot development descope. FY 91 Congressional reduction; Must be covered by NATO funding. Specification changes to existing contract. Reduction of US program due to NATO share of development cost.

Estimating: Funded an unfunded requirement to cover contract

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

E-3 AWACS RSIP, December 31, 1995

13b. (U) Cost Variance Analysis (Cont'd):

termination liability requirements. Revised program estimate of program requirements. Internal AWACS reallocation between mod projects used to cover contract termination liability. RSIP portion of AWACS Desert Storm assessment. Adjustment for current and prior year inflation. Revised estimate of engineering change orders. Revised estimate of program office support requirements. Revised estimate due to impact of inflation indices.

Procurement

**Economic:** Revised economic escalation indices. Economic adjustment for negative program change.

**Schedule:** Revised production schedule to allow completion of qualification testing. Slip in program start from FY 94 to FY 96 (prod. break & econ. esc. affect incl.) & completion from FY 98 to FY 02.

**Estimating:** Transfer of Installation costs to Procurement from O&M. Revised estimate of Group A/B Kits. Correction of categorization in Dec 90 SAR for Group A/B Kits. Revised estimate of Group A kits based on EMD actuals. Revised estimate of Group B kits based on EMD actuals. Revised estimate of installation based on install hours and labor hourly rate increase. Revised estimate of non-recurring requirements. Realigned funding to year of kit install to comply with funding policy. Due to change in Contract Acquisition Strategy from Assoc/Assoc to Prime/Sub, contract management cost moved from SPO (-13.3) to Prime Contractor (+15.6).

**Support:** Depot Activation costs (FY 93) transferred to RDT&E funding (FY92-93). Initial Spares funding reduced. Support estimate updated (Data, Support Equip, Sim/Trainers costs increased). Correction of categorization in Dec 90 SAR for other support costs. Revised Initial Spares requirement. Revised funding estimate for modifications to simulator/trainers and data. Additional PSE requirements. Data estimate revised. Increase to SPO support. Additional requirements for Avionics Integration Support Facility, Commodity Mod Kits, and Interim Contractor Support. Revised estimate for Initial Spares. Due to change in Contract Acquisition Strategy from Assoc/Assoc to Prime/Sub, contract management cost moved from SPO (-13.3) to Prime Contractor (+15.6).

|   | Cost Variance | Schedule Variance |
|---|---------------|-------------------|
| Previous Cumulative Variances           | \$-65.2       | \$-2.6            |
| Cumulative Variances To Date (12/31/95) | \$-49.7       | \$-0.2            |
| Net Change                              | \$15.5        | \$2.4             |

Explanation of Change:

Current CPR analysis projects a best case of \$328.2M at completion if WEC performs remaining work with no variance.

The net change of \$15.5M from -\$65.2M to -\$49.7M unfavorable cost variance reflects a consistent improvement in maintaining the cost overrun which was primarily due to the Radar Data Processor Operational Software build. The net change of \$2.4M from -\$2.6M to -\$0.2M unfavorable schedule variance is due to correction of discrepancies found during flight testing.

17. (U) Production Rate Data:

- a. (U) Deliveries to Date -- 0/0.
- b. (U) Approved Design-to-Cost Objective -- N/A.

18. (U) Operating and Support Costs:

- a. (U) Assumptions and Ground Rules --

The operating and support cost estimate for AWACS RSIP was updated in Aug 95. The concept of operation is for a fleet of 32 aircraft, which does not include the TS-3, flying 1000 hours per year each with two-level maintenance. In the updated O&S cost, a comparison was made between the Post-RSIP and the Pre-RSIP configurations. These two estimates were separately prepared to reflect the annual steady-state cost, the phase-out of the predecessor system AN/APY-1/2 radar and the phase-in to the steady-state of the Post-RSIP modification to the AN/APY-1/2 radar. The Pre-RSIP system estimated FY96 as the steady-state year with complete phase out by FY04. The O&S cost of the Pre and Post systems are used to compare the differences in support cost in the steady-state mode. The mission personnel element includes the cost of pay and allowances for officer, enlisted, and civilian personnel required to operate, maintain, and support a discrete electronic system. Unit level consumption includes

E-3 AMACS RSIP, December 31, 1995

18a. (U) Operating and Support Costs (Cont'd):

consumables, condemnations, second destination transportation, and organizational level simulator maintenance. The depot maintenance includes the cost of labor, material, and overhead incurred in performing major overhauls or maintenance on an electronic system, its components, and associated support equipment at centralized repair depots, contractor repair facilities, or on site by depot teams. The contractor support includes the cost of contractor labor, materials, and depreciable assets used in providing all or part of the logistics support to a weapon system, subsystem, or related support equipment. Sustaining support includes the cost of replacement support equipment, modification kits, sustaining engineering, software maintenance support and simulator operations. Indirect support includes the costs of personnel support for specialty training, permanent changes of station, and medical care. Indirect cost also includes the costs of relevant host installation services, such as base operating support and real property maintenance.

b. (U) Costs -- (FY 1989 Constant (Base-Year) Dollars in Millions)

Joint STARS GSM, December 31, 1995

**6. Mission and Description:**

The Joint Surveillance Target Attack Radar System (Joint STARS), is a surveillance, battle management and targeting radar system. It is a Joint Army and Air Force Program with the Air Force as the executive service. The Joint STARS radar is an airborne multimode radar system, incorporating an electronically scanned antenna and combining both Moving Target Indicator (MTI), Fixed Target Indicator (FTI) and Synthetic Aperture Radar (SAR) functions. The radar is carried aboard a modified E-8 Aircraft (AN/TSQ-XXX) and broadcasts processed radar data to the Army Ground Station Modules (GSM) through an omnidirectional data link. GSMS also receive and process intelligence data from Unmanned Aerial Vehicles (UAV) and Commander's Tactical Terminal (CTT). Joint STARS fills a critical need for an effective capability to detect, delay, disrupt, and destroy first and second echelon mobile targets. Joint STARS is unique because it is a closed loop system for real-time detection, tracking, and attack information of enemy ground targets. The Army Corps requires wide area surveillance to understand enemy force buildups and scheme-of-maneuver, in order to apply effective and timely maneuver of forces, battlefield management, and targeting of artillery, rockets and stand-off missiles. There is no other system planned to provide this data in real-time. Joint STARS provides commanders at Tactical and Operational Echelons a near real-time, wide area surveillance system to monitor enemy force movements into and through the joint battle area. This allows air and ground commanders to take timely actions to shape the battle and decisively engage the enemy with fire and maneuver.

**7. Program Highlights:**

**a. Significant Historical Developments --**

In May 82, an OSD/USDRE memorandum directed that a Joint Air Force/Army Program Management Office be established, under Air Force lead, to develop a single multi-mode target acquisition and weapon guidance system. The Joint STARS Program resulted from this directive and was organized from the PAVE MOVER and SOTAS Program Offices. The Army Ground Station Module (GSM) Full Scale Engineering Development (FSED) contract was awarded to Motorola corporation in Aug 84. A Downsized Ground Station Module (DGSM) FSED was awarded Mar 86. In Sep 87, the Army directed the acquisition of nine Limited Procurement Urgent (LPU) Ground Station Modules (GSMS). These LPU variants receive, process and display OV-1 Mohawk SLAR (Side Looking Airborne Radar) radar data. The DGSM was subsequently stopped while still in the design phase, leaving two GSMS at the time (FY87); the Interim GSM (IGSM) and the LPU GSM. Both configurations were mounted on Army standard five-ton trucks, and shared a majority of payload subcomponents. In Dec 1988, the GSM program was restructured to capture all user requirements, synchronize GSM and aircraft fieldings, and to field GSMS in time to support other 'Deep Battle' programs. In order to achieve these

7a. Program Highlights (Cont'd):

objectives, the existing GSM was to be enhanced in a phased effort (IGSM, LPU, Block I, Block II). Block I improvements entail downsizing the electronic suite, increasing operational capabilities, and enhancing modularity of LRUs (Line Replaceable Units) for standardization and subsequent export to other Intelligence and Electronic Warfare (IEW) systems. At this time, Block II improvements involved integrating the Block I mission equipment and functions into an Electronic Fighting Vehicle System (EFVS) ( a Bradley FVS variant) in order to meet Nuclear Biological Chemical (NBC) and nuclear hardening requirements of heavy divisions/ corps. In Sep 90, Operational Field Demonstration (OFD-1) successfully demonstrated the JSTARS system (Aircraft/GSM) capabilities to NATO and US Forces in Europe. The JCS ordered the deployment of the Joint STARS system, aircraft and Ground Station Modules (GSMs) to Operation Desert Storm in December 90. The order came at the request of CINCCENT (Commander-in Chief Central Command). In March 91, ODCSOPS developed a revised distribution plan which aligned GSM fieldings with anticipated future force structure and operational requirements. Based on this new distribution, quantities increased from 90 to 125. During the FY92 Defense Appropriation review process, the GSM budget request was increased \$20M. These funds were directed for developing a light weight GSM. This increase accelerated start-up of the Light GSM (LGSM) EMD effort to FY92. The Joint STARS FY93 RDTE program was increased by \$35M by Congress to complete the acceleration of the Block I Light EMD effort. The current ORD modifies the nomenclature of the various GSM Blocks. Since the system capabilities and Prime Mission Equipment (PME) are essentially the same for all GSMs produced through FY95, the Block II and IIA programs have been redesignated as the Block I Heavy GSM (HGSM) and Block I Light GSM (LGSM) respectively. Consequently, the Block I and Block III GSMs have been redesignated the Block I Medium (MGSM) and Block II (Common Ground Station). The Common Ground Station (CGS, AKA Block III) is anticipated to also be configured in Light and Heavy variants. Based on successful testing the Army System Acquisition Review Council (ASARC) approved Low Rate Initial Production (LRIP) of 12 MGSMs on 10 May 93. The Defense Acquisition Board (DAB) also approved the MGSM LRIP and the exit criteria for the FY95 LGSM LRIP on 23 July 93. The JSTARS revised Acquisition Program Baseline (APB) was approved by the Under Secretary of Defense for Acquisition (USD(A)) on 11 August 93. In addition the (USD(A)) approved the acceleration of the CGS, which will result in an evolutionary P3I program beginning in FY96. The approval of the Acquisition Decision Memorandum (ADM) accelerating the CGS was formally received on 6 November 93. The GSM was designated an Army Lead program for the application of Acquisition Streamlining/Reform initiatives by the Deputy Secretary of Defense on 23 August 1994. The Joint STARS GSM is

7a. Program Highlights (Cont'd):

participating in a NATO demonstration and experimentation program to evaluate alternative systems to provide airborne reconnaissance capability in support of NATO Operations. In October 1994, the GSM and JSTARS aircraft participated in EUROSTAR 94, which resulted in continued NATO interest in the program. In 1995, NATO created an Embryonic Project Office (EPO) to pursue additional cooperative efforts.

b. Significant Developments Since Last Report --

The Embryonic Project Office (EPO) has been established in Brussels, Belgium to pursue acquisition of a NATO Alliance Ground Surveillance capability. On 15 March 95 an Army System Acquisition Review Council (ASARC) was held to obtain approval for the LRIP of 10 Light Ground Stations Modules (LGSM). This was the initial ASARC conducted under the new ASARC Streamlining Process Action Team (PAT) charter. The ASARC approved the LRIP and on 2 May 95, the Army Acquisition Executive signed the Acquisition Decision Memorandum (ADM). The LGSM LRIP contract was awarded 31 July 95 to Motorola Corp., Scottsdale, Arizona with first delivery scheduled for October 1996. The Common Ground Station competitive solicitation was formally released on 6 June 95. The solicitation was based on a performance specification and encouraged potential offerors to make maximum use of best commercial practice. The JSTARS Enhanced ground Station Module (EGSM) was displayed during the Paris Air Show in June 95. The EGSM was subsequently sent to the SHAPE Technical Center (STC) to be used as part of a US initiative to demonstrate and study interoperability of Joint STARS in the NATO command and control environment. The Common Ground Station LRIP contract was awarded on 14 December 1995 via full and open competition to a team headed by Motorola Corp. of Scottsdale, Arizona. The Acquisition Program Baseline and Acquisition Strategy Report approving the CGS approach and authorizing award of an eight year competitive contract (basic year plus seven option years) provides for potential significant unit price reductions based on range quantity pricing. The higher quantities range can provide CGS capabilities to other services or US Allies. The first two years of the CGS contract were designated as LRIPs in order to allow the delivery and test of the performance based hardware prior to the Milestone III now scheduled for May 98. On 2 December 95 the Chief, Joint Chiefs of Staff (CJCS) tasked Joint STARS to support Operation JOINT ENDEAVOR. A total of twelve GSMS and two aircraft were deployed and theater Initial Operating Capability (IOC) was declared on 27 December 1995. The planned Multiservice Operational Test and Evaluation was canceled. However, data was collected and an operational evaluation conducted in concert with the deployed operations.

The Joint STARS system is expected to satisfy mission requirements.

9a. Schedule (Cont'd):

Milestones (Cont'd) --

|                                  | Development<br><u>Estimate</u> | Approved<br><u>Program</u> | Current<br><u>Estimate</u> |
|----------------------------------|--------------------------------|----------------------------|----------------------------|
| First Unit Equipped              | N/A                            | SEP 97                     | SEP 97(Ch-5)               |
| Organic Support Capability (CGS) | N/A                            | SEP 97                     | SEP 97(Ch-5)               |

b. Previous Change Explanations --

Force DT&E was deleted per HQDA message R202140Z JUL 89. Milestone name changed from Joint IOT&E (Initial Operational Test & Evaluation) to Joint SLPV/GD/OA (System Level Performance Verification/Government Development Test and Evaluation/Operational Assessment) Block I Medium GSM (MGSM) Contract Award (CA) was changed to reflect actuals. First Unit Equipped (FUE), Block II Heavy GSM (HGSM) FDT&E, PDR and CDR were changed to correct program office reporting errors. Approved Acquisition Program Baseline milestones added to SAR reporting. The GD and OA milestones were Air Force only and have been deleted. Late subcontractor material deliveries delayed Block I Medium (MGSM) TT/UT, Milestone III (LRIP), and CA. This in turn caused Block I delays to the First MGSM Production Delivery (FPD), First Article Test (FAT), and FUE. The acceleration of the Block IIA Light GSM (LGSM) has caused delays in the Block II (HGSM) FSD Award, CDR, Production IPR, Production Award, FPD and FUE. The Block II (HGSM) FDT&E start and complete is no longer an applicable milestone per TEMP and has been deleted. Block I Medium Milestone III and Block I CA changed from Mar 93 to Jul 93 due to the slip in the technical and user tests. The Milestone III was also changed to an LRIP decision. Block II (HGSM) FSD Award changed from Jan 93 to Sep 93 due to extended preparation and review of the technical specifications and solicitation/proposal. The Block II (HGSM) EMD program has subsequently been deleted. New milestones introduced concurrent with the approval of new APB dated 11 August 1993. MGSM awarded on LRIP basis, actual Contract Award Date shown. HGSM characteristics deleted in accordance with APB revisions. MGSM PQT slipped due to end item mods. GSM depot changed to N/A as LCCS implemented after log study recommendation. MOTE slips due to delays in aircraft software maturity. LGSM awarded as LRIP, thereby negating need for MSIII. LGSM 1st Del, FUE and Org Spt delayed based on late LRIP award and longer than anticipated production lead time.

c. Current Change Explanations --

The following milestones changed from the previous SAR:

| Milestone | From | To | Reason |
|-----------|------|----|--------|
|-----------|------|----|--------|

b. Previous Change Explanations --

Addition of GSM Approved Acquisition Program Baseline characteristics to SAR reporting. IGSM MTBF, MTBOMF, MTTR and Max-TTR have been changed to reflect demonstrated performance. MTBF and MTBOMF changed to reflect demonstrated results achieved during testing of the system. New characteristics were added to reflect approval of revised APB dated 11 August 1993. LGSM MTBOMF changed to 70 hours to correct error in previous SAR. Interoperability message requirements decreased from 19 to 7 due to release of TACFIRE 10 which reduced the number of preformatted msgs available for interface. GSM MTTR, MGSM Wt and Imagery Stg, and LGSM WT adjusted to correct errors in previous SAR. MGSM/LGSM Max Rpr deleted due to revised RAM requirements. HGSM Nuclear Surv deleted as system is no longer required.

c. Current Change Explanations --

(Ch-1) All are new data elements included in the new approved APB of October 5, 1995.

| b. Quantity --           |                                |                            |                            |
| Development (RDT&E)      | 15                             | 21                         | 18                         |
| Procurement              | <u>97</u>                      | <u>104</u>                 | <u>143</u>                 |
| Total                    | 112                            | 125                        | 161                        |

The procurement quantities noted above include a total of up to 60 LRIP units (12 Medium GSMS, 10 Light GSMS (8 on contract) and up to 38 CGSS). It should be noted that the Common Ground Station LRIP quantity of 16 units in FY96 exceeds the statutory guideline of 10% for LRIP as a percentage of total production. The maximum number of CGSS that can be procured under LRIP is 38 of a total contract of 137. Although this exceeds the 10% ceiling, it was approved based on the economic advantages as well as the documented low risk to the CGS program.

b. Previous Change Explanations --

RDT&E

Economic: Revised escalation indices.  
Quantity: Increased prototype quantity.  
Engineering: ROC revisions due to Operation Desert Storm lessons learned. Cost adjustments to develop Block II variants. Accelerated Light GSM R&D effort.  
Estimating: Refined and rephased program estimate. Adjustment for current and prior inflation. Revised historical data to reflect actual.

Procurement

Economic: Revised escalation indices.  
Quantity: Quantity increased to 104 GSMS.

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

Joint STARS GSM, December 31, 1995

13b. Cost Variance Analysis (Cont'd):

Schedule: Accelerated procurement schedule during FY95-02.  
Delay production schedule FY99 and out.  
Engineering: Reduced cost from deleting retrofit Block I Heavy  
variant.  
Estimating: Refined program estimate. Adjustment for current  
and prior inflation. Revised hardware cost based  
on LRIP contract award.  
Support: Initial spares and support equipment changes.  
Revised estimate for spares/support requirements.

Recurring costs in FY02 are refurbishment costs for 12 MGSM (FY93,94) and 8 LGSM (FY95). These costs are to upgrade the GSMS to the Common Ground Station (CGS) capability and involves adding sensor interfaces, boards, black boxes, racks & cables etc.. Expenditures and obligations reflect program office records as of 03/08/96.

| Procurement | 21/21              |

b. Approved Design-to-Cost Objective -- N/A.

A Design-to-Cost waiver was obtained from HQDA in June 1992 for this program and is therefore not applicable.

18. Operating and Support Costs:

a. Assumptions and Ground Rules --

O&S costs were based on LPU & IGSM models being fielded for 5 years. All other GSM models are presumed to have a 20 year life. Sustainment is based on cumulative quantity of fielded systems and appropriate personnel necessary to maintain the system. The source of the O&S data is the January 1995 Joint STARS (Army) Baseline Cost Estimate. There are no antecedent systems.

**6. Mission and Description:**

The Advanced Field Artillery Tactical Data System (AFATDS) is a digital, integrated battlefield management and decision support system. It will function at Battery through Corps and above level as one of the five battlefield automation systems of the Army Tactical Command and Control System (ATCCS) utilizing the Common Operating Environment (COE) architecture. AFATDS utilizes evolving commercial computer technology of the ATCCS Common Hardware/Software (CHS) procurement.

Based on the organizational structure to be supported, AFATDS hardware items will include the following: Fire Support Control Terminals (FSCT), Lightweight Computer Units (LCU), Power Converter Group, Tactical Communications Interface Module, Printer, Tactical Display Device, Local Area Network and installation kits tailored to the Force Structure and available vehicles. This will all be ATCCS Common Hardware.

AFATDS is designed to overcome the vulnerability, limited functionality, central processing and training limitations of present artillery battalion, brigade, division and corps fire direction systems. AFATDS will take advantage of advancing software technology, graphics, decision aids, and embedded training to expand the Fire Support functions. AFATDS is the Fire Support node of the ATCCS providing advanced software automation assistance to the Fire Support elements and interfacing with all subsystems subordinate to AFATDS and other nodes of ATCCS via the standard communications media available to the force. AFATDS will provide 27 Fire Support functions, grouped in five Fire Support operational needs (Fire Support Execution, Fire Support Planning, Movement Control, Field Artillery Mission Support and Field Artillery Fire Direction Operations).

Responsiveness, survivability, and continuity of Fire Support Operations will be enhanced via dispersed processing centers, intelligent remote (work stations) terminals, a distributed data base management system and distributed operations for Fire Support Officers at the Infantry and Armor battalion/brigade levels. AFATDS will interface/interoperate via standard communications media with all functional control elements of existing and future Army Fire Support Systems, other ATCCS Battlefield Functional Area (BFA) Systems, other services employing Fire Support Joint Interoperability Tactical Command and Control Systems message standards and Allied Forces using NATO Fire Support Standards.

Fire Support Ada Conversion (FSAC) and Initial Fire Support Automated System (IFSAS) are associated programs that are included in the AFATDS Acquisition Program Baseline (APB).

AFATDS, December 31, 1995

6. Mission and Description (Cont'd):

FSAC provided an accelerated fielding of ATCCS Common Hardware (CH) until the AFATDS software becomes available. FSAC converted the existing Battery Computer System (BCS) technical fire control software to Ada and replaced the existing BCS hardware with the Lightweight Computer Unit (LCU). These LCUs will ultimately be utilized as a host for the AFATDS software.

IFSAS replaced the Variable Format Message Entry Device (VFMEED) and Battalion TACFIRE and provided the National Guard with an initial automated capability. IFSAS replaced the TACFIRE equipment with the LCU based AN/GYK-37(V)1 hardware with Lightweight TACFIRE (LTACFIRE) software ported to the LCU. Like FSAC, IFSAS reflects an accelerated fielding of the ATCCS CHS until AFATDS software becomes available. IFSAS is being fielded by the Marine Corps under a separate program.

7. Program Highlights:

a. Significant Historical Developments -- None.

b. Significant Developments Since Last Report --  
In 1995 the AFATDS program completed development of Version 1 software, underwent both a second Force Development Test and Experimentation (FDTE II) and Initial Operational Test and Evaluation, and received its Milestone III Production Approval.

The contractor, Magnavox, concentrated on correcting errors and optimizing the Version 1 software. FDTE II was held in May 95 and, although a number of software deficiencies were identified, the system showed significant improvement from the initial FDTE held in 1994. With completion of Regression Testing by the end of May, all significant errors had been identified and corrected. There were a few open System Test Reports (STR) that remained, but it was determined that they would have no impact on the IOTE, and would be corrected under a separate software release.

IOTE was conducted in Aug 95 at Ft Hood Tx, based on the Test and Evaluation Master Plan (TEMP) which was signed 5 Aug. The test was conducted by TEXCOM and evaluated by OPTEC. Four issues resulted from the test: availability of generator power which will be corrected with the Tactical Quiet Generator; a doctrine issue which will be corrected through Tactics, Techniques, and Procedures; and 2 software issues which have been since corrected.

Based upon the recommendation of the Military Deputy Review held 1 Dec, the AAE determined that a formal ASARC was not required and authorized proceeding with full rate production and fielding of AFATDS. On 13 Dec 95, the Army Acquisition Executive (AAE) signed the Acquisition Decision Memorandum (ADM) for the AFATDS Milestone

- 3 -

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

AFATDS, December 31, 1995

7b. Program Highlights (Cont'd):

III. The ADM also approved the type classification of AFATDS as Standard, the continued development of the AFATDS software to reach the objective program, and confirmed the Program Executive Officer, Command, Control, and Communications Systems (PEO C3S) as the decision authority for future hardware acquisitions.

Version 2 development proceeded on schedule through 95. The effort was rebaselined to reflect the reprioritization of functionality over the remaining versions, and the incorporation of the Army's Common Operating Environment (COE). In addition, the software versions were redesignated as Software Releases to better reflect the current strategy of releasing software to the field in annual increments, instead of the previous plan to release software versions every two years. There was no change in the overall functionality included in the system.

AFATDS also participated in exercises and tests across the world. In Aug, one direct support artillery battalion and one MLRS platoon from the AFATDS IOTE test unit (1st CAV) were deployed to Kuwait. These units took AFATDS with them as their go-to-war system. AFATDS participated in the Joint Intrinsic Action Exercise in Kuwait. Intrinsic Action culminated in a Coalition Combined Arms Live Fire Exercise with US and Kuwaiti Army forces and US and Kuwaiti Close Air Support controlled by the 1st ANGLICO, 1st US Marine Expeditionary Force. The demonstration was observed by the Chief of Staff of the Kuwaiti Army, the US Ambassador to Kuwait, and other high ranking civilian and military officials.

Technical testing was performed with the fire support control systems from Britain (BATES), Germany (ADLER), and France (ATLAS) in Oct 95. This testing demonstrated the ability of the systems to pass messages, and to plan and execute fire missions across various interfaces.

AFATDS also became more involved in the joint arena. PM FATDS is actively participating in the Naval Surface Fire Support (NSFS) demonstrations. The objective is to demonstrate the initial capability to automate the NSFS functions in an amphibious landing and Joint Force Operations. The demonstrations will prove out AFATDS capability to perform a large portion of the NSFS function and to identify capabilities for future incorporation. AFATDS interface to the Air Force Contingency Theater Automated Planning System (CTAPS) was briefed to the Chiefs of Staff of the Army and Air Force as part of the Army Air Force Warfighter Talks. There was support for the AFATDS link to CTAPS which will provide an automated mechanism for the Army Battle Command System to transmit and receive the Air Tasking Orders.

\*\*\* UNCLASSIFIED \*\*\*

AFATDS, December 31, 1995

7b. Program Highlights (Cont'd):

AFATDS is actively involved in Task Force XXI which will digitize the battlefield and provide seamless digital command and control capabilities throughout the fighting force. AFATDS will be fielded to the 4th Infantry Division in FY96 to prepare for Task Force exercises.

The FSAC and IFSAS programs continued fielding and training in accordance with the DCSOPS approved fielding plans.

AFATDS is expected to satisfy the mission requirements.

c. Changes Since As Of Date --

After the current Acquisition Program Baseline was approved, the requirements for the Battlefield Coordination Element, Prepositioned Material (POMCUS) and the National Training Center were added by the Office of Deputy Chief of Staff for Operations and Plans (ODCSOPS). These changes have affected the program cost and schedule.

8. Threshold Breaches:

There are no breaches to the approved Acquisition Program Baseline (APB) dated 5 Feb 96. There are no Nunn-McCurdy unit cost breaches.

9. Schedule:

a. Milestones --

|   | Development<br><u>Estimate</u> | Approved<br><u>Program: PdE</u> | Current<br><u>Estimate</u> |

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

AFATDS, December 31, 1995

9b. Schedule (Cont'd):

b. Previous Change Explanations --

The CHS Hardware Order changed from Nov 92 to Oct 93, and the CHS Hardware Delivery changed from Jun 93 to Apr 94 due to the elimination of FY93 Procurement funds. The milestones slipped again to Jan/Jun 94, respectively, due to the late release of funds.

FDTE Complete was rescheduled from Jul 93 to Feb 94. IOTE Begin and Complete moved from Jan 94 to Jul 95 and Feb 94 to Aug 95, respectively. The ASARC Milestone III moved from Apr 94 to Nov 95. Based on the contract negotiations for AFATDS V1, the FDTE test window was Jun/Jul 93. After contract award the Vice Chief of Staff established prescribed test windows for ATCCS testing with III Corps assets at Fort Hood to preclude perturbations to the warfighting mission of III Corps units in FY93. The test windows were May/June and Sept/Oct. The AFATDS V1 schedule precluded participation in the May/June 93 test window. As such, the AFATDS V1 FDT&E was moved to the Sept/Oct 93 test window. However, agreements at the AFATDS Operational Test Readiness Review, held Aug 93 at Ft Sill, moved the FDTE start date from Oct 93 to Jan 94 to allow time to develop quality training for FDTE test personnel. Further schedule adjustments were made to correct deficiencies in the FDTE. Current estimates for FUE IOTE, ASARC, IOC, C3I Committee Review, IOC V1 and Fielding Total Force were adjusted accordingly.

The First Unit Equipped V1 moved from Sep 93 to Aug 95. FUE for Version 1 was originally scheduled for Sep 93 to coincide with the completion of FDTE (DCSOPS guidance). FUE is now scheduled to coincide with the last month of the system testing, i.e., IOTE V1 (Aug 95) and is consistent across all BFA's.

The Initial Operational Capability V1 moved from Jan 95 to Jul 96. The prior IOC was based on refurbishment of test units and planned for Jan 95. The IOC changed based on the first production unit fielded after M/S III, scheduled for Jul 96.

The Version 1 development effort was delayed due to unexpected complexity in the software design. Version 1 milestones were adjusted as follows: Critical Design Review (CDR) V1 occurred in Jun 92 vice May 92 and System Software Test (SST) V1 occurred in Nov 93 vice May 93.

The development strategy for Version 2 was changed to expedite software upgrades and to provide more timely improvements to the field. This change resulted in Version 2 being developed in two separate packages: Version 2.0 and Version 2.1. Accordingly, several Version 2 milestones have been deleted from the APB:

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

AFATDS, December 31, 1995

9b. Schedule (Cont'd):

Preliminary Design Review (Jun 94), Critical Design Review (Jan 95), System Software Test (Sep 95), Force Development Test and Experimentation (Jan 96) and First Unit Equipped (Jun 96). Additionally, several milestones have been added to the baseline to detail the Version 2.0 and Version 2.1: Version 2.0 System Design Review (Jan 95), Version 2.0 System Software Test (Feb 97), Version 2.0 Operational Test (Aug 97), Version 2.1 System Design Review (Jan 96), Version 2.1 System Software Test (Feb 98) and Version 2.1 Operational Test (Aug 98).

The V3 Acquisition Alternative Selection changed from Dec 92 to Apr 93 to allow for Government review of the quality of Version 1 software prior to determining the V3 acquisition strategy. The milestone was actually accomplished in Jun 93.

Version 3 Software Development - Begin changed from Nov 94 to Jul 97 because of delays in Version 1 completion which also delayed subsequent versions of the software development.

c. Current Change Explanations --

(Ch-1) Version 2.0, 2.1 and 3 have been redesignated AFATDS '97, '98, '99 and '00 to better reflect the planned release of software functionality. The following milestones are no longer applicable: System Design Review V2.0; Version 3 SW Development-Begin; System Software Test V2.0; Operational Test V2.0; System Software Test V2.1; Operational Test V2.1. The following milestones have been added: Software Release AFATDS '97; Software Release AFATDS '98; Software Release AFATDS '99; Software Release AFATDS '00.

(Ch-2) The IOTE was completed Sep 95. ASARC occurred Dec 95. These milestones were expected to be completed Aug and Nov 95 respectively. The MILDEP was briefed 1 Dec 95 for the AFATDS Milestone III Decision. The MILDEP waived the requirement for a formal ASARC at that time. The requirement for the C3I Committee Review was also waived, therefore the milestone previously identified as Nov 95 is now shown as N/A.

(Ch-3) The following milestones were changed to match the planned fielding of the 2nd AD:

|                            | From   | To     |
|----------------------------|--------|--------|
| IOC                        | Jul 96 | Aug 96 |
| Fielding Total Force Start | Jul 96 | Aug 96 |

(Ch-4) Multi-Service Operational Test (Jan 98), the joint Army and Marine Corps test of functionality of the AFATDS '97 Release, was added.

9c. Schedule (Cont'd):

(Ch-5) Requirements for BCE and POMCUS were added by DCSOPS which affect the following milestones:

|                                |        |        |
|--------------------------------|--------|--------|
|                                | From   | To     |
| Fielding Complete Active Force | May 01 | Jul 01 |
| Fielding Complete Total Force  | Jan 07 | Apr 07 |

b. Previous Change Explanations --

Hardware related parameters such as MTBF, MTTR, MIPS, power and weight were deleted in the Oct 92 APB as they reflect performance characteristics of the ATCCS Common Hardware Software.

System specific software parameters were added in the Oct 92 APB to

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

AFATDS, December 31, 1995

10b. Performance Characteristics (Cont'd):

reflect the technical characteristics of the AFATDS functional software as identified in program requirements documentation.

c. Current Change Explanations --

(Ch-1) Per the Approved Program, all technical parameters formerly identified by version have been deleted and replaced by the objective system parameter.

(Ch-2) Emergency Purge has been changed from 2 to deleted because this parameter cannot be measured nor confirmed.

(Ch-3) Demonstrated value for Operating Temperature changed from TBD to 0-120 based on results obtained in the Initial Operational Test and Evaluation, Aug 95.

b. Previous Change Explanations --

RD&E

Economic: Revised escalation indices; Economic Adjustment for Negative Program Change.

Schedule: Revised schedule due to funding profile changes.

Estimating: Adjustment for Current and Prior Inflation; Additional funding to continue program in FY98 and FY99; Additional funds for software development including Version 1 contract cost growth and revised requirements for subsequent versions; Additional funds for OPTEC IOTE; Additional funds for FSATS, Decreased engineering and management support requirements.

\*\*\* UNCLASSIFIED \*\*\*

AFATDS, December 31, 1995

13b. Cost Variance Analysis (Cont'd):

Procurement

Economic: Revised escalation indices; Economic Adjustment for Negative Program Change.

Quantity: Quantity increase from 3184 to 5414 due to additional deployment requirement; change in force structure; additional training base requirements.

Schedule: Revised schedule due to funding revisions.

Estimating: Adjustment for Current and Prior Inflation; contractual cost changes due to revised pricing methodology, changes in CHS nonrecurring cost guidance; increased project management and software cost associated with IPSAS and AFATDS revised schedule.

Support: Changes due to reprogrammed funding for Total Package Fielding costs; Increased fielding and training requirements; Increased cost for spares; Decrease in support cost per revised CHS pricing guidance; Adjustment for Current and Prior Inflation.

15. Contract Information (Then-Year Dollars in Millions):

a. EDT&E --

AFATDS V1:

Magnavox Government, Fort Wayne, IN  
DAAB07-90-C-E708, CPAF/FP  
Award: April 27, 1990  
Definitized: April 27, 1990

| Initial Contract Price |                |            |
|------------------------|----------------|------------|
| <u>Target</u>          | <u>Ceiling</u> | <u>Qty</u> |
| \$60.5                 | \$0.0          | 1          |

| Current Contract Price |                |            | Estimated Price At Completion |                        |
|------------------------|----------------|------------|-------------------------------|------------------------|
| <u>Target</u>          | <u>Ceiling</u> | <u>Qty</u> | <u>Contractor</u>             | <u>Program Manager</u> |
| \$81.9                 | \$0.0          | 1          | \$112.0                       | \$112.0                |

|   | <u>Cost Variance</u> | <u>Schedule Variance</u> |
|---|----------------------|--------------------------|
| Previous Cumulative Variances           | \$-24.4              | \$-0.3                   |
| Cumulative Variances To Date (12/29/95) | \$-28.8              | \$-0.1                   |
| Net Change                              | \$-4.4               | \$0.2                    |

Explanation of Change:

The unfavorable cost variance is due to additional costs incurred to optimize the V1 software and perform regression testing. The favorable schedule variance reflects the contract completion. The Version 1 effort is essentially complete therefore this contract will no longer be reported in the SAR.

AFATDS V2:

Magnavox Ele. Sys. Co, Ft Wayne, IN  
DAAB07-90-C-E708, CPAF/FFP  
Award: October 28, 1992  
Definitized: N/A

| Initial Contract Price |                |            |
|------------------------|----------------|------------|
| <u>Target</u>          | <u>Ceiling</u> | <u>Qty</u> |
| \$47.4                 | \$0.0          | 1          |

| Current Contract Price |                |            | Estimated Price At Completion |                        |
|------------------------|----------------|------------|-------------------------------|------------------------|
| <u>Target</u>          | <u>Ceiling</u> | <u>Qty</u> | <u>Contractor</u>             | <u>Program Manager</u> |
| \$50.4                 | \$0.0          | 1          | \$51.2                        | \$51.2                 |

|   | <u>Cost Variance</u> | <u>Schedule Variance</u> |
|---|----------------------|--------------------------|
| Previous Cumulative Variances           | \$0.0                | \$0.0                    |
| Cumulative Variances To Date (12/29/95) | \$-9.5               | \$-9.7                   |
| Net Change                              | \$-9.5               | \$-9.7                   |

Explanation of Change:

The contract effort was rebaselined in Dec 95 with no cost change. As part of the rebaseline effort, schedule and performance were set equal to actuals, causing cumulative variances to be equal to 0. The unfavorable cost and schedule variances will be explained in the next SAR.

17. Production Rate Data:

|   |             |                    |
|---|-------------|--------------------|
| a. Deliveries to Date --                |             | <u>Plan/Actual</u> |
|   | RDT&E       | 63/63              |
|   | Procurement | 2303/2303          |
| b. Approved Design-to-Cost Objective -- | N/A.        |                    |

The AFATDS will utilize Common Hardware equipment. There is no Design-to-Cost Objective for the program.

18. Operating and Support Costs:

a. Assumptions and Ground Rules --

The O&S costs are to operate and maintain the AFATDS system, based on a peacetime operating tempo of 1800 hrs/yr. The costs are based on an operating life of 20 years, with a reprocurement of the CHS hardware after 10 years. The CHS will be contractor maintained above the unit level. Costs are from the AFATDS Army Cost Position, Nov 95. Military personnel costs are based on the AFATDS Manpower Estimate Report (MER), May 95. Costs are shown per division.

The AFATDS will replace the TACFIRE/LTACFIRE systems and associated Fire Support hardware. The costs shown were provided by the Field Artillery School (USAFAS), Ft Sill, and reflect TACFIRE support costs only.

b. Costs -- (FY 1996 Constant (Base-Year) Dollars in Millions)

| Cost Element       | Avg Annual Cost Per<br>DIVISION | Avg Annual Cost Per<br>TACFIRE SYSTEM |

AS AMENDED

\*\*\* UNCLASSIFIED \*\*\*

AV-8B REMANUFACTURE, December 31, 1995

6. (U) Mission and Description:

The AV-8B (Harrier II) is a second generation, Vertical/Short Take-off and Landing (V/STOL) light-attack jet aircraft utilized by the Marine Corps. The primary mission of the AV-8B is to provide responsive close air support for the ground forces. This single-piloted, advanced V/STOL aircraft can operate from short fields, forward sites, roads and surface ships providing minimum response time to target.

The AV-8B Remanufacture program converts older AV-8B aircraft to the most recent production configuration. The process requires disassembly of the aircraft; modification of selected subsystems and components; and reassembly of selected original, modified, and new production subsystem and parts. Production processes and tooling are used to fabricate new subsystems, parts and components as well as to assemble the aircraft.

AV-8B Remanufacture is an Acquisition Category IC program managed by the A/V Weapon Systems Program Manager, PMA-257. Because the remanufactured aircraft reflect the present production aircraft configuration, they satisfy existing Operational Requirements (OR) 025-05-85 of September 19, 1984 (Night Attack) and OR 224-05-89 of August 8, 1988 (Radar). Remanufacture provides the Marine Corps with increased quantities of aircraft capable of effective night fighting operations at a reduced cost by reusing major components of the day attack fleet aircraft.

7. (U) Program Highlights:

a. (U) Significant Historical Developments -- None.

b. (U) Significant Developments Since Last Report --  
The AV-8B Remanufacture program is expected to meet all mission requirements.

c. (U) Changes Since As Of Date -- None.

8. (U) Threshold Breaches:

There are no Numm McGurdy unit cost breaches. There is a 10.7% breach to the total procurement (BY\$) cost as currently approved in the Acquisition Program Baseline dated 30 June 1994. This breach is the result of cumulative increases in the areas of Engineering Change Proposals (ECPs) and Integrated Logistics Support (ILS). Total ECP costs increased because of unanticipated safety ECPs, increased capability requirements (including JDAM, Automatic Target Handoff System, ARC-210 ECCM Radio and mandated incorporation of Global Positioning System by FY 2000). Total ILS costs increased because of delays in most ILS procurements until the end of the program (FY 1999/FY 2000). ILS cost growths are due to escalation associated with the delayed procurements and small quantity near term ILS

b. (U) Previous Change Explanations --

Procurement

Economic: Revised escalation rates and procurement outlay factors.

Quantity: Total quantity procurement was reduced by one from seventy-three to seventy-two.

Schedule: The program was extended one year from 2000 to 2001.

Estimating: Rates are impacted by the new procurement quantity and schedule. Contractor overhead and labor rates have been revised due to new procurement outlay factors.

Support: Costs are impacted by extension of program one year from 2000 to 2001.

NAS, December 31, 1995

**5. Related Programs:**

Federal Aviation Administration (FAA) Capital Investment Plan (CIP) program.

**6. Mission and Description:**

The DoD National Airspace System (NAS) program will modernize the DoD radar approach control facilities in parallel with the Federal Aviation Administration (FAA). The DoD NAS program provides systems and facilities compatible/interoperable with the FAA modernization, prevents DoD flight delays and cancellations, continues DoD's access into Special Use Airspace, provides transparent services to military and civil aircraft, replaces aging DoD ATC systems, and increases flight safety. DoD will upgrade voice, data, and sensor systems as well as facility configurations and operations concepts to provide continued quantity and quality of ATC services to the aviation community. The NAS program also includes the Military Airspace Management System (MAMS) which will schedule and manage special use airspace. MAMS is an automated Special Use Airspace (SUA) scheduling and utilization reporting tool which will enable DoD to more efficiently manage SUA. DoD military ATC and fighting/flying readiness will be maintained.

**7. Program Highlights:**

**a. Significant Historical Developments --**

The significant events of 1993 included the demonstration of the Military Airspace Management System (MAMS) prototype software at Edwards AFB, CA, on the MAMS prototype; demonstration of a repackaged Federal Aviation Administration (FAA) Common Console into the DoD configuration; release of the MAMS Request for Proposal (RFP) and subsequent source selection; and formal approval of executive interagency agreements for test, procurement and support of FAA Automation Systems.

The significant events of 1994 included Chief of Staff of the Air Force (CSAF) approval of updated National Airspace System (NAS) and MAMS Operational Requirements Documents (ORDs); Air Force Acquisition Executive (AFAE) approval of Change 1 to the NAS Acquisition Program Baseline (APB); DAC approval of MAMS Milestone II review; award of the MAMS Engineering Management Development (EMD) contract to Computer Based Systems, Inc. (CBSI); OSD approval of the NAS Test and Evaluation Master Plan (TEMP); FAA release of the Enhanced Terminal Voice Switch (ETVS) RFP; program office evaluation of FAA's Standard Terminal Automation Replacement System (STARS) to meet DoD operational and schedule requirements; and FAA development of an ORD that would satisfy DoD's automation requirements.

In Aug 94, the DoD assumed from the FAA, the lead role for the Digital Airport Surveillance Radar (DASR) acquisition. The FAA will

\*\*\* UNCLASSIFIED \*\*\*

MAS, December 31, 1995

**7a. Program Highlights (Cont'd):**

be offered options on the DoD contract. Excellent progress continued in the development of a single integrated system to meet the needs of military and civil aviation.

The significant events of 1995 included the MAS paper AFSARC Milestone II review; the Military Airspace Management System (MAMS) contract termination with Computer Based Systems, Inc. (CBSI) because of continuous cost and schedule problems; the successful program office negotiations with SM-ALC to utilize their existing Advanced Technology Support Program (ATSP) contract for completion of the MAMS development effort; the Federal Aviation Administration (FAA) Enhanced Terminal Voice Switch (ETVS) contract award to Denro, Inc.; the FAA Standard Terminal Automation Replacement System (STARS) draft RFP release; and the Digital Airport Surveillance Radar (DASR) RFP release.

DoD will acquire, to the maximum extent practical, systems on contract or systems to be on contract with the FAA to reduce development costs and prevent duplication. If the DoD does not modernize the DoD Air Traffic Control (ATC) system, the resulting reduced interoperability between current DoD and FAA facilities will negatively impact DoD flight operations.

**b. Significant Developments Since Last Report --**

The Military Airspace Management System (MAMS) delivery order was awarded to Hughes Aircraft on 3 Nov 95 utilizing the existing SM-ALC Advanced Technology Support Program (ATSP) contract to complete the MAMS development effort.

The Digital Airport Surveillance Radar (DASR) source selection commenced on 18 Dec 95.

Progress continued between the Federal Aviation Administration (FAA) and DoD personnel regarding unresolved DoD technical requirements on the FAA's Enhanced Terminal Voice Switch (ETVS) contract with Denro, Inc.

The MAS program is expected to satisfy all mission requirements.

**c. Changes Since As Of Date --**

The Federal Aviation Administration (FAA) RFP for the Standard Terminal Automation Replacement System (STARS) was released on 1 Mar 96. The STARS RFP reflects an NDI approach to the automation replacement system which will meet all DoD needs.

b. Previous Change Explanations --

The Milestone II Review was adjusted to incorporate DoD's impact of the Federal Aviation Administration (FAA) initiation of an NDI program for a new terminal automation system to which the DoD NAS baseline is synchronized.

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

NAS, December 31, 1995

9b. Schedule (Cont'd):

Development Contract Award was approved for deletion by the AFAB in the 27 May 94 revised APB. There will be no development contracts awarded.

The MAMS EMD contract was awarded to Computer Based Systems, Inc. on 8 June 1994 versus the originally expected May 1994 award date. A greater number of proposals than anticipated resulted in a longer source selection.

The Milestone II date was adjusted to reflect the actual decision date.

The dates of the following events were adjusted to reflect the Current Estimate in accordance with the 20 July 95 MS II APB: NAS MS III; MAMS DT&E Start and Complete; IOT&E Start and Complete; and IOC.

The following milestones were not included in the MS II APB, have not been carried forward as part of the Development Estimate, were reflected in the September 1995 SAR for transitional purposes only, and will not be shown in the December 1995 SAR nor any future SARs: MAMS Development Contract Award, DT&E Start and Complete, IOT&E Start and Complete, Production Award/Exercise, First Delivery, POC, Development Contract Award (initial), Voice QOT&E Start and Complete, Radar QOT&E Start and Complete, and Production Award/Exercise (VCSS/DAAS).

The following events were added with the approval of the 20 July 95 MS II APB: Radar (DASR) Contract Award, DT&E Start and Complete, LRIP Contract, LRIP First Delivery, IOT&E Start and Complete, Full Rate Production Contract Award, Automation (DAAS) Production Award Exercise, Voice (VCSS) Program Review, MAMS Development Contract, Milestone III Review, and Full Rate Production Contract Award.

c. Current Change Explanations --

(Ch-1) The Radar (DASR) Contract Award date was changed from March 96 to May 96 to reflect the delay caused by the implementation of mandated RFP streamlining.

(Ch-2) The MAMS Development Contract date was changed from October 95 to November 95 to reflect the actual award date.

ICD - Interface Control Document

b. Previous Change Explanations --

Current estimate of stub items changed to reflect approval of the revised NAS and MAMS OGDs on 3 March 1994 and 11 March 1994 respectively. The new OGDs portrayed a requested reduction in key parameters and quantified remaining parameters as required.

Current estimate of Radar Subclutter Visibility was reduced from 55 dB to 43 dB to reflect the results of a DoD market survey. This survey evaluated the current capability of industry to meet this parameter at 43 dB. The program is not impacted since 43 dB falls

- 10b. Performance Characteristics (Cont'd):  
within the threshold range for this stub item.

The following items are not critical performance parameters, were therefore not included in the MS II APB, were shown in the September 95 SAR for transitional purposes only, are not reported in the December 95 SAR nor any future SARs: Automation Data/Voice Recording, Automation Radar Presentation, Automation Compatibility Data Processing, Radar Compatibility, Voice Switch Lighting Environments, Voice System Interface Capability, and Voice Recording.

c. Current Change Explanations -- None.

b. Previous Change Explanations --

RD&E

Economic: Revised escalation rates.

Estimating: Adjustments were made for current and prior year inflation, refinement of the estimate, as well as for Small Business Innovative Research (SBIR) reductions, a Congressional general reduction, FFRDC, and Non-FFRDC actions and fact-of-life changes.

Procurement

Estimating: Base year dollar reduction resulting from correction of inflation indices used in program cost estimate.

\*\*\* UNCLASSIFIED \*\*\*

NAS, December 31, 1995

13b. Cost Variance Analysis (Cont'd):

**MILCON**

Estimating: Revised estimate to appropriately reflect MILCON efforts within the 3300 line.

17. Production Rate Data:

a. Deliveries to Date -- 0/0.

b. Approved Design-to-Cost Objective -- N/A.

Design-to-Cost information is not appropriate for this effort because HAS is a non-developmental (NDI) program. Design-to-Cost was approved by the Milestone Decision Authority (MDA) as "Not Applicable" at both MS I and MS II.

18. Operating and Support Costs:

a. Assumptions and Ground Rules --

The Operating and Support (O&S) cost estimate is based on analysis performed in preparation for the July 1995 MS II decision. The estimate assumes a 20 year life from year FY00 to FY19.

b. Costs -- (FY 1990 Constant (Base-Year) Dollars in Millions)

| Cost Element           | Avg Annual Cost Per<br>HAS Site | N/A |

Longbow HELLFIRE, December 31, 1995

5. (U) Related Programs:

AH-64 Longbow Apache Helicopter; Laser HELLFIRE

6. (U) Mission and Description:

HELLFIRE is an air-to-ground missile system designed to defeat individual hardpoint targets and minimize exposure of the delivery vehicle to enemy fire. The missile configuration has the capability for modular guidance section replacements. A version of the missile utilizing laser guidance, laser HELLFIRE, is presently in production and is a separate program. Longbow HELLFIRE (a version utilizing a radio frequency guidance section) is in low-rate initial production. Longbow HELLFIRE and Laser HELLFIRE are complementary and neither missile replaces another missile system in the air-to-ground role.

Longbow HELLFIRE and Laser HELLFIRE will be employed on the AH-64D Longbow Apache helicopter. Longbow HELLFIRE will provide the capability to conduct battle both day and night in adverse weather and with battlefield obscurants present. Longbow also offers a fire and forget capability which complements the semi-active laser HELLFIRE missile. The Longbow HELLFIRE Missile contains a radio frequency guidance section which will provide a lock-on before launch (LOBL) or lock-on after launch (LOAL) capability, depending on target range and movement parameters. Longbow will not change the AH-64 mission or role, but will provide for increased mission effectiveness by enhancing lethality and survivability. It is envisioned that Longbow HELLFIRE will also be used on the Comanche.

7. (U) Program Highlights:

a. (U) Significant Historical Developments --

In 1981, the U.S. Army Aviation Applied Technology Directorate, Fort Eustis, Virginia, conducted competition and awarded parallel competitive technology demonstration contracts to Martin Marietta Corporation (MMC) and Westinghouse Electric Corporation (WEC) for a fire control radar to be integrated and tested on the AH-64 Apache. In late 1981, after a series of study efforts, a classified program was initiated for a millimeter wave radar seeker for the HELLFIRE Modular Missile System which, in conjunction with the fire control radar, yielded a total systems approach for Apache. In 1982, WEC and MMC were again awarded parallel competitive contracts for the first phase of this program named the Critical Technology Demonstration (CTD). During the three-plus years of the CTD program, both MMC and WEC demonstrated that the technology was in hand for further systems development. As a result of a Government In-Process Review in Aug 85, a contract was awarded in Nov 85 to MMC and WEC, as a joint venture (JV), for preliminary design of the tactical Longbow System. This was followed in Aug 86 by the award of a Proof of Principle demonstration contract to the JV. An Initial Design Phase contract was awarded to the JV in Sep 89. Proof of principal of the Longbow missile was accomplished 11 Apr 90. The

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

Longbow HELLFIRE, December 31, 1995

7a. (U) Program Highlights (Cont'd):

Defense Acquisition Board (DAB) granted approval for engineering and manufacturing development (EMD) of the Longbow Missile 5 Dec 90, and a letter contract for EMD of the Longbow missile was awarded 26 Dec 90. The letter contract was definitized 7 May 91. A Special Program Review (SPR) to assess the Longbow HELLFIRE Program and define funding strategies to support Longbow Apache, fire control radar and missile programs was held in Aug 92. To better align the Longbow HELLFIRE program with the Longbow Apache program, initiation of production was delayed by one year and the procurement program was stretched. The Conventional Systems Committee review for Longbow long lead items and initial production facilitization was held 5 Oct 94. Approval to proceed with long lead of the HELLFIRE missile was withheld until cost reduction efforts were evaluated and approved. The Longbow HELLFIRE Cost Reduction Plan was briefed to the Defense Acquisition Executive on 1 Dec 94. The plan was approved and funding was released for long lead procurement and execution of the cost reduction plan. The contract for long lead procurement was awarded 23 Dec 94 by definitization of option one under the engineering and manufacturing development contract.

b. (U) Significant Developments Since Last Report --

On 11 May 95, the final development flight test of the Longbow HELLFIRE Missile was conducted. This flight successfully met a cost effective combination of system qualification and live fire test objectives. This firing successfully concluded the development flight test program. Live fire tests were successfully completed 27 Jul 95. On 13 Oct 95 the Defense Acquisition Executive granted approval for Longbow HELLFIRE to enter low-rate initial production and delegated authority to the Army to make the full-rate production decision. On 14 Dec 95 a novation agreement was signed that changed the Longbow JV to the Longbow Limited Liability Company (LLC), which was established by Lockheed Martin Corporation and Westhouse Electric Corporation (Westinghouse underwent a name change effective 4 Mar 96, now known as Northrop Grumman Corporation), to produce Longbow HELLFIRE. The Longbow HELLFIRE LRIP 1 option was definitized within available CRA funding 14 Dec 95. The remaining portion of this option was exercised 31 Jan 96.

The Longbow HELLFIRE Missile System is expected to satisfy the mission requirements.

c. (U) Changes Since As Of Date -- None.

8. (U) Threshold Breaches:

There are no breaches to the approved Acquisition Program Baseline (APB) dated 27 Nov 95. There are no Nunn-McCurdy unit cost breaches.

b. (U) Previous Change Explanations --

Low-Rate Initial Production (LRIP) Contract Award was changed from Apr 95 to Mar 95, First Production Delivery was changed from Sep 96 to Jun 96, and Full-Rate Production Contract Award was changed from Dec 96 to Nov 96 as a result of definitization of the LRIP options. In order to better align the Longbow Hellfire Program with the Longbow Apache program, a SPR directed the following program changes: Component Qual Test, Start changed from May 93 to Aug 93; Component Qual Test, Complete changed from Sep 93 to Nov 93; System Qual Test, Start changed from Mar 94 to Jul 94; System Qual Test, Complete changed from Nov 94 to Dec 94; Milestone IIIA (DAB) changed from Mar 95 to Nov 95; Low-Rate Initial Production Contract Award changed from Mar 95 to Dec 95; First Production Delivery changed from Jun 96 to Mar 97; Full-Rate Production Contract Award changed from Nov 96 to Dec 97; First Unit Equipped (FUE) changed from Feb 97 to Oct 97 and IOC changed from Apr 97 to Jan 98. Completion of component qualification test was extended from Nov 93 to Dec 94 in order to qualify the producibility enhanced transceiver design. Also a management decision was made to reschedule qualification tests of the environmental cover and container to the Jul-Dec 94 timeframe. Due to nonavailability of hardware, completion of component qualification of the producibility enhanced design was changed from Dec 94 to Apr 95. This also delayed

\*\*\*~~SECRET~~\*\*\*

Longbow Hellfire, December 31, 1995

9b. (U) Schedule (Cont'd):

completion of system qualification from Dec 94 to Apr 95.

c. (U) Current Change Explanations --

(Ch-1) Component Qualification Complete and System Qualification Complete was changed from Apr 95 to May 95 to reflect date of actual accomplishment.

(Ch-2) Milestone IIIA(DAB) was replaced by Milestone III. The current estimate was changed from Nov 95 to Oct 95 to reflect date of actual accomplishment.

(Ch-3) Since the Longbow Hellfire Cost Reduction Plan is contingent upon a multiyear contract beginning in FY 99 the milestone for Authorization FY 99 Multiyear Contract was added.

(Ch-4) Milestone First Unit Equipped (FUE) was deleted from the APB since this applies to the Longbow Apache (AH-64D). The current estimate was changed from Jan 98 to Dec 97 to reflect the Longbow Apache date.

| Total               | 10896                          | 13311                    | 13260                      |

Note: Excludes 70 RDTE prototypes from the SAR Baseline and 70 from the Current Estimate that are not considered fully configured.

- (1) Unit of measure is one missile.
- (2) LRIP quantities were established at the Milestone II DAB in Dec 90. In order to align the missile deliveries with the aircraft fielding schedule, during a Special Program Review held in Aug 92, the LRIP quantities were increased to 83 missiles over the 10% limit. From the Dec 93 SAR to the Dec 94 SAR the LRIP I quantity changed from 364 to 352 and the LRIP II quantity changed from 1050 to 1056. From the Dec 94 SAR the LRIP II quantity has changed from 1056 to 1005.

b. (U) Previous Change Explanations --

RDT&E

Economic: Revised escalation indices.

Estimating: Reduction in hardware requirements for qualification. Under estimated complexity of transceiver. Adjustment for current and prior inflation. Revision of OGA and in-house costs. Adjusted FY 94 and FY 95 appropriated amounts to reflect reprogramming and actual funds received.

Procurement

Economic: Revised escalation indices. Adjustment for negative program change.

Quantity: Addition of 2415 missiles.

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

Longbow Hellfire, December 31, 1995

13b. (U) Cost Variance Analysis (Cont'd):

Schedule: Shift of FY 2005 and FY 2006 missiles to FY 1998.  
Compressed schedule from FY 2005 to FY 2003, and  
increased rate from 1500 to 2200 per year.

Engineering: Producibility redesign for transceiver, radome,  
gimbal assembly, exciter, inertial measurement  
system, and IF receiver.

Estimating: Change in estimating methodology, includes  
not-to-exceed price options for all-up-rounds.  
Estimating methodology changed to reflect peak  
production rate of 125/month. Changed methodology  
to reflect production rate increases to minimum  
sustaining in full rate production. Methodology  
changed to reflect peak production rate of  
183/month, and 5 year multi-year procurement  
beginning in FY 99.

Support: Increased data cost for program stretch. Cost for  
2415 deicing domes. Revised support requirements  
based on shift of procurement buy and reduced data  
cost.

b. (U) Approved Design-to-Cost Objective -- N/A.

18. (U) Operating and Support Costs:

a. (U) Assumptions and Ground Rules --

Operating and support costs for Longbow HELLFIRE are costed under the philosophy of a "certified round" concept. The sustainment phase costs are for FY 97 through FY 25. The following efforts are considered applicable:

- o Replenishment spares for support equipment.

- o Annual overhaul of Longbow HELLFIRE equipment - ten percent of missiles in storage will be checked annually. Of the items checked, those that fail will be shipped to the depot for overhaul and return. Costs are based on predicted failure rate and average

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

Longbow Hellfire, December 31, 1995

18a. (U) Operating and Support Costs (Cont'd):  
cost to repair.

- o Transportation costs associated with annual overhaul.
- o System Project Management
- o Surveillance Program.

There is no antecedent system.

b. (U) Costs -- (FY 1996 Constant (Base-Year) Dollars in Millions)

| Cost Element | Avg Annual Cost Per Missile | Avg Annual Cost Per Antecedent |
|--------------|-----------------------------|--------------------------------|
| Fielding     | 0.0                         | N/A                            |
| Sustainment  | 0.1                         | N/A                            |
| Total        | 0.1                         | N/A                            |

Operating and support costs are from the 30 Jun 95 Program Office Estimate. Estimated average annual cost per missile for sustainment is \$6,563. Sustainment costs are defined in Section 18a.

c. (U) Contractor Support Costs -- None.

LPD 17 Class, December 31, 1995

5. (U) Related Programs (Cont'd):

Helicopters, MV 22 Assault Aircraft, Cooperative Engagement Capability (CEC), Evolved Seasparrow Surface Missile System (ESSM), Vertical Launch System (VLS).

6. (U) Mission and Description:

The LPD 17 Class Amphibious Transport Dock Ship will be the functional replacement for the LPD 4, LSD 36, LKA 113, and LST 1179 Classes of Amphibious Ships in embarking, transporting and landing elements of a Marine landing force in an assault by helicopters, landing craft, amphibious vehicles, and by a combination of these methods to conduct the primary amphibious warfare mission. The LPD 17 Class is required to fill the projected lift shortfall created by the retirement of the above ships.

7. (U) Program Highlights:

a. (U) Significant Historical Developments --

The Joint Requirements Oversight Council (JROC) validated the LPD 17 Class Mission Need Statement (MNS) on 18 September 1990. The planned retirement of 41 ships of the LKA 113, LPD 4, LSD 36, and LST 1179 Classes of Amphibious ships will result in a significant shortfall in amphibious lift and flexibility. LPD 17 Class will be the functional replacement for these ships. Planned deliveries of the LSD 41, LST 41 (Cargo Variant), and LHD ships will not fully compensate for this projected shortfall. The LPD 17 Class ships are required to fill the projected shortfall and to balance amphibious assault lift elements. Milestone 0 DAB was held on 1 November 1990 and feasibility studies initiated in February 1991. The JROC issued a memorandum, JROCM-026-91 dated 28 June 1991, stating that JCS had reviewed the required military capabilities and determined that a requirement for amphibious assault lift existed. In addition, the Defense Planning Guidance, dated 22 May 1992, directed the Navy to maintain a crisis response forward presence in various areas of the world, with amphibious forces. Thirteen alternatives were examined during this phase. The Milestone 1 DAB was held on 11 January 1993 and on 19 January 1993, the Under Secretary of Defense for Acquisition, (USD(A)), signed the Acquisition Decision Memorandum (ADM) approving the Navy recommended ship alternative and authorizing the program to enter Phase I, Preliminary/Contract Design. The baseline ship includes the cooperative engagement capability and sufficient own-ship self-defense capability against sea-skimming anti-ship cruise missiles addressed by the FY94 and FY95 Appropriation Act reports. The award of the lead ship was revised from FY96 to FY98 in the FY 1996 President's Budget plan.

b. (U) Significant Developments Since Last Report --

The JROC validated the LPD 17 Key Performance Parameters in May 1995. The FY 1996 Defense Appropriation Act restored lead ship funding to

\*\*\* UNCLASSIFIED \*\*\*

LPD 17 Class, December 31, 1995

7b. (U) Program Highlights (Cont'd):

FY 1996. The Milestone II Cost and Operational Effectiveness Analysis was completed in December 1995. Integrated Product Teams were formed with Navy and Office of the Secretary of Defense representatives to prepare for a Milestone II Defense Acquisition Board review to support award of the contract for detail design, total ship systems integration, construction, testing, logistics and life cycle support planning of the lead ship in FY 1996.

The LPD 17 Class Program is a pre-Milestone II Program and the Selected Acquisition Report is limited to RDT&E in accordance with Title 10, USC, Section 2432.

The LPD 17 Class Program is expected to satisfy its mission requirements.

c. (U) Changes Since As Of Date -- None

8. (U) Threshold Breaches:

The APB for LPD 17 Class Program has not been approved. A revised APB will be submitted in support of the upcoming Milestone II review. Mann-McCurdy Unit Cost Reporting is not applicable for RDT&E only SARA.

9. (U) Schedule:

Program Review of Jan 98 (Current Estimate) is prior to Follow Ship Award.

b. (U) Previous Change Explanations --

The Program Status Review, previously estimated for Jun 94, was deferred pending JROC revalidation of the ship's mission.

The Current Estimate of the OT&E (OT-1) Start and Completion was revised to reflect CONOPTEVFOR scheduling of the Early Operational Assessment (EOA).

All other Current Estimate Milestone dates were revised to reflect the change in lead ship award from FY96 to FY98 in the FY 1996 President's Budget plan.

c. (U) Current Change Explanations --

(Ch-1):

All Current Estimate Milestone dates starting with Milestone II have been revised to reflect the change in lead ship award from FY98 back to FY96.

(Ch-2):

A second Early Operational Assessment (EOA) was conducted as a result of last year's change in lead ship award from FY96 to FY98.

CSSCS, December 31, 1995

#### 6. Mission and Description:

The Combat Service Support Control System (CSSCS) is one of the five Battlefield Functional Area (BFA) systems which comprise the Army Tactical Command and Control System (ATCCS). The CSSCS will support Fire Support, Air Defense, Maneuver Control, and Intelligence-Electronic Warfare BFAs in the Active Army, Army Reserve and National Guard components. The CSSCS will provide critical logistical, personnel, medical, and financial information to force and theater level commanders in a timely, integrated and accurate fashion. This automated processing of critical data from the Combat Service Support (CSS) Standard Army Management Information Systems (STAMIS) and from subordinate organizational headquarters will be analyzed and integrated into informational reports for evaluating current and projected sustainment capabilities. The CSSCS will correct the deficiencies of the current manual CSS Command and Control (C2) system that severely hampers the ability of the CSS Commanders to evaluate CSS information with respect to the maneuver commander's course of action.

The CSSCS also provides CSS Commanders and their staffs with automated C2 capabilities, including CSS planning, decision support, critical resource tracking, access to the ATCCS common battlefield picture, briefing support, preparation and dissemination of orders and information exchange with other ATCCS BFA systems.

The CSSCS will include ATCCS common hardware, ATCCS Common Software, CSSCS-unique software and any CSSCS-unique hardware identified during development. This hardware and software, housed in the Standard Integrated Command Post System (SICPS) family of shelters, will enable CSS commanders and staffs to receive, analyze, process, and disseminate essential and critical C2 information to more effectively manage resources to support the maneuver commander's scheme of operation.

#### 7. Program Highlights:

a. Significant Historical Developments --  
Program Executive Officer Command and Control Systems (PEO CCS) chartered the Combat Service Support Control System (CSSCS) Project Management Office on 22 February 1988 to support decisions on the employment of resources and to communicate these decisions to support elements. In FY89, the CSSCS program was designated a Major Defense Acquisition Program. CSSCS was approved for Engineering and Manufacturing Development by the Army Systems Acquisition Review Council (ASARC) in December 1990. On 1 February 1991, the Version 3 & 4 software development contract was awarded to TRW. During September-October 1992, the CSSCS EUT&E was successfully held and demonstrated that the system was easily learned, user friendly, and provided meaningful logistics data which assisted the commander in assessing the sustainability and supportability of combat operations. In June 1993, the Army decided at the ATCCS Operational Test Readiness Review (OTRR) to delay the CSSCS Initial Operational Test

CSSCS, December 31, 1995

7a. Program Highlights (Cont'd):

and Evaluation (IOT&E) until the fourth quarter FY94 and to conduct a Limited User Test (LUT) in the last quarter of FY93. An Enhanced Program Stability Panel met on 23 August 1993 to review the Acquisition Program Baseline (APB) schedule breach as well as the overall CSSCS acquisition strategy. The panel concluded that the postponement of the IOT&E and introduction of the LUT were justified as prudent management actions. The panel also requested a validation of the CSSCS life cycle costs, and following validation, a revised APB was submitted to HQDA and approved by Army Acquisition Executive (AAE) on 22 February 1994. The LUT was concluded with the successful completion of III Corps' Phantom Sabre in November 1993. Formal training to support the IOT&E began on 9 May 1994 with a total of 75 students completing the first three week operator/maintainer course on 27 May 94. Training continued until the start of the pilot phase on 18 July. The eight day pilot phase was conducted with CSSCS arrayed in a Division/Corps arrangement with 8 division nodes and 7 corps level nodes. This required using 26 CSSCS systems communicating between nodes via Local Area Network (LAN), Single Command Ground and Air Radio System (SINGARS), Mobile Subscriber Equipment (MSE) and wire. At the end of the pilot phase, TEXCOM began the control phase of the IOT&E which continued until the conclusion of the III Corps Run Runner Field Training Exercise (FTX) on 16 September 1994. With the completion of the IOT&E, TEXCOM began preparation of the test report in support of the Milestone III ASARC. Following the IOT&E, CSSCS participated in the second phase of the ATCCS Integrated Interoperability Demonstration Experiment (IIIDE) at Ft Lewis. This experiment successfully demonstrated the exchange of information with the other four ATCCS nodes using free text messages, United States Message Text Format (USMTF) messages, exchange of pictures using frame grabber and connecting remotely to MCS Version 12 prototype. In December 1993, the Army decided to consolidate PM CSSCS with PM Army WWMCS Information Systems (AWIS) and PM Standard Theater Army Command and Control System (STACCS). During August 1994, staff members from CSSCS met with AWIS and STACCS to prepare the Request for Proposals (RFP) for the new Army Global Command and Control System (AGCCS) which resulted in a contract award in December 1994. The Director of Requirements, Assistant Deputy Chief of Staff for Operations and Plans Force Development (ADCSOPS-FD), was briefed concerning the CSSCS Required Operational Concept (ROC) to Operational Requirements Document (ORD) conversion with the purpose to crosswalk the ROC requirements to the new ORD and to obtain ODCSOPS approval. The ADCSOPS-FD, approved the CSSCS ORD on 9 December 1994. The CSSCS Milestone III Preliminary Army Systems Acquisition Review Council (Pre-ASARC), chaired by the Military Deputy to the Assistant Secretary of the Army for Research, Development and Acquisition, was held on 24 February 1995. On 27 March 1995 the AAE approved the Acquisition Decision Memorandum (ADM)

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

CSSCS, December 31, 1995

7a. Program Highlights (Cont'd):

resulting from the Pre-ASARC. The ADM authorized the PM to enter into Low Rate Initial Production (LRIP), to procure CHS-2 hardware and begin the CSSCS transition to that platform. An IOT&E-II will be held in September-November 1996 to support a decision to enter full rate production and deployment. The ADM also directed that a Version 4 LUT be conducted in FY97 and an Version 5 FOT&E be conducted in FY99. Changes to the CSSCS schedule required by the ADM were incorporated into a revised APB, which was approved by the AAE on 23 June 1995. On 16 March CSSCS completed its efforts of Confederation Models testing at the Warrior Preparation Site, Kaiserslautern, Germany. On 20 April 1995, an information briefing was given to the Deputy Assistant Secretary of Defense (C3I) recapping the proceedings of the CSSCS Milestone III Pre-ASARC and the resulting ADM. The meeting was well received and satisfied the requirement to brief the OSD C3I Committee. During May 1995, the focus of the PM office was on planning, preparation and execution of PRAIRIE WARRIOR 95 at Fort Leavenworth, KS. Work included coordinating with simulations and models to ensure rapid and correct data input to and from CSSCS. A prime objective was to coordinate the development of an on-line interface with the Combat Service Support Training Simulation System (CSSTSS) for all future PRAIRIE WARRIOR and Army Warfighter Experiment-related activities. On 12 May 1995 the CSSCS team completed the initial setup of garrison operations at 2d Armored Division Support Command (DISCOM). These systems communicated daily over modems, providing the DISCOM Commander and staff with operational status of 2d Armored Division critical Class VII and Class IX items. This network was expanded using a combination of additional modems and the Fort Hood LAN. During the latter half of May 1995, the PM office supported the Team Fort Monmouth demonstration of sensor-to-target electronic capabilities for Force XXI at the annual AUSA Spring Symposium at Santa Clara, CA.

b. Significant Developments Since Last Report --  
None.

The CSSCS system is expected to satisfy mission requirements.

c. Changes Since As Of Date --  
On 21 February 1996 the CSSCS Horseblanket Review found that the only outstanding issue continues to be the funding shortfall for Operational Test and Evaluation Command/Test and Experimentation Command (OPTEC/TEXCOM) participation in the CSSCS September-November 1996 Initial Operational Test and Evaluation-II (IOT&E-II) and the September-November 1997 Limited User Test (LUT). The plan to fund these events continues.

(ROC) Required Operational Concept  
 (SDR) System Design Review  
 (SRS) Software Requirements Specification  
 (PDR) Preliminary Design Review  
 (CDR) Critical Design Review  
 (IOT&E) Initial Operational Test and Evaluation  
 (EUT&E) Early User Test and Experimentation  
 (FOT&E) Follow-on Operational Test and Evaluation  
 (LUT) Limited User Test  
 (PEO-IPR) Program Executive Officer In-Progress Review

b. Previous Change Explanations --

The CSSCS IOT&E was rescheduled to the July-September 1994 time period with a Limited User Test (LUT) held in the September-November 1993 time period based on the Army's decision to delay IOT&E. The major drivers behind the decision to delay IOT&E were: the adjustments to the ATCCS acquisition strategy and the resultant impact on ATCCS Horizontal Interoperability; PM CSSCS, CASCOM and OPTEC-TEXCOM test documentation and planning delays; III Corps' lack of identification of units to participate in testing; delays in completing the CSSCS Version 3 software; and the approximately three week delay in the start of formal CSSCS Technical Testing. The

CSSCS, December 31, 1995

9b. Schedule (Cont'd):

delay in the IOT&E and other milestones dependant on it resulted in a schedule breach, and a requirement to restructure the CSSCS Acquisition Program Baseline (APB) and to conduct an Enhanced Program Stability Panel Meeting. The panel, which met in August 1993, reviewed the baseline breach as well as the overall CSSCS acquisition strategy, and concluded that postponing the IOT&E and introducing an LUT were justified as prudent management actions. The panel also approved the deletion of the Complete Fielding milestone because of its vulnerability to be continuously breached due to annual budget perturbations. This milestone was deleted in the revised APB submitted to HQDA in December 1993. Changes to the schedule in 1993 were due to the revised APB submitted in response to the schedule breach. That APB was approved on 22 February 1994. Changes to the February 1994 APB were caused by the planned consolidation of FM CSSCS with FM AWIS and FM STACCS in July 1995, and the actual scheduling of the ASARC III. Begin Version 4 milestone was moved to match the new consolidated contract award date of December 1994. All other milestones changed based on the ASARC III scheduled date of 3 April 1995. The addition of an FOT&E Version 3 milestone was to ensure corrections resulting from the IOT&E were implemented before full fielding. Other changes to the PM CSSCS schedule were caused by the decisions at the Pre-ASARC III resulting in the Acquisition Decision Memorandum (ADM) dated 27 March 1995. The ADM approved the planned fielding of the CSSCS with Version 3 software and Common Hardware Software-1 (CHS-1) hardware to III Corps; to enter into a Low Rate Initial Production (LRIP) to procure CHS-2 hardware and begin the CSSCS transition to that platform. An IOT&E-II was directed to be held in mid-to-late 1996 to support a decision to enter into full rate production and deployment. FOT&E Version 4 was to be renamed LUT Version 4, and an FOT&E was directed for FY99. All changes were incorporated into a revised Acquisition Program Baseline (APB), which was approved by the AAE June 23, 1995.

c. Current Change Explanations --

(Ch-1) The CSSCS schedule is essentially unchanged from the June 23, 1995 Acquisition Program Baseline. A total of three minor changes, all within six months of the approved program, have occurred based on administrative/scheduling issues:

|               | FROM   | TO     |
|---------------|--------|--------|
| SRS Version 4 | Aug 95 | Dec 95 |
| PDR Version 4 | Dec 95 | Aug 96 |
| Version 4 CDR | Dec 95 | May 96 |

| Local Data File Update<br>Response Time<br>(sec/min) (sec) | 5/180     | 5/7 / 5/15  | 6.3 min                            | 6.3 min                     |

Demonstrated performance characteristics of TBD will be changed to reflect actual test results following CHS-2 hardware testing.

\* USMTF is the abbreviation for United States Message Text Format.

b. Previous Change Explanations --

Operational temperature estimate changed from 0-+120 degrees F to +40-+95 degrees to correct estimate error in previous SAR. The Mean Time Between Operational Mission Failure for the ATCCS CHS & CSSCS Software (HW&SW) changed from 210 hours to 140 hours due to the revision of the Reliability and Maintainability (RAM) Rationale, and was independently verified by the Combined Arms Support Command (CASCOM) and the Army Materiel Systems Analysis Activity (AMSAA). Estimated figures were revised to reflect results of the IOT&E as follows: User Responsiveness (Disp 24 lines (sec)) from 1.0 to 0.1; Scroll (lines/sec) from 20 to 21.6; Msg Trans and Receipt (24 hr Recpt & Process (mil char)) from 6.9 to 8.4; STAMIS msgs from 4400 to 5350; Capable of Update every x hours from 3 to 2.4; Process All Info Rec (within x hours) from 3 to .9; On-Line Query Resp Time (sec/min) from 5-180 sec to 1.6 min; and Local Data File Update Response Time (sec/min) from 5-180 sec to 6.3 min.

c. Current Change Explanations -- None.

b. Previous Change Explanations --

RDT&E

Economic: Revised escalation indices.

Estimating: Revision due to FY Reprogrammed funds not included in initial SAR. Decision to procure LCUs with RDT&E vs OPA funds for IOT&E.

Procurement

Economic: Revised escalation indices. Adjustment for Negative Program Change.

Quantity: Increased units from 1102 to 1115.

Schedule: Variance associated with Quantity Increase from 1102 to 1115. Change in procurement schedule FY95-FY06.

\*\*\* UNCLASSIFIED \*\*\*

CSSCS, December 31, 1995

13b. Cost Variance Analysis (Cont'd):

Estimating: Decreased estimate due to Funding Profile Changes.

Support: Decreased Initial Spares requirement.

b. Approved Design-to-Cost Objective -- N/A.

The CSSCS will utilize Common Hardware equipment. There is no Design-to-Cost Objective for the program.

18. Operating and Support Costs:

a. Assumptions and Ground Rules --

The concept of operation is for CSSCS to be fielded in both active and reserve units. The total manhours of operation per year for active duty units per device is 4745 hours during wartime, 2372.5 hours during peacetime, and 234 hours for reserve units. There are no new personnel costs involved, as CSSCS will be operated by personnel currently assigned to those organizations receiving these devices. The present maintenance concept for the CHS hardware is contractor logistics support for the operational life of the equipment, not to exceed ten years. Contractor will establish Regional Support Centers (RSC), which will provide all repairs above the unit level. Unit level maintenance consists of preventive maintenance, replacement of Line Replaceable Units (LRU), and replacement of expendable items (cables, batteries, fuses, and filters). Internal repair of LRUs requiring removal of covers will not be performed by U.S. Army personnel. Units will exchange unserviceable LRUs for serviceable LRUs through assigned Intermediate Direct Support (IDS) facilities. The IDS will perform fault verification and ship unserviceable LRUs to the nearest RSC for repair. There is no antecedent equipment for the CSSCS. It will replace current manual and non-standard automated processes. PM CSSCS will not be provided funding for O&S costs. All O&S costs will be funded at the unit level after delivery.

The Average Annual Cost is for the entire CSSCS system and is based on sustainment from FY 95-26. Source: Army Cost Position, March 1995.

APPN 2032 ICN CA6110 (Army)

5. (U) Related Programs:

Multiple Launch Rocket System (MLRS) and Army Tactical Missile System (Army TACMS)

6. (U) Mission and Description:

The Army TACMS Block II and BAT systems support the Army's deep fires doctrine, which calls for the destruction and/or disruption of threat forces at ranges in excess of 100 kilometers. The BAT is a top attack submunition with acoustic and infrared (IR) seekers working in tandem for autonomous attack of moving armor. The BAT Preplanned Product Improvement (P3I) adds cold, sitting armor, heavy multiple launch rocket systems, and surface to surface missile transporter erector launchers to the target set through seeker and warhead improvements. BAT and BAT P3I submunitions are carried deep into enemy territory by variants of the Army TACMS missile, then dispensed to attack and destroy targets. Being a certified round, both the missile and submunition have a low sustainment cost. The Army TACMS Block II missile, a version of the currently fielded and combat-proven Army TACMS Block I missile, will carry 13 BAT/BAT P3I submunitions. The Army TACMS Block IIA missile, an extended range version of the Block II missile, will carry 6 BAT P3I submunitions to ranges in excess of 200 kilometers. The Army TACMS Block II and BAT Programs do not replace another system.

7. (U) Program Highlights:

a. (U) Significant Historical Developments --

The BAT program was established as a special access program and approved for execution 5 Jun 84. Phase I of the Proof of Principle (POP) program began Aug 84 with Northrop Corporation as the prime contractor, and Phase II began in Jun 85 with completion in Apr 89. An extended POP was approved May 89 to address specific technical issues which were later resolved. A Milestone II review was held in May 91, and an Engineering and Manufacturing Development (EMD) contract was awarded in Jun 91 to Northrop Corporation. The program was disestablished as a special access program and established as the BAT Project in Jun 91. Subsystem Critical Design Reviews (CDRs) began in Jan 92, with successful completion of the System Integration CDR in May 92. A 2 Nov 92 Defense Acquisition Board (DAB) directed restructure of BAT to a 54-month program to align with the Tri-Service Standoff Attack Missile (TSSAM) Program. In Dec 92, a successful sled test demonstration of BAT submunitions in a supersonic environment was completed. In Feb 93, the Joint Strategic

ATACMS/BAT, December 31, 1995

7a. (U) Program Highlights (Cont'd):

Systems Committee/Conventional Systems Committee (SSC/CSC) directed continuation of the BAT program with reduced quantities, and that the BAT P3I program continue with Army TACMS Block IIA as the carrier. In Nov 93, the BAT P3I Demonstration/Validation (Phase I) contract was awarded to Northrop Corporation. Army TACMS was designated in Nov 93 as the carrier for the BAT submunition; this resulted in a second restructure of the BAT EMD contract. In Dec 93, the Assistant Secretary of Army, Research, Development and Acquisition, directed the Army to terminate participation in the TSSAM program. The Army TACMS and BAT Project Offices were deactivated and reactivated as the Army TACMS-BAT Project Office in Apr 94. The CSC recommended in Jun 94 that the Army TACMS Block II, Block IIA, BAT, and BAT P3I programs be combined and documented under a single Acquisition Category (ACAT) ID major defense acquisition program (MDAP). The BAT EMD contract was modified in Nov 94 to change the delivery vehicle to the Army TACMS Block II. In Dec 94, BAT had two successful end-to-end design verification tests against a remotely controlled array of tanks and armored personnel carriers. The Army TACMS Block II Phase III Design Study was awarded to Loral Vought in Apr 94. In Dec 94, the BAT P3I Phase II Dem/Val contract option was exercised. The Army TACMS Block II Continued Development Program was approved by the AAE in May 95.

b. (U) Significant Developments Since Last Report --

The Army TACMS Block II Continued Development contract was awarded on 12 Jul 95 to Loral Vought Systems (LVS). The cost-plus-incentive-fee contract includes the basic, plus options for Engineering Development Tests (EDT), and Initial Operational Test and Evaluation (IOTE).

The BAT EMD contract which restructures the BAT program with Army TACMS Block II as the carrier was definitized on 8 Sep 95 with Northrop-Grumman.

On 9 Nov 95, BAT Design Verification Test (DVT) No. 6 was conducted at White Sands Missile Range (WSMR), NM. The target was missed by approximately 150 meters. Several anomalies were noted by the post flight analysis team. Corrective actions and verifications will be completed to support a retest (DVT No. 6b) scheduled for 2Q96.

BAT P3I completed System Design Review in Nov 95 and P3I seeker critical item development specifications were developed.

The Army TACMS/BAT program is expected to satisfy mission requirements.

c. (U) Changes Since As Of Date --

On 9 Mar 96, BAT DVT No. 6b was conducted at WSMR. The BAT flew a stable flight and impacted a moving T-72 in a highly vulnerable area of the rear engine deck. The test successfully demonstrated the corrective actions taken as a result of DVT No. 6.

The Engineering Development Test (EDT) option, ATACMS Block II

7c. (U) Program Highlights (Cont'd):

Continued Development Contract DAAH01-95-C-001, was exercised on 8 Feb 96 for \$5.6M. Acceleration of these flight tests and associated effort mitigates the schedule risk inherent in existing BAT Milestone IIIA exit criteria which requires at least one missile flight test with a successful dispense prior to approval of low rate BAT production.

8. (U) Threshold Breaches:

There are currently no breaches to the approved Acquisition Program Baseline (APB), 22 Sep 95. There are no Nunn-McCurdy unit cost breaches.

9. (U) Schedule:

BAT/BAT P3I

| Milestone III           | N/A                            | FEB 02                     | FEB 02                     |

b. (U) Previous Change Explanations --

Critical Design Review changed due to delay of subcontractors/vendors receiving finalized system requirements. Changes were due to restructure of BAT EMD to a 54-month program and the addition of P3I Demonstration/Validation and EMD. Milestones changed due to restructure of the BAT program to align with the new delivery vehicle, Army TACMS Block II. BAT P3I milestones were added. Completion of Design Verification Test (DVT) slipped due to a cost reduction initiative (Army Cost Position Excursion, 7 Apr 95) which slipped completion of DVT into FY96.

c. (U) Current Change Explanations --

(Ch-1) - Completion of Design Verification Test (DVT) slipped from Oct 95 to Apr 96 due to hardware problems uncovered during DVT flights and subsystem qualification.

(Ch-2) - Start of BAT Contractor Development Test slipped from Feb 96 to May 96 due to delays encountered during DVT.

(Ch-3) - Completion date of BAT Contractor Development Test slipped from Mar 97 to Apr 97 due to delays encountered during DVT.

(Ch-4) - Milestone for P3I DEM/VAL was renamed P3I Phase I Study Award in Acquisition Program Baseline, 22 Sep 95.

9c. (U) Schedule (Cont'd):  
Army TACMS Blk II/Blk IIA

c. (U) Current Change Explanations --

(Ch-1) - Continued Development Contract Award changed from Jun 95 to Jul 95 to reflect actual award date.

(Ch-2) - Milestones changed due to award of the Engineering Development Test Option in the contract which accelerates the previously agreed test schedule as follows:

| MILESTONE                   | FROM   | TO     |
|-----------------------------|--------|--------|
| ATACMS Block II             |        |        |
| Pre-Production (PPT)        |        |        |
| Start (EDT/PPT Series)      | Nov 97 | Aug 97 |
| Complete (EDT/PPT Series)   | Mar 98 | Jan 98 |
| Production Qual Tests (PQT) |        |        |
| Start                       | Jun 98 | Apr 98 |
| Complete                    | Jan 99 | Nov 98 |
| Combined DT/OT Test         |        |        |
| Start                       | Apr 99 | Jan 99 |
| Complete                    | Jun 99 | Apr 99 |

(b)(1)

b. (U) Previous Change Explanations --

Kills per launcher load in Army TACMS have been changed to correct the current estimate from the Dec 91 SAR to match the development estimate. Range target data was changed to correct the target nomenclature. Additional penetration was changed because of data obtained from EMD test articles. TSSAM is no longer required for the BAT program; the Army TACMS Block II was designated as the delivery vehicle. Army TACMS kills per launcher load was changed because of recent demonstrations on EMD test articles. Lethality performance characteristics were renamed, added, or changed to remove ambiguity about interpreting data. Performance characteristic "Kills/Launcher Load, Large Cruise" is no longer applicable to the BAT program as Army TACMS Block II is the delivery vehicle.

BAT/BAT P3I unit of measure is a submunition.

The BAT Milestone II decision (Acquisition Decision Memo, 15 May 91) provided for an LRIP quantity of 3650 submunitions which exceeds the 10% guideline established in 10 U.S.C. 2400 (FASTA). The current LRIP quantity is 2756 which also exceeds the 10% guideline. The 2756 units are to be procured in three LRIPs whereas the originally planned 3650 units were to be procured in two LRIPs. The three LRIPs are required to: 1) provide operational test assets, 2) provide a reasonable ramp to production rate, 3) support Army TACMS Block II production requirements, and 4) maintain the BAT vendor base through continuous manufacturing. The first full rate production contract cannot be awarded until FY01 because Milestone III, which is constrained to the completion of Army TACMS Block II system operational testing and live fire testing, will not occur until Sep 00.

c. (U) Foreign Military Sales/International Cooperative Programs -- None.

d. (U) Nuclear Costs -- None.

ATACMS Block II/IIA unit of measure is a missile.

The total of Block II's LRIP I and LRIP II quantities (150 missiles) marginally exceeds the generic guidance contained in 10 U.S.C. 2400 (FASTA). The total LRIP quantities were logically selected to preserve the BAT production base and provide a logical ramp of both BAT and Block II production. Since the BAT and Block II programs are highly integrated, a 10% quantity change would cost the combined program over \$32M.

c. (U) Foreign Military Sales/International Cooperative Programs -- None.

d. (U) Nuclear Costs -- None.

b. (U) Previous Change Explanations --

RDT&E

Economic: Revised escalation indices. Adjustment for negative program change.

Schedule: Rephased development effort for FY 92-96.

Engineering: Increased scope due to restructure and addition of BAT P3I EMD. Refinement of BAT P3I to reallocate integration cost for the carrier.

Estimating: Adjustment for current and prior inflation. Additional development costs for hardware integration for the Army TACMS versus the TSSAM BAT carrier. Revised estimate for hardware integration. Additional costs for feasibility

ATACMS/BAT, December 31, 1995

13b. (U) Cost Variance Analysis (Cont'd):

BAT/BAT P3I

studies and hardware tests. Addition of 1 year to incorporate Army TACMS Block II. Decrease for budget adjustments in FY 96-02 to align with Army cost reduction excursion.

Procurement

**Economic:** Revised escalation indices. Adjustment for negative program change.

**Quantity:** Decrease of 12839 units from 30993 to 18154. Recategorizing quantity and estimating in Dec 92 SAR. Increase of 2066 units from 18154 to 20220. Increase quantity from 20220 to 20226. Decrease quantity from 20226 to 19902.

**Schedule:** Revised schedule of submunition procurement from FY 95-96 to FY 03-06. A 1 year delay in start of production from FY 94 to FY 95. Change in the procurement buy schedule. Change in annual buy quantities from FY 00-06.

**Engineering:** Refined production cost estimate to incorporate BAT P3I into the BAT terminal seeker. Engineering allocation resulting from decrease of 324 units.

**Estimating:** Adjustment for current and prior year inflation. Allocation associated with quantity reduction. Changed learning curve assumption based on quantity reduction. Allocation associated with quantity increase. Refined cost based on efficiency in rate of procurement of a larger annual buy quantity for FY 98-01. Reduction of estimate for closeout costs from FY 06 to FY 05. Increase costs for learning curve inefficiencies and fixed costs. Estimating allocation resulting from decrease of 324 units. Estimate revised which incorporated Phase I Cost Reduction Plan for Program Management and Production Support.

**Support:** Change in projected engineering data costs. Decrease in support based on reduction of 12839 units. Increase in support based on quantity increase of 2066 units. Decrease for data and first destination transportation requirements. Decrease in support based on reduction of 324 units.

ATACMS/BAT, December 31, 1995

15. (U) Contract Information (Cont'd):

Explanation of Change:

The unfavorable schedule variance is due to delays in the qualification testing, the infrared (IR) seeker component problems, and a leak on the deceleration stabilization subsystem (DSS) finite. The unfavorable cost variance is due to the DSS finite issue, the IR seeker component problems, and an adjustment to G&A rates. The schedule variance is not expected to impact contract completion. The current contract target price increased as a result of the contract restructure being definitized.

Explanation of Change:

The unfavorable schedule variance is driven by the two subcontractors, Alliant Techsystems and Westinghouse. The variance at Alliant reflects the delay in the start of building the spare Millimeter Wave (MMW) Captive Flight Test (CFT) unit. This variance should improve with the delivery of material and test data supporting this build. The variance at Westinghouse is due to a lack of manpower and a delay in receipt of supplier invoices. This variance is expected to recover since additional manpower have been added. The impact of delayed invoices will be alleviated once vendor invoices are received and earned value is taken. The favorable cost variance is primarily due to efficiencies in the prime contractor's program management and lower forward pricing rates.

Phase I awarded in Oct 93 and NTE option for Phase II was awarded Dec 94. Phase II was definitized on 21 Dec 94.

| Cumulative Variances To Date (11/30/95) | \$0.2                | \$-0.5                   |
| Net Change                              | \$0.2                | \$-0.5                   |

Explanation of Change:

The unfavorable schedule variance is due to lack of adequate staffing for electronic design and systems engineering, the result of a delay in the receipt of a preliminary design for the skin severance system from the subcontractor, and a delay in the pyroshock testing due to the failure of the submunition contractor to deliver a test submunition. The favorable cost variance comes from lower costs for computers and travel than anticipated as a result of the slow buildup of engineering personnel for electronic design and systems engineering.

This is the first time this contract has appeared in the SAR.

17. (U) Production Rate Data:

a. (U) Deliveries to Date -- 0/0.

b. (U) Approved Design-to-Cost Objective -- N/A.

There was no Design-to-Cost objective established at the Milestone II review. The BAT Acquisition Decision Memorandum, dated 15 May 91, established a Design to Unit Production Cost (DTUPC) of less than or equal to \$55K (FY 91 \$, based upon production quantity of 30993) as exit criteria for Low Rate Initial Production.

a. (U) Deliveries to Date -- 0/0.

b. (U) Approved Design-to-Cost Objective -- N/A.

Design to Cost (DTC) Requirements waived, Memo, SARD-SM, 2 Nov 94,  
Subject: Request for Waiver of DTC Requirements - Army Tactical  
Missile System (ATACMS), Block II.

18. (U) Operating and Support Costs:

BAT/BAT P3I

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

ATACMS/BAT, December 31, 1995

18a. (U) Operating and Support Costs (Cont'd):  
BAT/BAT P3I

a. (U) Assumptions and Ground Rules --

The BAT Submunition will be furnished to the delivery vehicle contractor as GFE. The submunition is considered a certified round; therefore, O&S cost will be minimal. It will consist of stockpile reliability test for recertification, minimal depot maintenance, military personnel for Explosive Ordnance Disposal (EOD) and system project management. Based on the Level of Repair Analysis (LORA) and the associated Economic Analysis, contractor logistic support (CLS) is planned for the BAT. O&S costs will further solidify with the accelerated aging tests and stockpile reliability flight tests in FY96. There is no antecedent system.

b. (U) Costs -- (FY 1991 Constant (Base-Year) Dollars in Millions)

| Cost Element             | Avg Annual Cost Per<br>BAT System | Avg Annual Cost Per<br>Antecedent |
|--------------------------|-----------------------------------|-----------------------------------|
| DEP MAINTENANCE (28 YRS) | 1.4                               | N/A                               |
| MILPERS (15 YRS)         | 0.6                               | N/A                               |
| STKPILE REL TST (20 YRS) | 0.9                               | N/A                               |
| SOFTWARE (20 YRS)        | 0.7                               | N/A                               |
| Total                    | 3.6                               | N/A                               |

O&S Cost as of 31 Dec 95.

Contractor support costs are included in depot maintenance costs.

Average Annual Cost Per BAT System reflects average annual cost for total BAT quantity (19902).

c. (U) Contractor Support Costs -- None.

Army TACMS Blk II/Blk IIA

a. (U) Assumptions and Ground Rules --

Army TACMS Block II will be fired from the modified Multiple Launch Rocket System (MLRS) M270 launcher within the MLRS organizational

6. Mission and Description:

The F/A-18 E/F will be the second major model upgrade since F/A-18 aircraft program inception. The F/A-18 E (single seat) and the F/A-18 F (two seat) will be a high performance twin engine, mid-wing, multi-mission tactical aircraft designed to replace F/A-18 C (single seat), F/A-18 D (two seat), A-6, and F-14 aircraft as they reach the

6. Mission and Description (Cont'd):

end of service life and retire. The F/A-18 E/F will be designed primarily to meet current Navy and Marine Corps fighter escort, interdiction, fleet air defense and close air support mission requirements. Enhancements will include the increased range, improved survivability, and improved carrier suitability required for the F/A-18 to continue its key strike fighter role against the advanced threat of the late 1990's and beyond.

7. Program Highlights:

a. Significant Historical Developments --

In July 1987, the Secretary Of Defense issued a memorandum to the Secretaries of the Navy and the Air Force directing them to begin studying advanced versions of the F/A-18 and F-16 aircraft. In response, the Assistant Chief of Naval Operations for Air Warfare initiated an upgrade study to evaluate various F/A-18 alternatives for the year 2000 and beyond. The trade studies for the Hornet 2000 evaluated seven configuration options for operational performance, costs and technical feasibility. The results of these studies, refined by risk reduction work during FY-91, have been incorporated into the recommended configuration for the F/A-18 E/F.

The F/A-18 E/F program was reviewed by the Defense Acquisition Board (DAB) for Milestone IV/II approval in May 1992. The DAB approved the program to enter Engineering and Manufacturing Development (E&MD) in the Acquisition Decision Memorandum (ADM) on 12 May 1992. The E&MD contract was awarded July 1992. The E&MD engine and airframe contracts were definitized on 07 December 1992. The Test and Evaluation Master Plan for the F/A-18 E/F was approved 5 May 1992. Update has been approved by the Director of Developmental Test & Evaluation and is awaiting signature by the Director of Operational Test & Evaluation. Full approval is anticipated in March 1996.

The F/A-18 E/F E&MD program successfully completed an Engine Preliminary Design Review in October 1992 and an Airframe Initial Design Review in September of 1992. An Integrated Management Information Control System (IMICS) has been implemented which allows the program office to monitor the contractors' schedule and cost process, and risk management. Also implemented was the cost/schedule control system which also monitors the contractors' cost and schedule progress and shows any changes or variances.

The F414 engine incorporates the basic design of the F412 core, which was partially developed under the A-12 Program. The testing under the A-12 program reduces risk considerably for F414 core development. Component rig testing of the afterburner (A/B) permitted early identification of design changes that resulted in improved A/B maintainability and durability while retaining overall A/B

**7a. Program Highlights (Cont'd):**

performance levels. Low pressure turbine and combustor rig tests in the last quarter of the year also produced better than expected performance. This had been considered a difficult challenge area. A/B altitude testing began in November 1992 with the first full engine to test on May 1993. Exploratory altitude testing began on November 1993.

Due to a \$190M FY93 Congressional Funding reduction, First Flight date for F/A-18E number 1 was adjusted to 31 December 1995.

Successfully completed First Engine to Test in May 93 and Airframe Preliminary Design Review in June 93.

The first four test engines had accumulated a total of 550 hours as of 31 December 1993, with no major problems.

The Department of Defense Bottom Up review completed in September 1993 recommended proceeding with the F/A-18 E/F development with an Initial Operational Capability (IOC) of September 2000.

Schedule and cost performance problems with Northrop occurred in August 93. The issue has been addressed and the program is executable within the DAB cost and schedule estimates.

The Airframe and Engine Critical Design reviews have been completed. The EMD phase is 77.1% complete for the McDonnell Douglas airframe and 82.1% complete for the General Electric engine.

**b. Significant Developments Since Last Report --**

The F/A-18 E/F entered a new phase of the EMD program with the flight of the first aircraft (F/A-18E number 1) in November 1995. The event occurred 2 days prior to the previous current estimate and 32 days ahead of the contractually required date. This was followed shortly by the flight of the second aircraft (F/A-18E number 2) in December 1995. Initial flights at St. Louis included missions dedicated to the Early Operational Assessment (EOA) which is required prior to release of production funds.

The Preliminary Flight Qualification (PFQ) was successfully completed on 29 September 1995 with over 5,400 hours of engine testing completed.

A Program Deviation Report was submitted in December 1995 to request a baseline change. The request was necessitated by a baseline breach in the date for OT-IIA. This breach was accompanied by delays to various developmental and operational test dates. These changes were a consequence of the FY93 \$190M Congressional mark. The commencement

7b. Program Highlights (Cont'd):

date for OPEVAL was not impacted.

The F/A-18 E/F is expected to meet all mission requirements.

c. Changes Since As Of Date --

The BOA was successfully completed on 26 February 1996 and signed out by the Commander, Operational Test and Evaluation Force (COMOTEFVFOR). The F/A-18 E/F was found to be potentially effective and suitable, with appropriate program management being applied.

In February 1996, the first and second aircraft (F/A-18E number 1 and number 2) were flown to the principle test site at the Naval Air Warfare Center-Aircraft Division in Patuxent River, MD. The aircrafts were accepted by the Integrated Test Team and the three year integrated test program was started.

The Program Deviation Report requesting a program baseline change was approved in February 1996.

8. Threshold Breaches:

There are no breaches to the Acquisition Program Baseline dated February 15, 1996. There are no Numm McCurdy unit cost breaches.

b. Previous Change Explanations --

The program schedule was updated to reflect the Amended FY 1993 President's Budget, dated January 1992. Milestone II/IV review rescheduled from March 92 to May 92 to meet DAB schedule. Preliminary Flight Qualification (Engine), Milestone III and Full Rate Production Contract Award updated to reflect program schedule as approved by DAB. Current milestone estimates were updated to reflect the impact of the Congressional funding reduction of \$190M in FY93.

The Critical Design Review (Airframe) was rescheduled from May 94 to June 94. The Material Support Date was updated from October 02 to April 03. The Navy Support Date and D-Level Maintenance Capability have been rescheduled from October 03 to December 03. These milestone dates have been updated to reflect current program schedule.

The Critical Design Review (Airframe) was rescheduled from June 94 to July 94. Successful completion of the CDR was accomplished in July 94. The Preliminary Flight Qualification (Engine) was updated from

\*\*\* UNCLASSIFIED \*\*\*

F/A-18 E/F, December 31, 1995

9b. Schedule (Cont'd):

March 95 to June 95. These milestone dates have been updated to reflect current program schedule.

c. Current Change Explanations --

(Ch-1): Production Readiness Review occurred one month prior to schedule.

(Ch-2): Preliminary Flight Qualification (Engine) and Limited Production Qualification rescheduled due to delays in engine testing.

(Ch-3): First Flight occurred 2 days prior to the previous current estimate and one month ahead of the contractually required date.

(Ch-4): The \$190 million Congressional mark in FY93 resulted in delays to the schedules of Development Testing & Evaluation, Operational Testing and Evaluation, and O-Level Maintenance Capability. These delays have been accommodated in the overall test schedule and have no effect on the commencement of OPEVAL.

b. Previous Change Explanations --

RDT&E

Economic: Revised escalation indices. Economic adjustment for negative program change.

Schedule: Revised flight test and aircraft delivery schedule. Revised schedule due to realignment of program funds.

Estimating: Pre-development effort previously funded under the F/A-18 C/D program. Adjustment for current & prior inflation. Revisions due to the FY95 Congressional reduction (-\$70M) and other miscellaneous marks including Small Business Innovative Research (SBIR) program.

\*\*\* UNCLASSIFIED \*\*\*

F/A-18 E/F, December 31, 1995

13b. Cost Variance Analysis (Cont'd):

Procurement

**Economic:** Revised escalation indices. Economic adjustment for negative program change.  
**Schedule:** Aircraft procurement accelerated, quantities procured in FY98-99. Change in annual procurement buy profile.  
**Engineering:** Addition of Positive Identification System and ATARS.  
**Estimating:** Refinement of a prior current estimate. Change in method used to de-escalate advanced procurement funds. Adjusted to reflect ancillary variance being moved from below Total Flyaway line (6/92 & 12/92 SAR) to above the Total Flyaway line (12/93 & 12/94 SAR).  
**Support:** Decrease in spares funding. Increase in support funding due to decreases in total flyaway costs. Adjusted to reflect ancillary variance being moved from below Total Flyaway line (6/92 & 12/92 SAR) to above the Total Flyaway line (12/93 & 12/94 SAR).

| Net Change                              | \$3.1 | \$-3.1  |

Explanation of Change:

The cost and schedule variances remained relatively stable during the last year. The prime contractor, MDA, has continued favorable cost variances in the Wing, Development Test, and Project Management, while NGMAD (subcontractor) variances in the Center and Aft Fuselage declined slightly. The contract is 77% complete and the program emphasis is shifting from manufacturing activity to aircraft flight testing. Assembly delays due to parts shortages were the primary cause for the schedule variances. However, significant improvements

| Net Change                              | \$-18.1              | \$0.3                    |

Explanation of Change:

Since the last SAR submission the unfavorable cost variance has increased by \$18.1M. Indirect rate impacts account for approximately a quarter of this amount. The majority of the remaining cost variance is associated with various hardware and testing issues. Overall, the schedule position has slightly improved since the last SAR submission.

16. Program Funding Summary (Current Estimate in Millions of Dollars):

a. Program Status --

- (1) Percent Program Completed: 24.0% (6 yrs/25 yrs)
- (2) Percent Program Cost Appropriated: 6.0% (\$4895.1 / \$80958.7)

Milstar Satellite Communications System

6. (U) Mission and Description:

a. (U) The Navy Extremely High Frequency (EHF) Satellite Communications (SATCOM) Program (NESP) AN/USC-38(V) is an anti-jam, low probability of intercept communications terminal designed to accommodate a wide variety of command and control communication applications (i.e., secure voice, teletype, data, and fleet broadcast systems). As the Navy's portion of Milstar, NESP terminals are an essential part of the number one command and control communications system within DOD as identified by the Chief of Naval Operations on 9 Feb 93. The terminal operates within the EHF uplink and Super High Frequency (SHF) downlink radio frequency (RF) spectrums. The terminals are interoperable with Army and Air Force terminals and will operate with Milstar satellites as well as EHF packages on board Ultra High Frequency (UHF) Follow-On (UFO) Satellites 4 - 10 and with the Fleet Satellite (FLTSAT) EHF Packages (FEP) installed on FLTSATs 7 and 8. A medium data rate (MDR) applique is being developed for incorporation into the NESP terminal to allow MDR communications with Milstar II satellites. The NESP terminals will provide vital survivable wartime command and control communications for the National Command Authority, Specified/Unified CINCs, and operational commanders. NESP has three configurations: Submarine (V)1, Ship (V)2, and Shore (V)3. This system does not replace another system.

7. (U) Program Highlights:

a. (U) Significant Historical Developments --

(U) The terminal was developed to support the requirements of the Mission Elements Needs Statement (MENS), ASN (RE&S) letter of 23 July 1981, and Navy Decision Coordinating Paper (NDCP) of 21 January 1982, updated 25 April 1989. NESP's operational performance will meet the threat defined in the Milstar System Threat Assessment Report (STAR) updated March 1992. After a full and open competition, three companies began system definition and concept demonstration in 1979. Two companies were selected for Full Scale Development (FSD) in 1982; one company was awarded a Firm Fixed Price contract in 1986 for FSD completion and initial production. Low Rate Initial Production (LRIP) beginning in FY 90 was approved at a Milestone ITIA decision in May 1989. Operational Evaluation (OPEVAL) Phase I and OPEVAL Phase II were successfully completed in September 1990 and August 1992, respectively. Navy EHF SATCOM terminals supported Desert Storm operations by providing dedicated

**7a. (U) Program Highlights (Cont'd):**

Pentagon to Riyadh secure, jam-resistant communication links for USCINCENT via an EHF package on board FLTSAT 8. Full Rate Production beginning in FY 93 was approved at a Milestone III decision in April 1993.

(U) The first Milstar satellite was launched on 7 February 1994. A production NESP terminal successfully communicated with an Air Force terminal over the on-orbit Milstar Satellite on 15 February 1994 as part of Milstar System Test (MST)-8000.

(U) NESP achieved Service Depot Support capability in February 1994. Overall Organic Support capability was also accomplished with the achievement of Organic Depot Support capability in February 1994 and the prior achievement of Organic Supply Support in March 1993. NESP Initial Operational Capability (IOC) was achieved in April 1994.

(U) NESP terminals were certified as participants in the Dedicated Asset Test (DAT) portion of the Milstar Initial Operational Test and Evaluation (IOT&E) in August 1994. This test was completed in September 1994 and all DAT performance requirements were successfully achieved by the NESP terminals. NESP terminals were also certified to initiate Follow-On Operational Test and Evaluation (FOT&E) in August 1994. In September 1994 this test was completed with all test objectives successfully achieved.

(U) Operational NESP ship and shore terminals and the Milstar satellite were used to support Operation Restore Democracy in September 1994.

**b. (U) Significant Developments Since Last Report —**

(U) The Ultra High Frequency (UHF) Follow-On (UFO) Satellites Flights 4, 5, and 6, each equipped with an EHF package, were launched in 1995. All were tested successfully with NESP terminals. With the addition of these satellites, the DOD has achieved worldwide EHF communications coverage.

(U) NESP completed the Milstar Pacific Operational Network Test (ONT) in June 1995. In August 1995, NESP terminals successfully participated in the COMPTENVFOR-conducted OT-IV of the UFO/E Satellite 4 (EHF portion).

(U) The second Milstar satellite (DFS-2) was launched in November 1995. NESP terminals successfully participated in Milstar System Test (MST) 8000-2. In December 1995, the two on-orbit Milstar Satellites successfully transmitted the first Milstar inter-satellite message via crosslinks. When the Milstar constellation is completed in 2000, this crosslinking capability will provide worldwide ring

Navy EHF SATCOM Prog, December 31, 1995

7b. (U) Program Highlights (Cont'd):

interconnectivity while requiring only one ground station on friendly soil. Crosslinking is a unique Milstar capability in providing worldwide anti-jam connectivity.

(U) Mission Data Updates (MDUs) for Tomahawk shooters are being operationally transmitted over EHF from the Cruise Missile Support Activity, Atlantic (CMSA LANT) via the NESP terminals at Naval Computer and Telecommunications Area Master Station (NCTAMS) LANT and NCTAMS MED. Transmissions of MDUs over EHF are highly successful and have resulted in an over 400% reduction in MDU delivery time when compared to current MDU delivery paths while also providing anti-jam capabilities.

c. (U) Changes Since As Of Date --

(U) COMSOUTHFLEET and the USS Enterprise Battle Group were completely outfitted with an EHF Capability in February 1996. The USS Enterprise Battle Group represents the first Battle Group completely outfitted with EHF capabilities.

8. (U) Threshold Breaches:

(U) There are no breaches to the Acquisition Program Baseline dated March 24, 1993.

(U) There are no Munn-McCurdy Unit Cost breaches to the Acquisition Program Baseline dated March 24, 1993.

9. (U) Schedule:

b. (U) Previous Change Explanations —

(U) Due to redefinition of terminal quantities resulting from force restructure (CNO memo of 13 Jan 93), Milestone III was delayed from December 1992 to April 1993.

(U) "Recompete RFP Release" was replaced with "Follow-on Procurement RFP Release."

(U) Initial Operational Capability (IOC) was changed from January 1994 to April 1994 due to platform installation availability rescheduling.

(U) Follow-on Operational Test and Evaluation (FOT&E) was rescheduled from March 1994 to August 1994 to coincide with the first period of Milstar System Initial Operational Test and Evaluation (IOT&E).

c. (U) Current Change Explanations — None.

Note: RDTE&E units are fully configured

[U] A total of 116 units were procured under LRIP, exceeding 10% of total production. Three one-year LRIPs were approved by the Navy Acquisition Executive as the Navy terminal program was ahead of Milstar Satellite schedules as well as Army and Air Force terminal program schedules.

b. (U) Previous Change Explanations --

RD&E

Economic: Revised inflation indices.

Schedule: Budget reductions delayed development completion of some software modifications.

Engineering: Funds included in outyears for potential Milstar II modifications.

Estimating: Adjustment for current and prior inflation.

Procurement

Economic: Revised inflation indices.

Quantity: Restructured fleet communication requirements defined in February 1994 resulted in 7 fewer terminals. Decommissioning of 2 submarines

\*\*\* UNCLASSIFIED \*\*\*

Navy EHF SATCOM Prog, December 31, 1995

13b. (U) Cost Variance Analysis (Cont'd):

resulted in requirement for 2 fewer terminals.

**Schedule:** FY 94 President's Budget (PB) reductions deferred 10 terminals to outyears. FY 95 procurement budget adjustments resulted in 4 additional units being procured under the current contract instead of in the outyears as previously planned. FY 96 PB: Production completion stretchout over 7 years versus 3 years.

**Engineering:** Restructured fleet communication requirements defined in February 1994 resulted in 24 more MDR appliques. Production of emergent requirements as well as inclusion of Navy EHF Communications Controller First Article Test increased engineering costs in the FY 96 PB.

**Estimating:** Revised estimates for production support, ancillary equipment, and spares to reflect the FY 95 cost information. Adjustments for current and prior inflation. The FY 96 PB reflects revised unit prices for follow-on buy due to acquisition reform and increased reliance on COTS/GOIS.

**Support:** Support changes resulting from the procurement deferral of 10 terminals to outyears. In the FY 96 PB, Support decreases due to quantity and schedule changes, reduction of 6 support systems, and revised spares requirements based on historical data.

MILCON

**Economic:** Revised inflation indices. Economic adjustment for Negative Program Change.

**Estimating:** Revised estimates for planned projects.

**Support:** FY 95 PB deleted 5 MILCON projects no longer required for shore terminals. FY 96 PB deleted 2 remaining MILCON projects.

Design to Unit Production Costs were established in 1982 in Base Year \$ only for the total production quantity only (first three years not separately specified). Current estimate includes a Medium Data Rate communications capability not included in DTUPC configuration.

18. (U) Operating and Support Costs:

\*\*\* UNCLASSIFIED \*\*\*

Navy EHF SATCOM Prog, December 31, 1995

18a. (U) Operating and Support Costs (Cont'd):

a. (U) Assumptions and Ground Rules --

(U) Operating and support costs are the sum of all costs resulting from the operation, maintenance, and support of the terminals after acceptance into the Navy inventory. The operating costs are the sum of the cost of operating personnel and facilities, in addition to energy and software maintenance. The prime equipment inventory objective consists of 232 Ship, 70 Submarines, 60 Shore, 6 Training, and 3 Support terminals.

(U) Support costs include the following: (1) corrective maintenance labor and material at Organizational/Intermediate (O/I) and depot levels, (2) packaging and shipping costs incurred as a result of shipping failed and repaired items between organizational and depot level maintenance facilities, (3) preventive maintenance labor and material costs, (4) Support and Test equipment maintenance and material costs, (5) O/I and depot level maintenance shop spare costs, (6) O/I and depot level inventory storage costs, (7) documentation maintenance costs, (8) replenishment spare costs, (9) supply system management costs and, (10) the cost of training operators and O/I and depot level maintenance personnel.

(U) Source of data: Program Life Cycle Cost Estimate (PLOCCE) prepared for MS III approval decision granted April 1993.

b. (U) Costs -- (FY 1990 Constant (Base-Year) Dollars in Thousands)

| Cost Element             | Avg. Annual Cost Per Terminal | N/A |
|--------------------------|-------------------------------|-----|
| Personnel                | 18.0                          | N/A |
| Direct Depot Maintenance | 39.0                          | N/A |
| Sustaining Investment    | 41.0                          | N/A |
| Other Direct Costs       | 0.0                           | N/A |
| Total                    | 98.0                          | N/A |

c. (U) Contractor Support Costs -- None.

5. (U) Related Programs:

PATRIOT PAC-3

6. (U) Mission and Description:

The mission of the Theater High Altitude Area Defense (THAAD) system is to defend against Theater Ballistic Missiles (TBMs) at long ranges and high altitudes. THAAD's long range capability will protect U. S. and allied Armed Forces, broadly dispersed assets and population centers against TBM attacks. THAAD's capability to intercept at high altitudes allows multiple intercept opportunities and will significantly mitigate the effects of weapons of mass destruction. The THAAD System consists of missiles, launchers, radar(s), battle management/command, control, communications and intelligence (BM/C3I) units, and support equipment. The THAAD radar utilizes state-of-the-art radar technology to accomplish its required functions of threat attack early warning, threat type classification, interceptor fire control, external sensor cueing, launch and impact point estimation, and kill assessment after intercept. The THAAD program includes an option for building a prototype called the User Operational Evaluation System (UOES). This UOES plan consists of building 40 missiles with 4 launchers, 2 BM/C3I units, 2 radars, and support equipment. The UOES will be used for early operational assessment and testing, allowing the user to influence the design in the development process. Additionally, the UOES will be available for a Commander-in-Chief to consider deploying during a national emergency. The THAAD System does not replace another system.

7. (U) Program Highlights:

a. (U) Significant Historical Developments --

The Theater High Altitude Area Defense System (THAAD) requirement was initiated as a Concept Demonstration Program in 1990. Detailed system concepts were solicited from three industry teams during concept exploration and definition studies conducted August 1990 - May 1992. The THAAD System (formerly Upper Tier Theater Missile Defense System, UTTMDS, until the title change to THAAD in November

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

THAAD System, December 31, 1995

7a. (U) Program Highlights (Cont'd):

1994) was approved at Milestone Decision Review I January 1992 for the Demonstration/Validation (Dem/Val) acquisition phase I. THAAD was assigned to the Program Executive Office Missile Defense (formerly Global Protection Against Limited Strikes) July 1992. The Dem/Val contract was awarded to Lockheed Missiles and Space Company (LMSC) September 1992. The Initial Design Review was successfully conducted January 1993. Throughout FY93, extensive efforts led to a successful Final Design Review in November 1993 for the Dem/Val design and the system configuration for early flight tests. A Low Mass Interceptor lethality test program was initiated with favorable tests results. In response to the desire of the U.S. Army Air Defense Artillery School (USAADASCH) for commonality in launcher maintenance and training, the launcher design was changed to the Palletized Loading System (PLS) August 1993. The Under Secretary of Defense for Acquisition and Technology directed, in January 1994, that the THAAD missile be nuclear hardened in flight. The contract was modified July 1994 to incorporate this effort. Final Design Review Update of the Dem/Val design was completed May 1994.

The Ground Based Radar (GBR) Program evolved from the Ballistic Missile Defense Organization (BMDO) Terminal Imaging Radar (TIR) Project which supported the BMDO in their sensor programs. This program evolved into the GBR-X in January 1988 and was again restructured to support near term goals of the Missile Defense Act of 1991 to include Theater Missile Defense (TMD) and Strategic Defense System protection against limited attacks. The Milestone I Defense Acquisition Board (DAB), 21 January 1992, and the UTMDS Acquisition Decision Memorandum (ADM), 28 January 1992, provided the basis for the current Family of Radars Dem/Val contract which was awarded September 1992.

b. (U) Significant Developments Since Last Report --

The first THAAD missile was launched at White Sands Missile Range (WSMR) 21 April 1995. All primary and secondary flight test objectives were achieved. The second THAAD missile was launched 31 July 1995. This was a planned non-intercept, guidance and control test. Shortly after leaving the canister, the missile executed the THAAD Energy Management Steering (TEMS) maneuver and then reoriented on the planned flight path. The missile continued to internally navigate with respect to the simulated target trajectory through Kill Vehicle (KV)/booster separation. The missile velocity was higher than expected and the missile corrected its flight path for a higher than expected target engagement to compensate for a shorter time of arrival. Following KV/booster separation, the KV received an in-flight target update and updated its trajectory. The increased KV velocity plus the higher altitude flight path exceeded the range safety parameters fifty-three seconds into the flight. The Ground

\*\*\* UNCLASSIFIED \*\*\*

THAAD System, December 31, 1995

**7b. (U) Program Highlights (Cont'd):**

Based Auto Destruct System (GBADS) correctly assessed the KV trajectory and commanded the flight termination event. Data analysis indicates a high probability that the FT-1 proven flare did not deploy. This event would result in a higher missile velocity and a higher altitude flight path. If the flight had not been terminated, it appears that the KV would have flown within simulated target trajectory intercept volume at acquisition. The third THAAD flight was a non-intercept fly-by test against a Storm Target conducted at WSMR 13 October 1995. This flight added the Storm Target, the actual system Battle Management Command, Control, Communications, and Intelligence, the THAAD radar in the "shadow mode," and additional software complexity. The fourth THAAD flight (the first intercept attempt) occurred on 13 December 1995 at WSMR. The THAAD flight test was not successful in achieving the exo-atmospheric intercept, but did have significant accomplishments. The missile successfully performed the TEMS maneuver, flare deployment, booster separation, in-flight navigation, and seeker shroud separation. The THAAD radar operated in a "shadow" role and maintained a solid track on both the interceptor and the target.

The first THAAD User Operational Evaluation System (UOES) Battery was activated at Ft. Bliss 6 June 1995.

The THAAD and Theater Missile Defense Ground Based Radar Project Offices merged 30 Jun 95, forming the THAAD System Project Office.

The EMD RFP was released 31 October 1995 and then it was consequently withdrawn 1 November 1995 as a result of OSD guidance to reassess all Ballistic Missile Defense programs.

Lockheed Martin Courtland Operations began performing all missile integration, assembly, and test operations for full missile round assemblies beginning with flight test vehicle-06 in November 1995.

There were eleven full-scale and ten sub-scale light-gas-gun tests successfully conducted. The lethality test series demonstrated the kill effectiveness of the objective kill vehicle design, established a THAAD lethality database, and supported Parametric Endo/Exo lethality simulation modeling for accreditation.

The THAAD System is expected to satisfy mission requirements.

This is an RDT&E-only SAR in accordance with Title 10, United States Code, Section 2432, "Selected Acquisition Reports."

THAAD System, December 31, 1995

7c. (U) Program Highlights (Cont'd):

c. (U) Changes Since As Of Date --  
Gel Divert Attitude Control System (DACS) was terminated 29 January 1996 in a decision to save costs on the program. Liquid DACS is currently planned for the EMD missile.

The fifth THAAD flight test fired on 22 March at WSMR failed to intercept a Hera target. Both the target and interceptor launched as expected. However, preliminary analysis indicates that the interceptor experienced problems after booster separation causing loss of command and control functions. This resulted in the Kill Vehicle flying a ballistic trajectory until terminated by range safety. More detailed analysis of the flight test data is ongoing to pinpoint the specific cause of the missed intercept. The THAAD Palletized Loading System Launcher was used for the first time in this flight test, and it appears to have performed all the functions as expected. The THAAD radar appears to have successfully shadowed the mission by tracking both the target and the interceptor throughout their trajectories.

The launcher sub-contract was completed for the Dem/Val phase with the delivery of launcher #4 to LMMS-Huntsville on 9 February 1996.

A Build 2 BM/C3I Critical Design Review (CDR) was successfully conducted at Litton Data 21-22 February 1996.

Recent budgeting decisions caused significant replanning of the THAAD System program. These budgeting decisions are being validated through BMDO program replanning. Therefore a current comprehensive BMDO program plan is not available for this December 1995 SAR.

The December 1995 SAR content, especially the program current estimate, reflects program information truncated at FY01, consistent with recent budgeting decisions. This SAR contains blanks or "To Be Determined" in place of outyear funding and therefore the current estimate only reflects totals through FY2001. Similarly, the schedule milestones only reflect estimates contained in the recent budgeting decisions.

Truncation of program estimates creates artificially negative cost variances as shown in Section 13. Program totals and cost variances will significantly change once BMDO/Army complete and report on the new program estimate. BMDO plans to submit an exception SAR reflecting total program estimates to Congress in May, for the quarter ending March 31, 1996.

THAAD System, December 31, 1995

8. (U) Threshold Breaches:

Recent program budget decisions prompted BMDO/Army to replan and restructure the THAAD System to produce new total program cost and schedule estimates. Preliminary program analysis indicates that the current Acquisition Program Baseline (APB) (dated February 13, 1995) cannot be recovered as new program planning is underway.

Munn-McCurdy unit cost reporting is not applicable for this pre-Milestone II program.

9. (U) Schedule:

b. (U) Previous Change Explanations --

GBR EMD contract award changed from NOV 96 to SEP 96 to align with RFP release and award goals.

The THAAD Dem/Val contract award delay from JUN 92 to JUL 92 was caused by late release of the RFP. The GBR Dem/Val contract award changed from JUN 92 to AUG 92 to accommodate a RFP amendment required by the Missile Defense Act of 1991.

The THAAD Dem/Val contract award was changed from JUL 1992 to SEP 92 to reflect actual date. The GBR Dem/Val contract award was changed from AUG 92 to SEP 92 to reflect actual date.

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

THAAD System, December 31, 1995

9b. (U) Schedule (Cont'd):

The delay in the Dem/Val contract awards resulted in changes of the subsequent major Milestones.

System Delivery Complete (Less Missiles and Radars) changed from SEP 96 to OCT 96 due to the impact of FY 95 funding reduction. As a result, Milestone II DAB Review, THAAD EMD Contract Award and Milestone III DAB Review were delayed 1 month.

GBR EMD Contract Award changed from SEP 96 to NOV 96 due to the impact of the THAAD and TMD-GBR FY 95 funding shortfalls.

FUE changed from SEP 01 to DEC 01 based on the results of the THAAD missile producibility study which revised the production lead time and production rate buildup.

c. (U) Current Change Explanations --

(Ch-1) Non-APB milestone estimates contained in the recent program budget decisions that have yet been validated through BMDO replanning.

(Ch-2) The following milestones: System Delivery Complete, Milestone II DAB Review, THAAD EMD Contract Award, LRIP Review, Milestone III DAB Review, FUE; changed to TEDs until BMDO/Army completes the new program estimate.

(Ch-3) Milestone II DAB Review changed from OCT 96 to MAR 97 to reflect an estimate explicitly stated in recent budgeting decisions. This estimate has not been validated through BMDO planning.

(Ch-4) The GBR EMD contract award changed from NOV 96 to N/A as the Radar development is incorporated into the THAAD EMD System contract award.

| Subtotal          | +721.4 | -    | -      | +721.4 |
| Current Changes:  |        |      |        |        |
| Quantity          | -      | -    | -      | -      |
| Schedule          | -      | -    | -      | -      |
| Engineering       | -      | -    | -      | -      |
| Estimating        | 23.5   | -    | -      | +23.5  |
| Other             | -136.8 | -    | -      | -136.8 |
| Support           | -      | -    | -      | -      |
| Subtotal          | -113.3 | -    | -      | -113.3 |
| Total Changes     | +608.1 | -    | -      | +608.1 |
| Current Estimate  | 3773.3 | -    | -      | 3773.3 |

This current estimate truncates the program at FY2001, as the remaining program is being defined. This lack of program definition after FY2001 generates negative "Other Changes." The current estimate will significantly change as BMDO/Army prepare a new program estimate based on the replanning and restructuring of the THAAD System program.

b. (U) Previous Change Explanations --

RDTEE

Economic: Revised economic escalation indices.

Schedule: Extension of Dem/Val and delay of EMD contract award.

Engineering: Program configuration changes caused by addition of Solid State Demonstration Array design for risk

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

THAAD System, December 31, 1995

13b. (U) Cost Variance Analysis (Cont'd):

mitigation. Decrease Solid State Demonstration Array estimate to reflect down select (from 3 to 1 contractor); increased THAAD engineering costs to implement the Palletized Loading System (PLS), battery, launcher control system and risk mitigation.

**Estimating:** Revised estimate based on delayed Dem/Val contract award. Adjustment for THAAD software lines of code requirement and revised THAAD future year risk mitigation plan. Increases for TMD-GBR requirements for signal processors, 9 track Kalman filter and wideband track capability; increases resulting from reduction of National Missile Defense requirements; increases for testing (including targets) and risks; and extension of development program.

**Support:** Revised estimate for additional targets required. Refinement of THAAD targets requirement.

Explanation of Change:

THAAD major subcontractors and Lockheed contributed to the unfavorable variance changes during the last 12 months. Loral and Litton accounted for 42% of the change. Loral experienced increased overtime and staffing for manufacturing support due to technical producibility challenges, integration problems, and delivery delays with the Platinum Silicide (PtSi) seeker and packaging redesign overruns with the Indium Antimonide (InSb) seeker. Litton experienced delays and overruns in Build 2 BM/C3I software and increased overtime in developing tactical operations center software. Rocketdyne had delays in the divert attitude control system deliveries due to thruster redesign. Honeywell experienced overruns in the fabrication and testing of flight unit rate gyro packages. UTC had overruns due to booster redesign changes. Lockheed's variance changes were due to overruns in developing interface specifications, preparation for in-flight test planning, in-flight test survivability tasks, missile assembly and checkout tasks, target demonstration and radar shadow mission activities. Through Dec 95, the contract was 85% complete with Lockheed projecting a \$50M variance at completion. The PM has initiated action to extend the Dem/Val contract by six months, which will allow a replan of remaining flights and the conduct of other specific tasks.

Explanation of Change:

Increased engineering support and manufacturing costs within the antenna equipment have contributed more than 50% of the unfavorable cost variance during the past 12 months. Specific problems that continue to affect costs within the antenna are increased nonrecurring engineering (NRE) and manufacturing costs of the transmit/receive (T/R) module; increased NRE and manufacturing costs of the T/R element assembly (T/REA); and increased NRE and subcontract cost of the beamformers, AC/DC converters and antenna enclosures. Additionally, Raytheon has been spending more than was budgeted on the software development effort and the test and evaluation effort at White Sands Missile Range. The favorable schedule variance during the past 12 months is due to receipt of overdue antenna equipment material and completion of past due manufacturing tasks associated with the antenna equipment.

With the program approximately 90% complete, the project office is confident that most problems have been identified and the cost impacts of corrective actions have been considered in the current estimate to completion.

5. (U) Related Programs:

F/A-18 Hornet; Joint Tactical Information Distribution System (JTIDS).

6. (U) Mission and Description:

The Multifunctional Information Distribution System (MIDS) is a multinational (U.S., France, Germany, Italy, and Spain) cooperative development program established to design, develop and deliver low-volume, lightweight tactical information system terminals for U.S. fighter aircraft, as well as foreign fighter aircraft, helicopters, ships and ground sites. The MIDS program will produce a terminal that is functionally equivalent to and interoperable with the JTIDS Class 2 terminal, but is smaller, lighter, more reliable, less costly, and compatible with all the Participants' designated platforms. The U.S. effort includes both participation in the terminal development, and the integration and test of the terminal in the F/A-18, ships, submarines, and U.S. Army platforms. The MIDS program office will also manage an accelerated separate procurement of terminals for some Air Force F-15s; those terminals will incorporate the commercial open architecture that has been adopted for MIDS-LVT. MIDS-LVT does not replace an existing DoD system.

7. (U) Program Highlights:

a. (U) Significant Historical Developments --

In April 1986, following enactment of the Nunn-Quayle Amendment to the Arms Export Control Act, the Under Secretary of Defense for Research and Engineering (USD(R&E)) proposed a NATO cooperative development of the JTIDS Low-Volume (LV) Class 2 terminal (the MIDS LV terminal), which would be smaller, lighter, fully compatible with, and as capable as the JTIDS Class 2 terminal. The proposal called for the U.S. to lead the project and for a U.S. contractor to lead an international industrial team (Principal Study Contract Team (PSCT)) in performing the MIDS Project Definition Phase (Phase I) analyses. In June 1986, the USAF was assigned to represent the U.S. in Phase I. In early 1987, a Memorandum of Understanding (MOU) signed by the Under Secretary of Defense for Acquisition (USD(A)) and equivalent officials from each of the other nations formalized agreement for Phase I. The MOU stipulated Singer-Kearfott (now GEC-Marconi) as the lead U.S. contractor.

In 1987, each nation awarded a Phase I contract to one of their national contractors to cooperatively define the requirement for a

\*\*\* UNCLASSIFIED \*\*\*

7a. (U) Program Highlights (Cont'd):

MIDS LV terminal; address the feasibility of producing the terminal; and produce a detailed plan for Engineering and Manufacturing Development (EMD) of the MIDS LV terminal. Singer-Kearfott was the U.S. contractor. The PSCT delivered a Phase I End-of-Study report in early 1989.

On 11 May 1989, the Under Secretary of the Navy (USSECNAV) determined that the MIDS LV terminal would be the most effective means to incorporate Tactical Digital Information Link J (TADIL J) capability into the F/A-18. Concurrently, the USAF determined that the F-16 should no longer be a candidate for the MIDS LV terminal. On 30 October 1989, the Assistant Secretary of Defense for Command, Control, Communications, and Intelligence (ASD(C3I)), determined that only the Navy had a MIDS platform requirement and requested that it take the lead in MIDS with USAF support.

In phase I, the Navy operated under a Program Memorandum of Understanding (PMOU) with the nations of France, Germany, Italy, and Spain concerning general arrangements, and Supplement No.1 to the PMOU concerning initial program administration and pre-engineering and manufacturing development (Pre-EMD). The PMOU and its Supplements specify each country's share of the resource requirement for commonly funded items, with the U.S. share being 41%. The PMOU and its Supplements also require that specific national requirements be funded by the nation levying the requirement.

The Pre-EMD Phase of the program established an International Program Office (IPO). Optional national EMD risk reduction efforts continued during this phase. Concurrently with the MIDS-LVT decisions, the Navy initiated a Pre-EMD study with McDonnell-Douglas in June 1991. The purpose of this study was to determine the installation/integration requirements for MIDS-LVT aboard the F/A-18 aircraft.

In May, 1993, an Acquisition Review Board (ARB) approved integration of the MIDS-LVT into the F/A-18. The Milestone II DAB Acquisition Decision Memorandum (ADM) was signed 17 December 1993 authorizing contract award, initiating a 6-month study of options to reduce EMD program cost and schedule, and with direction to incorporate MOEs into the MIDS TEMP.

Supplement 2 to the PMOU was signed in February 1994, entering the program into the EMD phase. The EMD contract was awarded on 18 March 1994. The study directed by the ADM was completed, and the results approved by USD(A&T). A TEMP incorporating MOEs was approved by DT&E and DOT&E. A contract modification to implement the restructured program has been executed, and exit criteria were promulgated in a

\*\*\* UNCLASSIFIED \*\*\*

MIDS-LVT, December 31, 1995

7a. (U) Program Highlights (Cont'd):

USD(A&T) memorandum of 5 October 1994.

Technical and cost studies were conducted by the Army to identify the costs and benefits of Army adoption of a MIDS variant terminal that could be procured during the MIDS production phase in place of the more costly JTIDS Class 2M. The studies identified the potential for significant life-cycle cost savings.

The Navy also conducted cost and technical studies related to the transition from the use of JTIDS Class 2 terminals to MIDS on ships, and a Navy Program Decision Memorandum (NPDM) was promulgated on 5 January 1995 which directed the transition from procurement of JTIDS Class 2 terminals to MIDS-LVT for Navy ships beginning in FY-99.

Studies continued on the most cost effective method of providing a reduced functionality Link-16 terminal for some F-15s. The Air Force formally established its requirement for an F-15 Fighter Data Link in late December 1994.

b. (U) Significant Developments Since Last Report --

**Basic MIDS-LVT Developments:** In March 1995, Integrated Baseline Reviews were conducted at each of the European contractors participating in MIDS-EMD development, and a similar review was conducted at the U.S. contractor, GEC-Marconi, in late April 1995. The MIDS-LVT Critical Design Review process commenced in November 1995 per the revised MIDS-LVT schedule directed by USD(A&T).

**U.S. Army Developments:** On 11 April 1995, the Army formally requested the development of a MIDS-LVT variant to provide a cost effective alternative to the JTIDS Class 2M during the MIDS production phase, and a contract modification to the existing contract was executed in August 1995 to develop, fabricate, and test MIDS-LVT(2) terminals for Army applications. The architecture of the restructured MIDS-LVT program has allowed the development of a variant for the Army that will not require any modifications to Army platforms which have previously integrated the JTIDS Class 2M, and more than 80 percent of the MIDS-LVT hardware will be identical between the basic MIDS-LVT and Army variant configurations.

**U. S. Air Force Developments:** Studies and analysis of the cost and benefits of alternatives to meet the USAF requirement for a reduced functionality fighter data link for the F-15 continued from January through June 1995, including a detailed cost analysis by the DoD Cost Analysis Improvement Group (CAIG). On 1 June 1995, USD(A&T) issued an Acquisition Decision Memorandum (ADM) directing that the Air Force requirement be met through a procurement managed by the MIDS International Program Office. The ADM also stated the office would

MIDS-LVT, December 31, 1995

7b. (U) Program Highlights (Cont'd):

be expanded and become a joint program office with the assignment of Air Force and Army personnel. The ADM terminated any separate development or acquisition efforts, and established an integrated product team to recommend an acquisition strategy for the F-15 terminal and MIDS-LVT production. On 15 August 1995, USD(A&T) issued another ADM based upon the recommendations of the integrated product team. The ADM directed that the terminal for the F-15 incorporate the open commercial architecture standards of MIDS and use a streamlined acquisition process. Subsequently, the FY-96 Appropriations Conference Report identified funds within the F-15 modification program to commence qualification of the F-15 Fighter Data Link (FDL) terminal, and requested USD(A&T) assurance that the acquisition strategy would not place U.S. companies at a competitive disadvantage.

c. (U) Changes Since As Of Date --

Related to the MIDS procurement of an FDL for some USAF F-15's, USD (A&T) provided the requested letters of assurance in early February 1996, and a Request for Proposals was issued on 22 February upon completion of Congressional coordination.

8. (U) Threshold Breaches:

There are no breaches to the Approved Acquisition Baseline dated March 8, 1994. There is no Munn McCurdy unit cost breach.

9. (U) Schedule:

Acronyms:

IRT - Integration Readiness Testing

b. (U) Previous Change Explanations --

Previous changes were the result of the restructuring of the MIDS-LVT Program by USD (A&T) to incorporate open architecture standards, and acceleration of development/integration activities.

c. (U) Current Change Explanations --

(Ch-1) Critical Design Review commenced November 1995.

(Ch-2) Revised F/A-18 TECHEVAL and OPEVAL dates as a result of restructured MIDS-LVT program approved by USD(A&T). A revised Acquisition Program Baseline is in review that incorporates MIDS on Ships (MOS) and Army variant development. Due to the previous integration of Link-16 on Navy ships, the test schedule for MIDS on Ships will precede the F/A-18, and will allow an earlier transition of MIDS into full rate production. The next SAR will reflect the milestones for MIDS on Ships and Army test and evaluation.

(Ch-3) Dates are related to F/A-18 test and evaluation milestones.

(Ch-4) Dates are related to F/A-18 test and evaluation milestones. MOS will allow acceleration of these dates, which will be reported in the next SAR.

Note: This SAR does not report MIDS F-15 Fighter data Link (FDL) estimates. A revised APB which incorporates FDL milestones is in review. The next SAR will incorporate milestone data. MIDS FDL costs are included in the overall F-15 modification program budget.

Explanation of Change:

There are various causes that contribute to the minor negative schedule variance, including the study and implementation of customer requested changes, and the management challenge of working with numerous international customers with different interface requirements that required harmonization.

Primary drivers for the minor negative cost variance have been the implementation of risk mitigation plans, specifically plans to preserve the terminal software development schedule, and a plan to reduce the technical integration risk of the platforms using the MIL-STD 1553 or STANAG 3910 data buses.

Note: Additional Contract Comments

The contract value reflects international effort, including the U.S., France, Italy, Germany, and Spain. The MIDS prime contract is

\*\*\* UNCLASSIFIED \*\*\*

MIDS-LVT, December 31, 1995

15. (U) Contract Information (Cont'd):

a CPIF/AF that was awarded on 18 March 1994. The contractor commenced CPR submissions in October 1994 in accordance with the revised architecture of the MIDS as briefed and approved by USD(A&T). Contract options are not included in the PM's EAC. The Contract Budget Baseline and PM's estimated costs include Army development costs and additional EMD terminals for the Army and Navy. A formal design to cost program is not established in the contract; however, the contractor and program office are pursuing reductions to production unit costs, and a production unit cost exit criterion for LRIP has been established.

Explanation of Change:

This effort's CSSR now reports a cumulative positive cost variance and a cumulative negative schedule variance. These variances are primarily the result of changes to the Statement of Work and schedule shifts since the inception of the contract. Schedule variance is expected to begin recovery in 3rd quarter 1996. With 17.5% of the budget spent, a recovery to the planned schedule is possible.

Note: Additional Contract Comments

The F/A-18 Integration contract (CPFF) was awarded to McDonnell Douglas Aerospace (MDA) to perform the F/A-18 MIDS hardware integration in July 1994.

Obligations and expenditures reflect program office records as of December 31, 1995.

17. (U) Production Rate Data:

- a. (U) Deliveries to Date -- 0/0.
- b. (U) Approved Design-to-Cost Objective -- N/A.

18. (U) Operating and Support Costs:

- a. (U) Assumptions and Ground Rules --

The O&S Cost portion of the Program Manager Life Cycle Cost Estimate of April 1993 depicts a 24-year support period of terminals installed on 630 F/A-18 aircraft. This period includes a phase-in, steady-state, and phase-down profile with a terminal operational life estimated to be 15 years. The annual operating hours per aircraft for peace-time deployment are estimated to be 400. The maintenance concept analyzed is the three level structure (i.e., Organizational, Intermediate and Depot) and assumes the availability of Consolidated Automated Support System (CASS) stations at the Intermediate and Depot levels of maintenance. The terminal reliability and maintainability characteristics used are consistent with the requirements contained in the Operational Requirements Document. Other pertinent cost estimates include use of values experienced by analogous systems including JTIDS and the AN/ARC-182 radio.

**6. Mission and Description:**

Crusader will be the indirect fire support system providing direct and general support fires to the maneuver forces on the battlefield. Crusader consists of a self-propelled howitzer (SPH), and a resupply vehicle (RSV). Crusader responds to the battlefield deficiencies identified in the Close Combat Battlefield Functional Mission Area and the Fire Support Battlefield Functional Mission Area and fulfills the need for an indirect fire weapon system that has increased range and can survive through autonomous operations.

Crusader's SPH will provide close, tactical, and operational fires during offensive and defensive operations; have a 155mm primary armament with significantly increased capabilities over the current M109-series fleet; provide increased rate-of-fire, hold more ammunition, be more responsive and survivable on the battlefield, with reduced manpower requirements; provide increased lethality; be deployable worldwide; and, provide for forward maintenance and employ future maintenance concepts.

The companion vehicle to the SPH will be Crusader's RSV. The RSV will sustain the SPH with ammunition and fuel as it provides close, tactical, and operational fires; be a self-propelled armored vehicle with significantly increased capabilities over the current system, M992A1 FAASV; automate resupply functions; provide increased payload capability, and increased survivability with reduced manpower requirements; enable the SPH to achieve increased lethality levels and achieve independent mission execution; be deployable worldwide; and, provide forward maintenance support and employ future maintenance concepts.

**7. Program Highlights:**

**a. Significant Historical Developments --**

Early in fiscal year 1995, the Principal Deputy Under Secretary of Defense (Acquisition & Technology) signed the Acquisition Decision Memorandum (ADM) which approved Crusader to proceed into Demonstration/Validation (Dem/Val) as a single program. The ADM also directed that the Army shall plan for a Milestone II DAB or equivalent review, incorporating as many acquisition reform and streamlining measures as practical.

A letter contract was signed on December 29, 1994 with United Defense Limited Partnership to initiate development phases I and II (DEM/VAL) of Crusader. The contract engaged the expertise of five other major defense subcontractors. The subcontractors are Teledyne Vehicle Systems (Muskegon, Michigan), Lockheed Martin Defense Systems (Pittsfield, Massachusetts), Lockheed Martin Armament Systems (Burlington, Vermont), General Dynamics Land Systems (Sterling Heights, Michigan), and Electronic Data Systems (Herndon, Virginia). The contract is based upon streamlined acquisition initiatives, and

**7a. Program Highlights (Cont'd):**

upon an integrated product development philosophy with "Team Crusader" consisting of each of the contractor team players and the Army's Project Management Office.

**b. Significant Developments Since Last Report --**

The System Requirements Review (SRR) was conducted in October 1995. The SRR successfully demonstrated the decomposition of Crusader requirements down to the system segment level. The requirements allocation process is continuing and will culminate at the System Functional Review anticipated in June 1996.

Component Maturation has generally progressed well in the areas of resupply, electronics, mobility, and data. Problems have been encountered in armament maturation. These problems involved premature ignitions of liquid propellant, piston reversals and hesitations, and pressure oscillations in the Regenerative Liquid Propellant Gun (RLPG) assets. An independent Army Science Board (ASB) review of the RLPG development program, conducted October through December 1995, concluded that the program is "doable" but not without high risk, and requires additional time and 6.2 technology efforts to support weaponization.

As a result of armament maturation problems, the Army is currently considering changing from an RLPG to a solid propellant armament. The possibility of this change was acknowledged in the Crusader Milestone I Acquisition Decision Memorandum, which required the Army to continue development of a solid propellant armament as a risk mitigation measure. The change is driven by increasing RLPG cost, schedule and technical risks, and diminishing operational effectiveness differences between liquid and solid propellant armament systems.

The Crusader Senior Level Integrated Product Team Coordinating Council (SLICC) was chartered and conducted its first meeting in October 1995. The SLICC consists of 35 members from key functional areas in DA and OSD. Members of the SLICC are responsible for continuous program oversight, improved communication, problem resolution, and the development of the Integrated Program Assessment for the Crusader Milestone II decision.

The Crusader system is expected to satisfy mission requirements.

**c. Changes Since As Of Date --**

The Secretary of the Army, after consulting with the Secretary of Defense, decided on March 19, 1996 to change from a liquid propellant (LP) based armament system to a solid propellant (SP) based armament system for Crusader. The change was made after the Army Science Board

\*\*\* UNCLASSIFIED \*\*\*

Crusader (AFAS/FARV), December 31, 1995

7c. Program Highlights (Cont'd):

showed LP to have unacceptable technical, cost, and schedule risks. The timeliness of the decision allows the SP back-up program to be seamlessly inserted into the existing development contract and executed within the parameters of the Acquisition Program Baseline (APB).

8. Threshold Breaches:

There are no breaches to the approved Acquisition Program Baseline (APB) dated January 4, 1995.

9. Schedule:

Explanation of Change:

The performance measurement baseline (PMB) is being incrementally implemented. The change in contract price from \$61.4M to \$148.1M represents the implementation of the next portion of the RA/CM efforts. The remaining two portions of the PMB are anticipated to be implemented during the next reporting period.

Cost variance is primarily attributable to additional efforts needed in requirements analysis and test events encountered in armament maturation (see paragraph 7b). The schedule variance is primarily attributable to the planning required to switch to a solid propellant armament system for Crusader causing inefficiencies in the Requirements Analysis process. The schedule variance will likely result in the System Functional Review (SFR) being rescheduled from

**4. Program Elements/Procurement Line Items (Cont'd):**

RDT&E PROGRAM ELEMENT: 64233F FY94 and prior: Project 644102

**5. Related Programs:**

None.

**6. Mission and Description:**

The Joint Primary Aircraft Training System (JPATS) is a joint USAF/USN program to replace USAF's T-37B aircraft, USN's T-34C aircraft, and their associated Ground Based Training Systems (GBTS). The aircraft and GBTS will be used to train entry-level students in the fundamentals of flying so they can transition into advanced training tracks leading to qualification as military pilots, navigators, and Naval Flight Officers.

The program includes the purchase of aircraft, simulators, and associated ground-based training devices, training management system, instructional courseware, and logistics support. The USAF will train at 6 bases and the USN at 3 bases. The USAF will have contractor logistics support for the off-aircraft equipment and the GBTS. The on-equipment maintenance will be performed by third party contractor or organically supported. The USN will employ total contractor logistics support (CLS) for the entire aircraft and GBTS.

**7. Program Highlights:**

**a. Significant Historical Developments --**

On 15 Feb 89, the DOD Trainer Masterplan was approved. The strategy includes jointly meeting the Navy and Air Force, near- and long-term, primary aircraft training requirements.

In Dec 90, the Mission Need Statement was validated by the Joint Requirements Oversight Council; it baselined JPATS critical requirements; the Joint Services Operational Requirements Document was published.

In Nov 91, a Memorandum of Agreement was signed by the following: USAF Chief of Staff, USN Chief of Naval Operations, Assistant Secretary of the Air Force (Acquisition) and Assistant Secretary of the Navy for Research, Development and Acquisition, documenting the services agreement to acquire JPATS.

In Jan 92, a Joint Acquisition Strategy Panel was convened. On 29 May 92, the Conventional Systems Committee determined that the program was ready for the Defense Acquisition Board (DAB) review. The Jun 92 DAB was postponed.

In Jun 92, ORD I was signed.

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

JPATS, December 31, 1995

7a. Program Highlights (Cont'd):

On 19 Jan 93, the DAB conducted a Milestone 0/I Review. Milestone 0 was approved with the Air Force designated lead service. The Acquisition Program Baseline (APB) was also approved on 19 Jan 93. Milestone I was approved contingent upon completion of several actions prior to Request for Proposal (RFP) release. Actions included Under Secretary of Defense for Acquisition USD(A) approval of the Acquisition Strategy Report (ASR).

On 19 May 93, a second DAB was convened. On 7 Jul 93 a new Acquisition Decision Memorandum (ADM) was signed, with the government sequentially selecting the aircraft and the GBTS contractors; however, the aircraft contractor was the prime contractor with the GBTS contractor as the prime's subcontractor. An updated Operational Requirements Document (ORD) II dated 15 Aug 93, was released 3 Jan 94.

In Mar 94, the program's acquisition strategy changed, which resulted in delaying the release of the RFP. A new ASR and APB were approved and implemented. The updated ASR required the prime contractor to conduct the GBTS source selection and subsequently choose the GBTS contractor.

Source Selection began on 18 May 94 with the RFP release to industry. The flight evaluation phase of source selection began on 24 Jul 94 and was successfully completed on 30 Sep 94.

On 24 Oct 94, the Source Selection Initial Evaluation Briefing was presented to the Source Selection Advisory Council.

On 24 Jan 95, an amendment to the RFP was released to the JPATS contenders. The amendment contained new Air Force and Navy funding profiles. These new funding profiles resulted in a change to the annual procurement quantities. Because of the amendment, the Milestone II and Manufacturing Development Contract award dates slipped from Feb 95 to Aug 95.

b. Significant Developments Since Last Report --

On 22 Feb 95, a Program Deviation Report and a Baseline Change Request were submitted to the PRO. The Baseline Change Request recommended a delay in submitting a new program baseline until after the DAB in Aug 95.

The Source Selection Authority was briefed on 20 Jun 95. The JPATS competition winner was announced on 22 Jun 95 by the Secretary of the Air Force. Protests were filed following the announcement; contract award was delayed. No changes to the baseline or updates to the current estimates could be made until after all protests were

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

JPATS, December 31, 1995

7b. Program Highlights (Cont'd):

resolved.

The JPATS Milestone II DAB Readiness Review was conducted on 4 Aug 95. A paper DAB was approved by USD(A) A&T. All DAB documentation was approved and the ADM was signed on 9 Aug 95 allowing the JPATS contract award to proceed once the protest(s) were resolved.

JPATS was redesignated an Acquisition Category 1C program.

On 22 Nov 95, the General Accounting Office (GAO) released its decision on the Rockwell protest. All Rockwell allegations were denied.

The JPATS program will satisfy mission requirements.

c. Changes Since As Of Date --

On 5 Feb 96, the GAO released its decision on the Cessna protests. All Cessna allegations were denied.

On 5 Feb 96, Beech Aircraft Corporation was awarded the JPATS Lot 1 contract and the CLS contract.

On 14 Feb 96, the first production lot (Lot 2) option was exercised. It provides for the first 3 production aircraft.

8. Threshold Breaches:

There are no breaches to the approved APB dated 4 Aug 95 and no Numm-McCurdy unit cost breaches.

Demonstrated performance in Section 10a. is TBD as contract award did not occur until 5 Feb 96.

9. Schedule:

a. Milestones --

| Start  | FEB 98               | N/A                    | N/A                 |
| Finish   | JUL 98               | N/A                    | N/A                 |
| Initial Operational Capability (AF)                    | MAR 00               | FEB 01                 | AUG 01 (Ch-02)      |
| Full Operational Capability (AF)                       | SEP 07               | N/A                    | N/A (Ch-01)         |
| Initial Operational Capability (Navy)                  | APR 03               | JUL 03                 | JUL 03 (Ch-02)      |
| Full Operational Capability (Navy)                     | SEP 10               | N/A                    | N/A (Ch-01)         |

b. Previous Change Explanations --

Initial Operational Capability (IOC) (AF) changed from Mar 00 to Aug 00; reduction in an upfront buy profile caused insufficient quantity to meet the Mar 00 IOC.

Milestone O/I was approved Jan 93; upon completion of action items Milestone I would be approved. These items were completed May 93.

Change in acquisition strategy: The JPATS acquisition strategy was reviewed at the second DAB on 19 May 93. A 7 Jul 93 ADM was issued, changing the acquisition strategy and requiring a revised Milestone Schedule. JPATS submitted a revised APB as of 25 Feb 94.

The JPATS' schedule slipped due to changes in the Air Force/Navy funding profiles and procurement buy quantities, and the release of an amendment to the RFP. Changes in the funding profiles for both services resulted in reductions in yearly procurement quantities. These reductions slowed JPATS' original ramp-up rates; thus, reducing

\*\*\* UNCLASSIFIED \*\*\*

JPATS, December 31, 1995

9b. Schedule (Cont'd):

deliveries and causing all Air Force and Navy milestone dates to slip. The release of the MR on 24 Jan 95 resulted in the Milestone II and Manufacturing Development Contract award dates to slip from a Feb 95 award date to an Aug 95 award date.

The 17 May 94 APB reflects these stub-items as additional milestones. Due to the approval of the 17 May 94 APB, the following items were also considered program milestones: GBTS System Integration Review (SIR), Aircraft Multi-Service Operational Test & Evaluation (MOT&E) Start/Finish, GBTS System Level Formative Evaluation (SLFE) Start/Finish, and GBTS Aircrew Training Devices (ATD) First Deliveries.

The milestone GBTS Contract Award was replaced by milestone GBTS Contract Change Proposal.

The milestone Operational Flight Trainer CDR was replaced by milestone GBTS System Integration Review (SIR).

The milestones DT&E Start/Finish were replaced by milestones Aircraft OT&E Start/Finish.

The milestone OFT First Delivery (Randolph AFB) was replaced by milestone GBTS Aircrew Training Devices (ATD) First Deliveries.

The milestones OFT DT/OT&E Start/Finish were replaced by milestones GBTS System Level Formative Evaluation (GBTS DT/OT&E) Start/Finish.

The milestones Multi-Service Operational Test & Evaluation (MOT&E) Start/Finish were replaced by milestone Aircraft Multi-Service Operational Test and Evaluation Start/Finish.

The milestone Operational Flight Trainer (OFT) PDR is no longer considered a milestone and was not replaced by an additional milestone. Due to acquisition reform and streamlining, the JPATS contractor will now determine the design at component level. The focus changed from a component level review to a system level review. The GBTS System Integration Review complies with the intent of this requirement as stated in the Integrated Master Plan.

c. Current Change Explanations --

(Ch-01): The Program Office no longer tracks these as APB milestones. The approved APB resulting from the approval of Milestone II, dated 4 Aug 95, omitted these milestones.

(Ch-02): Aircraft Critical Design Review, Milestone II, Initial Operational Capability (AF) and Initial Operational Capability (Navy)

\*\*\* UNCLASSIFIED \*\*\*

JPATS, December 31, 1995

9c. Schedule (Cont'd):

Milestone dates changed from the Planning Estimate to the Approved Program;DE due to the source selection. The change from the Approved Program;DE to the Current Estimate results from the delay in contract award because of multiple protests filed with the GAO.

(Ch-03): This is a new schedule milestone approved in the 4 Aug 95 APB.

b. Previous Change Explanations --

There has been a change to the Anthropometric Accommodation (Sitting Height in Inches) parameter from 34 to 40 inches, to 32.8 to 40 inches. The new requirement complies with the 7 Jul 93 ADM direction to accommodate not less than 80% of population of eligible women.

An administrative error was made in the Performance Characteristics section of the APB. The IFR Certified Instrumentation in ORD I and ORD II is IFR Certified (Selectable EADI/EHSI) not IFR Certified (Selectable ADI/HSI).

c. Current Change Explanations --

Demonstrated Performance is TBD due to recent contract award (5 Feb 96).

There are no Current Change Explanations required.

The Air Force and Navy are currently updating the MILCON estimates to reflect accelerating the program.

b. Quantity --

|                     |            |            |            |
|---------------------|------------|------------|------------|
| Development (RDT&E) | 2          | 1          | 1          |
| Procurement         | <u>N/A</u> | <u>711</u> | <u>711</u> |
| Total               | 2          | 712        | 712        |

JPATS' RDT&E aircraft is fully configured.

The Low Rate Initial Production (LRIP) quantities authorized by the Milestone II ADM (9 Aug 95) are up to a maximum of 108 aircraft (through Lot 7). LRIP establishes an initial production base and permits an orderly increase in the production rate to lead to full-rate production upon successful completion of operational testing. Milestone III is scheduled to occur before the exercise of Lot 7. If Milestone III is delayed and the Lot 7 option cannot be exercised on time, a break in the production line could occur. However, to mitigate any schedule risk, approval through Lot 7 was

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

JPATS, December 31, 1995

11b. Total Program Cost and Quantity (Cont'd):

sought and approved at Milestone II. Including the Lot 7 quantities in the LRIP authorization will exceed the 10% quantity threshold normally established for LRIP. However, approval at this time provides the program office latitude to manage risk. Given the pilot program status, a management reserve in the schedule is reasonable. The program office will execute subsequent production contracts for the remaining aircraft with a maximum anticipated production rate of five per month.

Due to the recent reductions to procurement funding, target quantities for the Air Force in FY01 and for the Navy in FY00 and FY01 cannot be procured. In FY01, the Air Force can procure 27 aircraft, which is 3 less than the target quantity. The Navy can procure 7 aircraft in FY00, which is 1 less than target, and 22 aircraft in FY01, which is 2 less than the target quantity.

c. Foreign Military Sales/International Cooperative Programs -- None.

d. Nuclear Costs -- None.

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

JPATS, December 31, 1995

17. Production Rate Data:

a. Deliveries to Date -- 0/0.

Footnote: Design to Cost goals were not established at the Milestone II decision. Design to cost is inappropriate as the JPATS aircraft is based on an existing aircraft design.

b. Approved Design-to-Cost Objective -- N/A.

18. Operating and Support Costs:

a. Assumptions and Ground Rules --

The operations and support costs are based on the purchase of 711 aircraft as well as Aircrew Training Devices (ATD), Training Integration Management System (TIMS), development and conversion courseware, and CLS which will be provided by Raytheon Aerospace.

Section 18b consists of five elements. Mission Personnel includes the cost of military and civilian system-related personnel involved in the operation of this system. Unit-Level Consumption includes the cost of fuel resources and unit level consumables. Sustaining Support includes the costs of replacement support equipment, modification kits, sustaining engineering, software maintenance, and simulator operations for the aircraft system. Indirect Support includes the costs of personnel support for specialty training, permanent changes of station and medical care. Finally, Program Management includes the cost of managing the system by the Air Force Flight Training System Program Office.

Section 18c consists of costs for contract labor, materials, and overhead incurred in providing the logistics support required by an aircraft system, subsystem or associated support equipment. Aircraft CLS covers depot maintenance for both the Air Force and the Navy, and covers organizational and intermediate maintenance activities for the Navy. GBTS CLS support is provided separately.

Typically, CLS is estimated in Base Year (BY) and not converted to Then Year due to the length of the O&S support relative to the number of years for which inflation indices are available. Due to the lack of inflation indices through 2038, the dollar amounts in this section are in BY91.

This reflects the information briefed by the OSD Cost Analysis Improvement Group at the DAB reflecting the JPATS Most Probable Life Cycle Cost documenting the Source Selection dated 25 Jul 95.

\*\*\* UNCLASSIFIED \*\*\*

JPATS, December 31, 1995

18b. Operating and Support Costs (Cont'd):

b. Costs -- (FY 1991 Constant (Base-Year) Dollars in Millions)

| Cost Element           | Avg Annual Cost Per<br>JPATS PROGRAM | Avg Annual Cost Per<br>* |
|------------------------|--------------------------------------|--------------------------|
| MISSION PERSONNEL      | 77.5                                 | N/A                      |
| UNIT-LEVEL CONSUMPTION | 14.3                                 | N/A                      |
| SUSTAINING SUPPORT     | 4.5                                  | N/A                      |
| INDIRECT SUPPORT       | 32.0                                 | N/A                      |
| PROGRAM MANAGEMENT     | 5.4                                  | N/A                      |
| Total                  | 133.7                                | N/A                      |

\* The antecedent systems are the T-37 for the Air Force and T-34 for the Navy.

At the JPATS Milestone I decision, the requirement for a Cost/Operational Effectiveness Analysis (COEA) was waived due to the streamlining initiatives for pilot programs. Thus, the direct comparison to the antecedent systems was not prepared.

c. Contractor Support Costs -- (Current (Then-Year) Dollars in Millions)

| Funding      | FY1995<br>& Prior | FY1996 | FY1997 | Balance<br>To<br>Complete | Total  |
|--------------|-------------------|--------|--------|---------------------------|--------|
| Aircraft CLS | ---               | ---    | ---    | 2892.1                    | 2892.1 |
| GBTS CLS     | ---               | ---    | 0.5    | 2293.7                    | 2294.2 |
| Total        | ---               | ---    | 0.5    | 5185.8                    | 5186.3 |

NOTE: THESE COSTS ARE PROVIDED IN BY91.

CLS AIRCRAFT COSTS ASSOCIATED WITH FY95 THROUGH FY97 ARE NOT DETAILED AS COSTS ROUND TO < .1.

SEALIFT, December 31, 1995

**6. Mission and Description:**

To carry Army equipment for afloat prepositioning and to transport ARMY/USMC or other services surge equipment to include wheeled/tracked vehicles, helicopters and cargo from COMUS to contingency area.

**7. Program Highlights:**

**a. Significant Historical Developments --**

The JCS Mobility Requirement Study (MRS) defined overall Strategic Sealift requirements. The Operational Requirements Document (ORD) was validated by the Joint Requirement Oversight Council on June 18, 1992, and updated September 14, 1992 and January 25, 1994. The Acting ASN(RD&A) accepted the NPDN of August 17, 1992 as the Milestone I Decision Meeting in his memorandum signed on June 9, 1993. The FY93 Defense Authorization Act established the National Defense Sealift Fund (NDSF) providing \$613M for the fund and transferred previously appropriated Ship Construction, Navy (SCN) dollars in the amount of \$1.875B into the fund. Program was designated ACAT IC by USD(A) on March 5, 1993. Milestone II approval was granted for Conversions on July 30, 1993 and New Construction on August 30, 1993. The Acquisition Program Baseline (APB) was approved on July 20, 1993. MacGregor-NAVIRE (USA) was competitively awarded a FFP/AF contract on March 29, 1993 for procurement of one shipset of Class Standard Equipment (CSE) with options for up to nineteen additional shipsets. On July 30, 1993 Newport News Shipbuilding (NNS) and National Steel and Shipbuilding Company (NASSCO) were competitively awarded FPI without economic price adjustment contracts for detail design and conversion of a total of five foreign built ships (two at NNS and three at NASSCO). On September 2, 1993 Avondale Industries, Inc. (AII) and on September 15, 1993 NASSCO were competitively awarded FPI with economic price adjustment (escalation) contracts for detail design and construction of one ship each with options for five more ships each for a total of 12 new construction ships under contract. After the conversion and new construction awards, it was determined that 19 ships would meet the 5 million square foot requirement. The remaining two hulls are planned to be solicited through limited competition between the two current new construction yards with awards and advance procurement in FY98 and ship construction in FY99. The conversion programs at NNS and NASSCO have respectively experienced a series of delivery schedule extensions which currently range from 14-17 months for all five conversion ships. A letter was submitted to NAVCOMPT (FMS-2) on September 8, 1995 which identified a growth in program funding requirements and is currently under review. Based on anticipated changes in outyear escalation indices, revised funding requirements will be made available to support the FY98 budget submissions.

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

SEALIFT, December 31, 1995

7b. Program Highlights (Cont'd):

b. Significant Developments Since Last Report --

The Avondale option for one additional new construction ship was exercised on December 27, 1995. The third option for four additional ship sets of CSE was exercised on December 21, 1995. The NASCO new construction option was exercised on January 30, 1996.

The program will satisfy all mission requirements.

c. Changes Since As Of Date --

The NASCO new construction option was exercised on January 30, 1996.

8. Threshold Breaches:

There are no breaches to the approved Acquisition Program Baseline (APB) dated September 18, 1995. There are no Wunn-McCurdy unit cost breaches.

9. Schedule:

a. Milestones --

|   | <u>Development<br/>Estimate</u> | <u>Approved<br/>Program</u> | <u>Current<br/>Estimate</u> |
|---|---------------------------------|-----------------------------|-----------------------------|

9a. Schedule (Cont'd):

| Milestones (Cont'd) --                | Development<br>Estimate | Approved<br>Program | Current<br>Estimate |
|---------------------------------------|-------------------------|---------------------|---------------------|
| Service Depot Support (Total Program) | SEP 00                  | SEP 00              | SEP 00              |

Schedule reflects the requirement to complete OPEVAL prior to conducting Milestone III.

b. Previous Change Explanations --

The June 1994 SAR revised the following dates: OT&E for Conversion from May 1995 to June 1996; Organic Support Capability (first Conversion Ship) from November 1995 to June 1996; and FOC (New Construction Ships) from January 2001 to July 2000. The revised APB dated September 18, 1995 revised the Conversion Acceptance Trials from July 1995 to February 1996.

c. Current Change Explanations --

Due to delivery date extensions for the Conversion ships, the OT&E for Conversion will change from June 1996 to September 1996 (CH-1) and the Organic Support Capability from June 1996 to September 1996 (CH-2). The anticipated execution of a maximum-priced omnibus Engineering Change Proposal (ECP) with Avondale by 2nd quarter FY96 will result in an extension to the delivery date by four months for the lead ship. Consequently, the estimated dates for New Construction Acceptance Trials will be adjusted from August 1997 to December 1997 (CH-3), the IOC (New Construction First Ship Delivery) will be adjusted from October 1997 to January 1998 (CH-4), and the OT&E for New Construction will be adjusted from April 1998 to August 1998 (CH-5).

Nominal capacities, exact square footage and range varies per conversion/new construction design. In all cases the threshold value is not breached.

b. Previous Change Explanations --

The ORD was revised for the second time on January 25, 1994 to reflect a combined time of 96 hours for Onload/Offload.

| Subtotal             | -     | -91.2  | -      | -91.2  |
| Total Changes        | -1.2  | -781.7 | -      | -782.9 |
| Current Estimate     | 38.1  | 4872.8 | -      | 4910.9 |

The Fact of Life Increases reflected in the previous SAR have been removed. It is anticipated that the amount will be decreased as a result of FY97 repricing which reflects more favorable outyear escalation indices.

b. Previous Change Explanations --

RDT&E

Economic: Change in escalation indices  
Estimating: Adjustment for current & prior inflation

Procurement

Economic: Revised escalation rates  
Quantity: Variance resulted from a decrease of 1 unit and a change in annual procurement buy profile/schedule.

Explanation of Change:

Nothing significant.

The third option for four additional shipsets of CSB was exercised on December 21, 1995. This option resulted in an increase in Price of \$37.2M which will be reported in the next SAR.

Explanation of Change:

The cumulative cost variance of -\$90.4M is almost exclusively due to cost overruns on the TAKR-295 hull. Engineering has experienced cost growth due to update of conversion drawings and other additional workscope identified during detail design and ongoing production efforts. Approximately three-fourths of the current

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

SEALIFT, December 31, 1995

15. Contract Information (Cont'd):

increase is due to the continuing production inefficiencies. The cumulative schedule variance of -\$70.6M is driven by production inefficiencies for all three ships.

|   | <u>Cost Variance</u> | <u>Schedule Variance</u> |
|---|----------------------|--------------------------|
| Previous Cumulative Variances           | \$-108.6             | \$-48.2                  |
| Cumulative Variances To Date (10/22/95) | <u>\$-131.7</u>      | <u>\$-43.3</u>           |
| Net Change                              | \$-23.1              | \$4.9                    |

Explanation of Change:

The cumulative cost variance of -\$131.7M is primarily due to cost overruns on the TAKR-296 attributed to poor production (shipboard/manufacturing) efforts. The remaining cost variance increase is attributed to the TAKR-298 and the inefficient production efforts of NNS in completing its pre-undocking efforts. The cumulative schedule variance of -\$43.3M is primarily driven by late material on both hulls and production effort running 3-4 months behind schedule.

The Contractors current estimated price of \$557.3 and the current PNEAC (\$600) exceed the ceiling price.

SEALIFT, December 31, 1995

15. Contract Information (Cont'd):

Explanation of Change:

The cumulative schedule variance of -\$14.9M is due to late drawing deliveries which are impacting production and schedule distortions resulting from changing the production starting point. Avondale has decided to begin production at the ship's mid-body and work forward in lieu of their traditional approach of starting in the machinery spaces. This approach should allow engineering disciplines more time to clean up drawings and minimize the need for rework due to engineering errors.

An option was exercised for an additional ship on December 27, 1995. The increase will be reflected in the April 1996 CPR.

Explanation of Change:

Nothing significant.

The Cost Performance Report (CPR) reflects one ship. Two additional ships were awarded in October 1994. The recent execution of an omnibus Engineering Change Proposal (ECP) (P00013) to the contract resulted in a revised Target Cost for three ships of \$666.0M and Ceiling Price of \$865.7M. These changes will be reflected in the April 16, 1996 CPR.

18. Operating and Support Costs:

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

SEALIFT, December 31, 1995

**18a. Operating and Support Costs (Cont'd):**

**a. Assumptions and Ground Rules --**

CSP-24. The CSP-24 is prepositioned with military cargo. In Prepositioning Mode, the ship will be deployed with cargo in the holds in a forward area. The cargo hold environmental control system will be used to maintain the cargo holds within the required temperature and humidity range. The ship will be maintained in Full Operating Status (FOS). The ship will participate in occasional fleet exercises. Port facilities may or may not have services such as shore power and steam. For calculating fuel consumption, the ship will not be on shore services and the summer environmental condition is assumed year round. The CSP-24 will operate 33 percent of the time underway and 67 percent of the time in port. While underway, 67 percent of the time the ship will operate at 15 knots and 33 percent of the time will operate at 24 knots.

CSS-24. The CSS-24 is maintained in Reduced Operating Status (ROS). In ROS, the CSS-24 will be maintained without cargo and can be activated within four days (ROS-4). Full crews will be kept on alert and a skeleton crew (approximately 9) will be aboard at all times. For calculating fuel consumption, the ship will be on shore services and the summer environmental condition is assumed 50 percent of the in port and underway periods and assumed to be in the winter environmental condition 50 percent of the in port and underway periods. The CSS-24 will operate 15 percent of the time underway and 85 percent of the time will be in port. While underway, 60 percent of the time will be at 15 knots and 40 percent of the time will be at 24 knots.

During a mobilization (such as, war, crisis, deployment, or redeployment), the CSP-24 and CSS-24 will operate as point-to-point ships. They will transit at maximum attainable speed from port of embarkation to port of debarkation.

SMART-T, December 31, 1995

**4. Program Elements/Procurement Line Items (Cont'd):**

\*SMART-T FY92 and FY93 R&D funds were part of Project D455, which reflected funding for the four Army Milstar programs. Starting in FY94, SMART-T is funded under Project D384.

\*\*The Joint Communications Support Element (JCSE) requirements are funded with Army and Air Force funds managed by JCSE.

\*\*\*Air Force ICN 33601F (shared) funds all Air Force Milstar terminal requirements.

**5. Related Programs:**

Milstar Space and Mission Control Segment Program; M1037 High Mobility Multi-Purpose Wheeled Vehicle (HMMWV)

**6. Mission and Description:**

This program responds to the Congressional direction to increase the tactical utility of the Milstar System. The SMART-T will provide a range extension capability to the Army's Mobile Subscriber Equipment (MSE). Specifically, it will provide a satellite interface to permit uninterrupted voice/data communication as our advancing forces move beyond the line-of-sight capability of MSE. This program will support Echelons Corps and Below (ECB) as well as special contingency operations. This equipment will communicate at both low and medium data rates. It will provide the security, mobility, and anti-jam capability required to defeat the threat and satisfy the critical need stated above. The SMART-T also will have the inherent capability of low probability of interception and low probability of detection (LPI/LPD) to avoid being targeted for destruction, jamming or eavesdropping. The prime mover will be a High Mobility Multi-Purpose Wheeled Vehicle (HMMWV) which will carry all the electronics, power generation and a self-erectable antenna. Feasibility engineering efforts will be conducted as part of the development program for Demand Assigned Multiple Access (DAMA) capability. The SMART-T program does not replace another; however, it does operationally displace the AN/TSC-85s and 93s (Ground Mobile Forces SHF terminals) at ECB. (The GMP displaced terminals will move to support Echelons Above Corps.)

**7. Program Highlights:**

**a. Significant Historical Developments --**

In the National Defense Authorization Act for FY90, Congress directed that the entire Milstar program be restructured to: substantially reduce costs; increase the utility for tactical users; and eliminate unnecessary capabilities for protracted nuclear war fighting missions and operations. This direction/guidance led to a number of actions for improving Force Projection for Command, Control, Communications, Computer and Intelligence (C4I) support to

\*\*\* UNCLASSIFIED \*\*\*

SMART-T, December 31, 1995

**7a. Program Highlights (Cont'd):**

include the need to develop and procure a new Medium Data Rate (MDR) Secure, Mobile, Anti-jam, Reliable, Tactical Terminal (SMART-T). In a letter to Congress dated 29 January 1991, the Deputy Secretary of Defense outlined to Congress the DoD's plan to restructure the Milstar program, which included acquisition plans for the SMART-T. The Army Operational Requirements Document (ORD) was finalized 10 March 1992. The Army Acquisition Executive (AAE) approved the Acquisition Strategy Report on 8 April 1992. A successful ASARC Milestone II Decision was held on 18 May 1992, allowing the program to proceed into Phase II, Engineering and Manufacturing Development (EMD). The Acquisition Decision Memorandum was signed on 22 May 1992. Subsequently on 27 October 1992, a Milstar Program Review DAB was conducted, which revalidated the ground terminal program requirements. Dual development contracts were awarded on 9 November 1992 to Raytheon Co., Marlborough, MA, and Rockwell International, Richardson, TX. Raytheon completed Hardware Critical Design Review (CDR) in Sep 93, and Software CDR in Mar 94. Rockwell completed Hardware CDR in Jan 94, and Software CDR in Mar 94.

b. Significant Developments Since Last Report --  
Medium Data Rate (MDR) communications capability and Mobile Subscriber Equipment (MSE) interoperability were successfully demonstrated as part of the MST-3000 Terminal to Brassboard Payload Interface Test, which ended on 19 Apr 95.

The SMART-T system is expected to satisfy mission requirements.

c. Changes Since As Of Date --  
On 19 Jan 96, MG Campbell, Program Executive Officer for Command, Control, and Communications Systems (PEO C3S), reviewed and approved the initiation of Low Rate Initial Production (LRIP) for the SMART-T. As required by the Army Acquisition Executive memorandum of 26 May 92, the Project Management Office (PMO) demonstrated that the program met all Exit Criteria. An installation level Overarching Integrated Product Team (OIPT) supported the review process leading to the approval, as well as assessments from both the US Army Materiel Systems Analysis Activity (AMSAA) and the US Army Operational Test and Evaluation Command (OPTEC).

Project Manager Milstar (Army) together with the Communications -Electronics Command (CECOM) awarded the SMART-T Low Rate Initial Production/Full Scale Production (LRIP/FSP) contract to Raytheon Company (Marlborough, MA) on 7 Feb 96. The LRIP/FSP contract is Firm Fixed Price (FFP) with options for a total of 387 terminals supporting all services and special users. A total of 52 terminals (43 Army) will be procured during LRIP. A successful Milestone III Decision Review will be conducted prior to exercising the first Full

9a. Schedule (Cont'd):

FAT - First Article Test  
IOT&E - Initial Operational Test and Evaluation  
FOT&E - Follow-On Test and Evaluation  
IOC - Initial Operational Capability

1/ Date when initial training and provisioning have been completed.

b. Previous Change Explanations --

The Development contracts were awarded in Nov 92 (vs Sep 92). This delay was due to the additional time required to complete source selection evaluation. The delay caused a shift in all subsequent milestones through Milestone III ASARC Review.

Critical Design Review (CDR) changed from December 1993 to March 1994. Initially, credit for having satisfied requirements for CDR and Preliminary Design Review (PDR) was to be taken when the Hardware PDR and CDR were complete. However, it was determined that program status would be more accurately reflected if credit for satisfying PDR and CDR milestones was not claimed until both the Hardware and Software reviews were complete.

c. Current Change Explanations --

(Ch-1) LRIP Decision changed from Feb 96 to Jan 96. On 19 Jan 96, MG Campbell, Program Executive Officer for Command, Control and Communications Systems (PEO C3S) approved the SMART-T program for entry into Low Rate Initial Production (LRIP).

(Ch-2) The following changes resulted from the LRIP/FSP contract award on 7 Feb 96:

a. LRIP Contract Award changed from Mar 96 to Feb 96. On 7 Feb 96, PM Milstar Army and the Communications-Electronics Command (CECOM) awarded a Low Rate Initial Production (LRIP) contract with Full Scale Production (FSP) options to Raytheon Company (Marlborough, MA).

b. First Article Test (FAT) Start/End date changed from Oct 97/Mar 98 to Sep 97/Jan 98. FAT will commence immediately upon receipt of LRIP terminals.

c. LRIP First Delivery changed from Mar 98 to Jan 98. Contractors were given the latitude to propose terminal delivery schedules.

The unit of measure for SMART-T is terminals.

At the Milestone II Decision Review on 26 May 1992, a total of 52 Army and Air Force terminals were approved by the Army Acquisition Executive for Low Rate Initial Production (LRIP). The Army LRIP quantity will satisfy training requirements and equip the Army's Contingency Corps.

c. Foreign Military Sales/International Cooperative Programs -- None.

d. Nuclear Costs -- None.

b. Previous Change Explanations --

RDT&E

Economic: Revised escalation indices.

Estimating: FY92 funds turned in (reprogramming action) due to delay in development contract award; funding reduction to accommodate Small Business Innovative Research (SBIR) allocation; FY93-95 funding reductions; funding reduction to accommodate inflation tax allocation; and FY93 unfunded Demand Assigned Multiple Access (DAMA) engineering feasibility efforts. Revised estimate for Current and Prior Inflation offset and to refine Engineering Change Proposals (ECPs). Increased requirements for Joint Staff mandated Joint

\*\*\* UNCLASSIFIED \*\*\*

SMART-T, December 31, 1995

13b. Cost Variance Analysis (Cont'd):

Interoperability Standards, Network Control and  
Payload Specification changes.

Procurement

Economic: Revised escalation indices. Adjustment for  
Negative Program Change.

Quantity: JCSE procurement increased from 8 to 10. Army  
procurement increased from 208 to 209. Air Force  
appropriation reduction in quantity from 102 to 76  
(AF requirements from 97 to 73; JCSE requirements  
from 5 to 3). Army appropriation reduction from  
219 to 217 (JCSE requirements from 5 to 3; Army  
209 unchanged; Other DOD Special Users 5  
unchanged). Marine Corps appropriation quantity  
increased from 42 to 48.

Schedule: Annual procurement buy profile changed.

Estimating: FY94-95 funding reductions; and reduction in first  
unit cost estimate. Refined Engineering Change  
Proposals (ECPs) due to decrease in funding;  
shortened system life from 20 to 15 years; and  
corrected error in Dec 92 SAR (reclassified  
elements from rollaway to support costs). Air  
Force appropriation decrease in GFE, recurring  
engineering, quality control and ECP costs. Marine  
Corps appropriation decrease in GFE, contractor  
system project management, quality control and ECP  
costs. Marine Corps appropriation increase in  
recurring engineering due to quantity increase.  
Increased Army GFE costs related to the HMMWV and  
additional Milstar Intersegment Tests.

Support: Revised initial spares and other weapon system  
costs. Reduced data costs. Decreased initial  
spares requirements based on quantity reduction.  
Additional decrease in estimated data costs.

Explanation of Change:

Contractor Estimated Price at Completion: Development contract is complete. Project Management Office (PMO) is currently negotiating final contract close-out costs.

This will be the last time this contract will appear in the SAR. The contract is greater than 90% complete.

Contract performance data has been omitted. This information is procurement sensitive due to the competitive nature of the acquisition strategy (i.e., dual development contractors to compete for LRIP/Production contract).

16c. Program Funding Summary (Cont'd):

Expenditures and obligations reflect Program Office records as of 31 December 1995

The 2035 appropriation for the U.S. Army reflects a total procurement buy of 209 terminals. When compared to the 31 Dec 94 SAR total of 217, the decrease in terminals is attributable to the transfer of JCSE (3) and Other DOD Special Users (5) to the appropriation category 0300 Procurement, Defense Agencies.

The combined approved U.S. Army and U. S. Air Force Low Rate Initial Production quantity is 52 terminals.

Appropriation: 1109 Procurement, Marine Corps

|        |    |     |      |      |      |  |     |
|--------|----|-----|------|------|------|--|-----|
| 1999   | 24 | 3.5 | 22.4 | 32.8 | 39.5 |  | 2.3 |
| 2000   | 18 | 1.8 | 15.2 | 21.6 | 26.6 |  | 2.2 |
| 2001   | 6  | 0.6 | 4.7  | 6.8  | 8.5  |  | 2.2 |
| 2002   |    | 0.1 |      | 0.2  | 0.3  |  | 2.2 |
| 2003   |    | 0.1 |      | 0.2  | 0.2  |  | 2.2 |
| 2004   |    | 0.1 |      | 0.1  | 0.1  |  | 2.2 |
| Subtot | 48 | 6.2 | 42.3 | 61.7 | 75.2 |  |     |
| Navy   | 48 | 6.2 | 42.3 | 61.7 | 75.2 |  |     |

The 1109 appropriation funds the U.S. Marine Corps requirements (48).

Appropriation: 3080 Other Procurement, Air Force

|      |    |     |      |      |      |  |     |
|------|----|-----|------|------|------|--|-----|
| 1997 | 9  | 1.7 | 9.4  | 13.5 | 15.6 |  | 2.2 |

The 0300 appropriation funds the requirements for U.S. Navy Special Forces (4).

17. Production Rate Data:

a. Deliveries to Date -- 0/0.

b. Approved Design-to-Cost Objective -- N/A.

18. Operating and Support Costs:

a. Assumptions and Ground Rules --

Based on the SMART-T Program Life Cycle Cost Estimate (PLCCE) dated January 1994, the following assumptions were determined: The conditions under which the SMART-T maintenance costs are calculated include using the annual operating hours per terminal of 2080 hours based on an 8 hour a day 5 day week per operation. Each terminal will require 60 man hours/year of DS/GS maintenance, and 120 man

JSIPS, December 31, 1995

5. Related Programs:

Tactical Imagery Processing System (commercial utility cargo vehicle); (TIPSC) A unit level Imagery Ground System supporting Navy ATARS testing and development of the USMC Tactical Exploitation Ground (TEG) System. Eagle Vision; Commercial Satellite Imagery Ground Station. Tactical Exploitation Group (TEG); Mobile forward deployed ATARS Electro-Optical/Infra-red (EO/IR) imagery receipt system.

6. Mission and Description:

JSIPS' mission is to provide imagery-derived, time-sensitive, battle management information to the field commanders in near-real-time. JSIPS is the DOD common mobile ground station for processing and exploiting imagery received from a variety of sources. The system employs the following seven functional segments: National Input Segment (NIS), Tactical Input Segment (TIS), Softcopy Exploitation Support Segment (SES), Hardcopy Exploitation Segment (HES), Exploitation Support Segment (ESS), Communication Support Segment (CSS), and System Support Segment (SSS). The SES, ESS and CSS are "Core" segments required for basic system operation. The system, however, is modular in design so that the services (USAF, USMC, USA, and USN) can select the input and processing segments that they require based upon their mission. The Navy elected to use a Tactical Input Segment derivative, called the Navy TIS (N-TIS), to process ATARS imagery from the F/A-18. Other existing shipboard assets (i.e. Digital Imagery Workstation-afloat) were used to satisfy the overall Navy JSIPS requirements.

7. Program Highlights:

a. Significant Historical Developments --  
Office of the Secretary of Defense (OSD) instituted the Joint Service Imagery Processing System (JSIPS) program in 1986 to consolidate separate Army, Air Force, and Marine Corps imagery programs. Representatives of the three services signed a memorandum of agreement in January 1987. A Joint Service Operational Requirements Document (JSORD) was signed December 1990. JSIPS was designated as an ACAT 1C program in July 1992. JSIPS was transferred to the Program Executive Officer for C3 programs in July 1992 and became part of the Follow-On Tactical Reconnaissance System (FOTRS) in December 1992.

The Army system was deployed to Mains-Finthen, Germany (October 1990). The system was approved for softcopy exploitation operations in October 1991. Approval for Tactical Radar Correlator (TRAC), ELINT Processing Distribution System (EPDS), and Hardcopy Exploitation Segment (HES) operations was granted in October 1992. On 11 February 1993, the Defense Intelligence Agency granted full approval to operate all JSIPS functions on the Army system deployed at Mains-Finthen, Germany. Final acceptance and delivery of the

\*\*\* UNCLASSIFIED \*\*\*

JSIPS, December 31, 1995

7a. Program Highlights (Cont'd):

first Army Joint Service Imagery Processing System was accomplished on 1 April 1993. In December 1993, The Army Assistant Secretary for Research, Development and Acquisition officially requested Under Secretary of Defense for Acquisition and Technology (USDA&T) to support termination of the Army participation in JSIPS. A Red Team was established by the Defense Airborne Reconnaissance Office (DARO) to study the problem. The DARO conducted a "Red Team" review to respond to the Army's request to withdraw from the program and to evaluate the (JSIPS) Program Office (JPO's) plan to restructure the program to improve system affordability. The DARO, in coordination with the Joint Requirement Oversight Committee (JROC), developed a plan to migrate the Service's imagery systems to a Common Imagery Ground/Surface System (CIGSS) architecture. The DARO plan was concurred by both the JROC and Defense Airborne Reconnaissance Steering Committee (DARSC) on 1 and 3 November 94. The DARO direction calls for delivering systems in the pipeline, migrating current systems to a common baseline, transitioning JSIPS into the CIGSS and using streamlined acquisition procedures. As a part of this plan the JROC concurred with the Army's request to use the Modernized Imagery Exploitation System (MIES), in lieu of JSIPS. They also accepted a modified USMC Operation Concept which included a single (vice three) JSIPS as a centralized hub for exploitation and dissemination of National Imagery Intelligence Products supported by three Tactical Exploitation Group (TEGs) that provide a tactical capability. The Army elected to defield their JSIPS system in September 94 transferring imagery intelligence production responsibility to the MIES. Some system components (National Input Segment, Satellite Communications, Hardcopy Exploitation Segment, etc.) were retained by the Army. The remainder of the system components (Support Processor Group and Communications Processor Group) were returned to the JSIPS contractor's facility for refurbishment and enhancement to meet 12th AF requirements.

The Marine Corp system was deployed to Eglin AFB Fort Walton Beach, FL in July of 1992 for developmental testing. A successful Advanced Tactical Airborne Reconnaissance System (ATARS) Data Link flight test was conducted in September of 1992. Due to the 25 June 1993 cancellation of the Air Force Advanced Tactical Air Reconnaissance System contract, the Engineering and Manufacturing Development (EMD) strategy was changed to de-couple the National and Tactical portions of the Air Force/Marine Corps system to allow early National system acceptance. The Marine Corps system was moved from Eglin AFB, FL to Camp Pendleton Oceanside, CA during February 1994. The Defense Intelligence Agency (DIA) conducted Security Accreditation testing and granted permission for the system to conduct live operations. The DD-250 was signed during Nov 94 and the system was turned over to the Marine Corps Imagery Support Unit (MCISU).

\*\*\* UNCLASSIFIED \*\*\*

JSIPS, December 31, 1995

7a. Program Highlights (Cont'd):

On 19 February 1993, the Air Force System Acquisition Review Council (AFSARC) authorized the beginning of Low Rate Initial Production (LRIP) to buy the first Air Force production JSIPS. The Air Force Low Rate Initial Production (LRIP) for the JSIPS was awarded on 23 Sep 93. This program proceeded on schedule during 1994. The system is scheduled for activation at the 9th AF Shaw AFB Sumter, SC, May 96.

Efforts started in 1994 to modify the LRIP contract for refurbishment of both the original Army system and Marine Corps system. Both systems will be upgraded to the current 9th AF System configuration. The original Army system will be deployed to the 12th AF Davis-Monthan Tucson, AZ and the Marine Corps system will be upgraded on-site at Camp Pendleton, CA.

The Navy Tactical Input Segment (NTIS) was awarded on 23 Sep 93. System fabrication began in April 94 and was ready for system integration and checkout in November 1994. The System was delivered to the Naval Surface Warfare Center (NSWC) at Dahlgren, Virginia, in March of 1995 for integration and testing with the other Navy JSIPS System components.

A Tactical Exploitation Group (TEG) was identified to satisfy tactical imagery exploitation requirements for the USMC. Three commercial off-the-shelf (COTS) based TEGs will be procured. An Acquisition Strategy was developed during 1994 to obtain an initial prototype system utilizing Navy Air Warfare Center (NAWC) resources at Point Mugu, CA. A separate contract is planned for FY96 for two additional TEGs meeting Common Imagery Ground Surface System (CIGSS) architecture requirements.

The JSIPS prime contractor submitted a series of Claims/Requests for Equitable Adjustment (REAs) totaling \$65.7M at price. An Integrated Product Team (IPT) was established in 1994 to evaluate and negotiate the Claims/REAs with the Contractor.

In July 94 Assistant Secretary of the Air Force (Acquisition) (SAF/AQ) transferred the Designated Acquisition Commander (DAC) responsibility from Aeronautical Systems Center (ASC) to Electronic Systems Center (ESC). On 15 July 1994 ESC/ICI was designated as the Product Group Manager for Reconnaissance/Intelligence Ground Systems. This established a single face to the user within Air Force Materiel Command (AFMC) responsible for the development, procurement and sustainment of all Air Force Recce/Intel Ground Systems.

\*\*\* UNCLASSIFIED \*\*\*

JSIPS, December 31, 1995

7b. Program Highlights (Cont'd):

b. Significant Developments Since Last Report --

The Marine Corps Joint Services Imagery Processing System (JSIPS) at Camp Pendleton, Oceanside, CA. was fully integrated with other on-site intelligence systems. Automatic Digital Network (AUTODIN) connectivity and a Defense Satellite Network Sensitive Compartmented Information (DSNET3) interface were established. A formal fielding decision was made by Major General Mutter, Commander Marine Corps Systems Command (COMMARCORSSYSCOM) on September 22, 1995. The JSIPS supported a number of exercises in 1995 including "Kernel Blitz" and "Fort Franklin III".

Fabrication of the 9th Air Force Low Rate Initial Production (LRIP) system is continuing on schedule for delivery to Shaw AFB Sumter, SC. in mid Calendar Year 1996. The National Input Segment (NIS) was delivered and interfaced with the system. Integration of the Softcopy Processor Group (SPG) and Communications Processor Group (CPG) are largely complete and in-plant test activities are proceeding successfully. Personnel from the program office, Headquarters Air Combat Command (HQ/ACC) and 9th AF have participated in a number of site activation working groups in anticipation of fielding the system. A Block upgrade was negotiated in Dec 95 to provide for migration to the Common Imagery Ground Surface Systems (CIGSS) standards and to incorporate National Requests for Changes (RFC's).

A contract modification was accomplished during Sep 95 to provide for the upgrading of both the 12th AF and Marine Corps systems to the 9th AF production baseline.

The Navy Tactical Input Segment (NTIS) engineering development model completed system development and testing and was delivered to the Navy at Naval Surface Weapons Center, Dahlgren, VA in April 95. The system was interfaced with the Digital Imagery Workstation Afloat (DIWSA), another major Navy JSIPS component, and imagery was successfully transferred. On site acceptance testing was also completed and the system will be formally accepted in early Calendar Year (CY) 96. A preliminary NTIS production acquisition strategy was developed in concert with the Navy.

In January 1995 a contract was awarded through the Naval Air Warfare Center (NAWC) for the development of a Tactical Exploitation Group (TEG) prototype. A System Requirements Review and a Design Review were accomplished and the program is on track for a mid Calendar Year (CY) 96 system delivery to the Marine Corps. Also, work has begun on prototyping a downsized common data link for inclusion on the three TEGs.

\*\*\* UNCLASSIFIED \*\*\*

JSIPS, December 31, 1995

**7b. Program Highlights (Cont'd):**

The Claims/Requests for Equitable Adjustment Integrated Product Team (IPT) established in 1994 settled two of the six claims. Three claims with a value of \$6.8M at price were appealed to the Armed Service Board of Contract Appeals (ASBCA) in May 1995. In November 1995 the Contracting Officer issued a Final Determination on the remaining claim, with a value of \$58.7M at price. The Government and the contractor have placed all four remaining claims in abeyance and agreed to pursue an Alternative Disputes Resolution (ADR) approach for 90 days. The objective of the ADR is to jointly establish a program baseline from which a final settlement can be negotiated.

The Recce/Intel Ground Systems (R/IGS) Product Group, has been involved in many related program activities. The Distributed Common Ground Station (DCGS) concept for the Air Force, combines the Contingency Airborne Reconnaissance System (CARS) and JSIPS systems into an interoperable set of modular, tactical, and deployable segments. The DCGS will provide a standardized common ground station for multi-source intelligence processing, exploitation and dissemination to support combat plans, basing concepts, and the Air Operations Center. A Ground Exploitation System (GES) was integrated to support the Air National Guard's exploitation of imagery acquired from an F-16 reconnaissance pod. The Defense Airborne Reconnaissance Office (DARO) selected Electronic Systems Center (ESC) to integrate a Common Imagery Ground/Surface System (CIGSS) testbed to ensure intelligence system interoperability and compliance with CIGSS standards. DARO also tasked ESC to serve as the executive agent for the acquisition and sustainment of the Common Imagery Processor (CIP), a major Common Imagery Ground/Surface System (CIGSS) component. This effort is being accomplished jointly with the Army. Prototype development will be accomplished by the Army Space Program Office (ASPO) on behalf of the RIGS Product Group Manager.

The program is expected to satisfy all mission requirements.

**c. Changes Since As Of Date --**

The Navy Tactical Input Segment (NTIS) DD-250 for the Engineering and Manufacturing Development Contract was signed on 6 March 1996.

**8. Threshold Breaches:**

There are no breaches to the Acquisition Program Baseline (APB) dated January 31, 1995. There is no Munn-McCurdy unit cost breach.

b. Previous Change Explanations --

The Army System Production originally scheduled for Jan 94 was TBD pending a decision on their formal request to withdraw from the joint program. Milestones for USMC LRIP approval and Navy LRIP approval were added to current estimates as of Jun 94 and Oct 95. USMC Full rate decision had slipped from Aug 94 to Aug 95 due to the addition of the USMC LRIP approval. USAF LRIP System delivery had slipped from Oct 95 to Apr 96 due to the USAF LRIP contract not being awarded until Sep 93. Navy Subsystem Production had slipped from Jan 96 to Sep 97 due to the addition of a Navy LRIP approval milestone.

Milestone I,II,EMD Contract Award,CDR Complete,Service Final DT&E(Start) USMC LRIP Approval,IOC and USAF Full Rate Decision were all added to coincide with our proposed baseline.

Due to lengthy negotiations, the LRIP contract award slipped from Aug 93 to Sep 93.

The Army System Production Decision and the USMC LRIP Approval have been deleted because of the restructure of the JSIPS program.

The Tactical requirement for these systems was deferred thereby accelerating the National development schedule for both DT&E and IOC.

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

JSIPS, December 31, 1995

9b. Schedule (Cont'd):

JSIPS

The Navy subsystem milestone has been moved to the Navy TIS Section and renamed Navy TIS Milestone III. The date changed from Sep 97 to Jan 98 to allow time to evaluate the initial system.

USAF LRIP (9th AF) Delivery has been added to reflect the restructure of the JSIPS program.

b. Previous Change Explanations --

The Navy TIS LRIP decision changed from Oct 95 to Feb 96 to reflect the current date for the DARO restructure.

c. Current Change Explanations --

(Ch-1) The Navy Tactical Input Segment (NTIS) RMD unit DD-250 was signed on March 6, 1996.

(Ch-2) Plans for the Navy Tactical Input Segment (NTIS) are being revised to better support initial operational capability (IOC). The current dates may be revised based upon restructure of the program

b. Previous Change Explanations --

"Imagery Receipt" has been replaced with "Multiple Sensor Inputs".

Additional performance parameters have been added to conform with our proposed baseline. The parameters identified have been listed as key parameters in the draft JORD as signed out under cover of HQ ACC/DR, 27 Jan 94.

b. Previous Change Explanations --

EDT&E

Economic: Revised economic escalation indices.

Economic Adjustment for Negative Program Change.

Estimating: Adjustment for Current and Prior Inflation.

Congressional transfer of JSIPS program funds to  
Defense Airborne Reconnaissance Office (DARO).

Congressional transfer of JSIPS Program funds from  
services to DARO.

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

JSIPS, December 31, 1995

13b. Cost Variance Analysis (Cont'd):  
JSIPS

Army reduction of program funds in preparation to withdraw from JSIPS and to cancel its second EDM unit.

Cancellation of Level III drawings for LRIP contract, cancellation of CMU payback; and reduced SPO Support due to congressional reduction to FY94 funds.

Reduction due to Air Force reprogramming for other higher priorities. (Payback to the Cheyenne Mountain Upgrade Program) and reduced SPO Support.

Reduction due to Army reprogramming for other higher priorities. Modified Imagery Exploitation System (MIES) and reduced SPO Support.

Air Force realignment of funds to JSIPS due to AF termination of ATARS program.

Refinement of cost estimate based on DARO restructure of program.

Procurement

Economic: Revised economic escalation indices.

Quantity: Economic adjustment for negative program change.  
Total Variance associated with decrease of 1 unit.

Estimating: Quantity reduction of 1 USAF JSIPS.  
Reduction of nonrecurring Flyaway costs associated with decrease of one Army unit.

Adjustment for Current & Prior Inflation.

Approved reprogramming of FY93 Air Force funds to JSIPS to cover additional costs of LRIP contract.

Cannot fund Reliability Verification Testing, Tech Orders, training and continent liabilities for the LRIP contract due to funding cuts in FY94.

Increased Flyaway costs due to transfer of costs erroneously classified and previously counted as support costs.

Costs associated with the refurbishment, refueling

13b. Cost Variance Analysis (Cont'd):  
JSIPS

and planned block upgrades.

Additional estimating changes for the elimination of GFE. (Associated with the reduction of 1 USAF unit).

Support: Re-alignment of Estimating Costs based upon restructure of program.  
Initial Spares associated with decrease of one Army unit.

Peculiar Support Equipment associated with decrease of one Army unit.

Other Weapons Systems costs associated with decrease of one Army unit.

Reduction of Peculiar Support Equipment and Other Weapons Systems costs which should have been counted as Flyaway costs.

Reduction of Peculiar Support and Other Weapons Systems cost due to Navy reduction of funds in FY00.

Reduced numbers of Initial Spares due to increased use of Commercial Off-the-Shelf equipment and Congressional funding reductions in the out years.

Reduction of support costs associated with the reduction of 1 AF unit.

Re-alignment of Support costs based on restructure of program.

Explanation of Change:

The last CPR was received as of August 1995. In October 1995 it was decided to drop cost reporting on this contract. Further CPM reporting would not add any significant program benefit or managerial insight based upon the fact that all major milestones have been achieved and no technical development remains. This is the last time we will report cost data in the SAR on this program. The Electronic Systems Center (ESC) Field Command Vocal Point (FCVP) has coordinated and concurred on this action.

The total contract value of \$206.9M ,at ceiling, includes all contract type CLINS including FPI,FFP,CPFF and T&M.

| Net Change                              | \$-0.9        | \$0.9             |

Explanation of Change:

In late 1994 a schedule variance developed that was of concern to the program office. The Government working with the contractor developed a mitigation plan that was successfully implemented during 1995. This mitigation plan successfully reduced schedule and technical risk without any negative impact on overall performance. This plan also allowed the contractor to successfully develop and integrate the Communications Processor Group (CPG) and Softcopy Processor Group (SPG) with minimal impact to the overall program. Cost and schedule data is as of December 31, 1995. Under the current mitigation plan the schedule variance of -\$2.1M will be eliminated and the cost variance of -\$1.6M has been absorbed by the contractor's management reserve. The contractor is expected to deliver the Low Rate Initial Production (LRIP) system to Shaw AFB SC on time and slightly above target cost.

The increase in the Target Price and Estimate at Completion is the result of a modification that was added for the refurbishment of both the 12th AF and the Marine Corps system in September 1995. Both systems are being upgraded to the current 9th AF system baseline.

18. Operating and Support Costs:

JSIPS

a. Assumptions and Ground Rules --

The O&S cost estimate was completed in October 1993 and updated in September 1994. Reliability and Maintainability (R&M) are primary JSIPS design parameters. To achieve our high R&M objectives, the maintenance concept is focused on modularity and inherent fault isolation capabilities through Built-in-Test (BIT) and Built-in-Test-Equipment (BITE) features. A three level maintenance concept is planned with the bulk of system maintenance being accomplished at the organization and depot levels. The operating tempo for the system is different for each service. USAF is 21 hours a day, 365 days per year and the USMC is 8 hours per day, 5 days per week. The personnel cost is a summary cost of pay and allowances for officer, enlisted, and civilian personnel required to operate, maintain, and support the system. The consumption cost is a summary cost of fuel and energy resources: operations, maintenance and support materials consumed at the unit level; stock fund reimbursements for depot-level repairables; transportation in support of system operation and maintenance, temporary additional duty/temporary duty, and other unit-level consumption costs, such as purchased services for equipment lease and service contracts. The depot maintenance cost is a summary cost of labor, material, and overhead incurred in performing major overhauls or maintenance on the system, its components, and associated support equipment at centralized repair depots, contractor repair facilities, or on site by depot teams. The Contractor support cost is a summary of contractor labor, materials, and overhead incurred in providing all or part of the logistics support required by the system. The

sustaining support cost is a summary cost of replacement support equipment, modification kits, sustaining engineering, and software maintenance support. The indirect support cost is a summary of personnel support for specialty training, permanent changes of station and medical care. There is no antecedent program.

Built-in-Test-Equipment (BITE) features. A three level maintenance concept is planned with the bulk of system maintenance being accomplished at the organization and depot levels. The operating tempo for the USN is 8 hours per day for 335 days and 30 days at 24 hours per day. The personnel cost is a summary of pay and allowances for officer, enlisted, and civilian personnel required to operate, maintain, and support the system. The consumption cost is a summary cost of fuel and energy resources: operations, maintenance and support materials consumed at the unit level; stock fund reimbursements for depot-level repairables; transportation in support of system operation and maintenance, temporary additional duty/temporary duty, and other unit-level consumption costs, such as purchased services for equipment lease and service contracts. The depot maintenance cost is a summary of labor, material, and overhead incurred in performing major overhauls or maintenance on the system, its components, and associated support equipment at centralized repair depots, contractor repair facilities, or on site by depot teams. The Contractor support cost is a summary of contractor labor, materials, and overhead incurred in providing all or part of the logistics support required by the system. The sustaining support cost is a summary cost of replacement support equipment, modification kits, sustaining engineering, and software maintenance support. The indirect support cost is a summary of personnel support for specialty training, permanent changes of station and medical care. There is no antecedent program.

5. (U) Related Programs:

Tank Main Armament Systems (TMAS); Combat Vehicle Improvement Program; PM, Armored Systems Integration (ASI); PM, 2nd Generation Forward Looking Infra-Red (FLIR).

6. (U) Mission and Description:

The mission of the M1A2 Abrams tank is to close with and destroy enemy forces on the integrated battlefield using firepower, maneuver, and shock effect. The M1A2 has completed low rate production and production continues on the M1A2 Upgrade Program. Selected M1 tanks are being overhauled and replaced with M1A2 tanks in order to make them more survivable, fightable, and lethal. Improvements include the combat proven M1A1 features [the 120mm main gun; Nuclear, Biological, and Chemical (NBC) protection; and heavy armor] and the new enhancements linked by the digital distributed data and power architecture of the M1A2. The Inter-vehicular Information System (IVIS) and Position Navigation (POS/NAV) equipment provide improved battlefield command, control, and communications over the M1A1. The new Commander's Independent Thermal Viewer (CITV) also speeds up the target acquisition process so that the gunner may engage more targets in a shorter time interval. The M1A2 Abrams tank replaces the M1A1 tank in the CONUS Contingency Force.

7. (U) Program Highlights:

a. (U) Significant Historical Developments --

The M1A2 Abrams tank program is the successor to the M1 and M1A1 tank acquisition programs. Ten M1A2 prototypes were delivered to Army test sites in 1991. An Early User Test & Evaluation (EUT&E), using five of these prototypes, was conducted from June through December

ABRAMS Upgrade, December 31, 1995

7a. (U) Program Highlights (Cont'd):

1991. The other prototypes were used to assess ballistic and nuclear vulnerability, system reliability, and logistic supportability. The first of five M1A2 pilot production vehicles was delivered in March 1992. Based on the results of a special ASARC held on March 21, 1992, the Army Acquisition Executive (AAE) decided to proceed with low rate initial production (LRIP) of 62 M1A2 tanks. The Congress then directed the Defense Department to proceed with a program to upgrade the M1 tank to the M1A2 configuration. An Acquisition Decision Memorandum (ADM), signed on December 18, 1992 by the Deputy to the USD(A), approved the Army's first Acquisition Program Baseline for the Abrams Upgrade Program. M1A2 Live Fire Testing, New Equipment Training, the Initial Operational Test and Evaluation (IOT&E), and the Production Qualification Test (PQT) were completed during 1993 and 1994. The last of the 62 low rate initial production M1A2 tanks was delivered in March 1994. The M1A2 Milestone III Army System Acquisition Review Council (ASARC) was held on April 8, 1994. The resultant Acquisition Decision Memorandum (ADM), approving the M1A2 for full scale production and deployment, was signed by the Army Acquisition Executive (AAE) on April 20, 1994. The M1A2 underwent its Initial Operational Test & Evaluation (IOT&E) during the period from September to December 1993. The Army Operational Test and Evaluation Command (OPT&E) and the Operational Evaluation Command's independent evaluator found the vehicle to be operationally suitable and operationally effective; however, the Director, Operational Test and Evaluation (DOT&E) evaluation of the operational testing found that the vehicle was operationally effective but not operationally suitable and there were several safety shortcomings. A program to correct the deficiencies discovered in both technical and operational testing is ongoing. The first production M1A2 upgraded from the M1 configuration was delivered in October 1994. As of December 31, 1994, total M1A2 production was 74 units.

b. (U) Significant Developments Since Last Report --

The new Acquisition Program Baseline reflecting the Milestone III ASARC decision was approved by the Army Acquisition Executive on January 15, 1995. The Defense Acquisition Executive re-certified the Abrams Upgrade Program on May 7, 1995. A contract for the System Enhancement Program (SEP) (battlefield digitization) development and 2nd Generation Forward Looking Infra-Red (FLIR) integration was awarded on August 18, 1995. The M1A2 Follow-On Production Test (FPT) on the low rate production vehicles continued throughout all of 1995 at Aberdeen Proving Ground (APG). The Follow-On Test and Evaluation (FOTE) began in September 1995 at the Ft. Hood, Texas training/field exercises. FOTE was suspended in October 1995 due to uncommanded gun/turret motion. Intensive technical effort resulted in hardware and software modifications to the M1A2. FOTE will be rerun in the summer of 1996. Both FPT and FOTE are being used to validate

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

ABRAMS Upgrade, December 31, 1995

7b. (U) Program Highlights (Cont'd):

corrections to the previously mentioned DOT&E issues. The First Unit Equipped (FUE) milestone was reached on October 21, 1995. There were 110 M1A2 tanks produced for the U.S. Army in 1995, bringing total M1A2 U.S. production up to 184 units as of December 31, 1995.

The M1A2 tank is expected to satisfy the mission requirement.

c. (U) Changes Since As Of Date -- None.

8. (U) Threshold Breaches:

There are no breaches to the AAE approved Acquisition Program Baseline, dated January 15, 1995. There are no Munn-McCurdy Unit Cost breaches.

ABRAMS Upgrade, December 31, 1995

10a. (U) Performance Characteristics (Cont'd):

Production Testing (FPT) at the Aberdeen Proving Ground (APG). The completion of the validation effort at APG will be in June 1996, however, live round check fire has already given outstanding performance. The final test report for the FPT is due in September 1996.

b. (U) Previous Change Explanations --

The Current Estimate for Combat Weight was adjusted to reflect the December 1992 production weight. Four other performance values (for Range, Speed, Combat Mission Reliability, and Maintenance Ratio) changed because of degradation due to weight. The revised estimates are the same as the M1A1 objectives which were originally established for a vehicle weighing 63.0 tons (about 8.3% less than the current weight). The Fightability Current Estimate changed to reflect the design specification required of the tank Commander's unity periscope. The Location Determination and Heading Error Current Estimates changed to account for the varying topographical and climatic conditions affecting vehicle traction in the field as opposed to ideal test conditions. Testability Performance Characteristics Current Estimates changed to conform to the contract specifications. The Targets Acquired/Unit Time Current Estimate changed to reflect the anticipated system exchange ratio enhancement over the M1A1 when using the new tank's Commander's Independent Thermal Viewer (CITV) in a "hunter-killer" system operational mode. The Current Estimates for five 1st Round Hit Probabilities changed to conform to the results achieved by the M1A1 during its Initial Production Test (IPT).

c. (U) Current Change Explanations -- None.

Explanation of Change:

Schedule variance, based on Cost Performance Report (CPR) data now being evaluated by PM Abrams, is indicative of approximately a 6 week slip in completion of the SEP/FLIR ECP. Cut-in to production is still planned for 3Q99 and fielding is scheduled for 3Q00. The cost and schedule variances were primarily caused by late award of subcontracts, late delivery of government furnished

Explanation of Change: None.

This contract provides for Long Lead Material (LLM) funding for phase II year one of the M1A2 Upgrade Program (100 tanks in FY96). The bill of materials is divided into a firm fixed price (FFP) portion and a reimbursable portion. It is expected that this contract will be rolled up into a FFP multiyear procurement letter contract in April 1996 and definitized in July 1996. Because this contract will be incorporated into an FFP contract, cost and schedule variances information is not required.

b. (U) Approved Design-to-Cost Objective -- N/A.

18. (U) Operating and Support Costs:

a. (U) Assumptions and Ground Rules --

The O&S costs shown below are derived from the Program Office Estimate (POE) for the M1A2 Upgrade program, dated January 25, 1994. A conversion quantity of 998 tanks was used in this study. The total O&S cost projected in the study is based on a mix of M1s, M1A1s, and M1A2s operating for 20 years in active units, reserve units, and in the training base. Tanks in the active units are assumed to be driven for 800 miles per year,

**5. Related Programs (Cont'd):**

System (JTIDS), Common Hardware/Software (CHS), Standard Integrated Command Post System (SICPS), High-to-Medium Air Defense Command and Control (HIMAD C2), Single Channel Ground and Air Radio System (SINCGARS), Light and Special Divisions Interim Sensor (LSDIS), Global Positioning System (GPS), and Airborne Warning and Control System (AWACS).

**6. Mission and Description:**

As the air defense node of the Army Tactical Command and Control System (ATCCS), the Forward Area Air Defense Command, Control, and Intelligence (FAAD C2I) System provides critical forward area air defense information to support the command and control decision process at various levels of command. The FAAD C2I System ties weapons together by a C2I network and integrates the Forward Area Air Defense System (FAADS) into the Army Battle Command System (ABCS) architecture. The C2I initiative incorporates a family of sensors and identification equipment (ground and aerial, active and passive) with automated data processing distribution capability. The missions will be accomplished through collection, digital processing and dissemination of target information, air threat warning, and command and control information. The FAAD C2I System will also provide target data processing and display capabilities at the Air Battle Management Operations Center (ABMOC), the Army Airspace Command and Control (A2C2) element, Sensor/Command and Control (C2) node, Battery (BTRY), Platoon/Section (PLT/SEC), and Fire Unit (FU) communications, and command, control and intelligence (C2I) architecture to counter the entire spectrum of the air threat to the divisional forward area through the 90s. The acquisition strategy relies heavily on non-developmental items (NDI) and evolutionary software development to rapidly overcome our current air defense command, control, and intelligence deficiencies and to keep pace with the advancing technologies.

The FAAD C2I Block I provides an early air defense command and control capability for light and special divisions. The FAAD C2 System will perform the overall FAAD C2I mission via the development of unique engagement operations software and the integration of: (1) ATCCS Common Hardware/Software (CHS) processors, displays and associated peripherals; (2) Army Data Distribution system (ADDS) JTIDS; (3) combat net radios Single Channel Ground and Air Radio System (SINCGARS); (4) LSDIS; (5) Airborne Warning and Control System (AWACS); (6) FAAD weapon systems; and (7) High Frequency Radios (Voice).

The FAAD C2I Block II provides an air defense command and control capability for heavy divisions. The FAAD C2 System will perform the overall FAAD C2I mission via the development of unique engagement

\*\*\* UNCLASSIFIED \*\*\*

FAAD C2I, December 31, 1995

**6. Mission and Description (Cont'd):**

operations software and the integration of: (1) ATCCS Common Hardware/Software (CHS) processors, displays and associated peripherals; (2) ADDS EPLRS/JTIDS; (3) combat net radios (SINGARS); (4) Ground Based Sensor (GBS); (5) Airborne Warning and Control System (AWACS); (6) FAAD weapon systems; (7) combined arms interface; and (8) HIMAD interface.

The FAAD C2I Block III provides the objective air defense command and control capability for all active and selective reserve component air defense units. The FAAD C2 System will perform the overall FAAD C2I mission via the development of unique engagement operations (EO) software, force operations (FO) software, air battle management, system hardware/software enhancements, and the integration of: (1) ATCCS CHS processors, displays and associated peripherals; (2) Army Data Distribution System (EPLRS/JTIDS); (3) combat net radios (SINGARS); (4) Ground Based Sensor (GBS); (5) AWACS; (6) FAAD weapon systems.

Block IV provides horizontal and vertical (EO and FO) pre-planned product improvements (P3I) to existing Block III capabilities. Command and control on the move, commensurate with the supported force is planned for the Battalion Command Post, A2C2 and Battery Command Post through the utilization of improved CHS. Increased capabilities for the horizontal (Army and Joint) interoperability are planned by interfacing the air defense mission planner with other existing battlefield mission planners (i.e., Aviation, Intelligence, Marine Corps). Increased capabilities to access intelligence data includes: incorporating interfaces to the Joint Intelligence Net (Commander's Tactical Terminal-Hybrid (CTTH)), establishing data links to the Air Force (AWACS JSTARS), and enhanced A2C2 interoperability. FAAD C2I incorporates the capability to automatically receive, process, and display elements of the (Airspace Control Order) ACO as issued by the Air Force.

**7. Program Highlights:**

**a. Significant Historical Developments --**

The Short Range Air Defense Command and Control (SHORAD C2) system was presented to the Army Systems Acquisition Review Council (ASARC) Milestone Decision Review (MDR) II on March 26, 1985. On September 3, 1985, the ASARC program was approved by the Vice Chief of Staff of the Army (VCSA). On January 3 and 4, 1986, an ASARC-level review directed that SHORAD C2 become a subsystem of the FAAD System and that SHORAD C2 be redesignated Forward Area Air Defense Command, Control and Intelligence (FAAD C2) System. On July 29, 1986, the Joint Requirements and Management Board (JRMB), a forerunner of the Defense Acquisition Board (DAB), approved the concept for execution of the overall FAAD program as a system of systems and approved the

\*\*\* UNCLASSIFIED \*\*\*

FAAD C2I, December 31, 1995

7a. Program Highlights (Cont'd):

following segments of FAAD C2I:

(1) Full scale development (beginning with a Build I demonstration) of the FAAD C2I objective software.

(2) A ground based sensor (GBS) Non Development Item (NDI) acquisition strategy to procure four test articles to support other FAAD developmental and operational testing, and 13 Low Rate Initial Production (LRIP) units to be used for operational test and evaluation, production verification, and initial training.

A March 1989 Secretary of Defense Decision Memorandum (SDDM) approved the restructure of the FAAD C2 program to field an initial capability to perform air defense engagements and essential force control interfaces within the divisions followed by development/fielding of the objective system. The May 1990 Army Acquisition Executive Acquisition Decision Memorandum approved development of a tailored FAAD C2I for early fielding to light and special divisions followed by development of the objective system to be fielded to all Army division. Sensors, communications equipment and identification devices will be incorporated in FAAD C2I as they become available.

Following successful completion of FAAD C2 Block I software/hardware technical, developmental and operational (Limited User Test) testing in February 1993, an In-Process Review was conducted at Fort Monmouth, NJ in May 1993. Authority was then granted to proceed into Low Rate Initial Production (LRIP) to procure Block I software and hardware, and sufficient test articles for Block II Initial Operational Test and Evaluation (IOTE).

The FAAD C2I Block I First Unit Equipped (FUE) for light division, using SINCGARS, JTIDS, and LSDIS, took place September 30, 1993, when the 101st Airborne (Air Assault) Division, Fort Campbell, formally accepted the Block I FAAD C2I System. The FAAD C2 Block I system deployed a JTIDS (Engineering Development Model) Class 2M radio to provide an AWACS interface.

The DD250 accepting the first GBS preproduction unit was signed May 27, 1993, with a ceremonial rollout at Fort Bliss, TX in June 1993. GBS Development Test Phase I was successfully completed on November 6, 1993 at White Sands Missile Range, NM.

On December 20, 1993 a Letter of Agreement from the Government of Turkey was received concerning Foreign Military Sales (FMS) of GBS for the Turkish Land Forces Command (TLFC) Air Defense Early Warning Demonstration System.

\*\*\* UNCLASSIFIED \*\*\*

FAAD C2I, December 31, 1995

**7a. Program Highlights (Cont'd):**

NCTR RDTE funding after FY94 and all procurement funding was deleted from the President's budget because of affordability.

Existing NCTR technology will be incorporated into FAAD C2I Block II configuration. New NCTR technologies will be incorporated as they become available.

The FAAD C2I Block II Developmental Test (DT) and Force Development Test and Evaluation (FDT&E) were combined to reduce the overall test cost and streamline the data collection and analysis. The FAAD C2I Block II IOTE was successfully completed in Dec 94.

The FAAD C2I Block I System was initially fielded to 5-5 ADA Battalion, 2d Infantry Division, Korea, in Sep 94. Both the ABMOC and the A2C2 elements were fielded to support urgent operational mission requirements.

The FAAD C2I System successfully participated in the National Training Center (NTC) 94-07 Rotation in Apr 94, ATCCS III Integrated Interoperability Demonstration in Jul/Aug 94, and ATCCS Horizontal Integration Demos in Sep 94.

A July 1994 Acquisition Decision Memorandum (ADM) approved Long Lead Item (LLI) procurement and Special In-Progress Review (SIPR) for LRIP decision for GBS. A successful SIPR was conducted in Dec 94, with ADM to follow in Jan 95.

All of the equipment for the FAAD Sensors FMS case with the Government of Turkey was assembled into a Turkish Short-Range Air Defense System, and acceptance testing was held with U.S. Government and Government of Turkey officials in the United States in Jun 94. Upon successful completion of testing, this equipment was shipped to Turkey and demonstrated to representatives of the Turkish General Staff and the Turkish Land Forces Command in Aug and Oct 94. This case was successfully completed, meeting all LOA requirements in Dec 94.

On 15 Jun 94, the FAAD Sensors Product Office and Hughes Aircraft presented the first high mobility multipurpose wheeled vehicle (HMMWV) configured GBS to the Commandant, Air Defense Artillery School, Fort Bliss, TX. Testing of the configuration began with a developmental test in Sep and Oct 94 and continued with the IOTE with a follow-on reliability demonstration to verify the configuration meets the exit criteria. All production units will be in the HMMWV configuration. The configuration will provide the soldier and war fighting commander with a more rapidly deployable and maneuverable air defense system.

FAAD C2I, December 31, 1995

7a. Program Highlights (Cont'd):

The following contracts have been awarded:

FAAD C2 Software development in September 1986, modified in July 1990 to provide the initial air defense command and control capability for light/special divisions, completed on schedule and under cost in September 1993; GBS development (NDI) in February 1992; FAAD C2I software development in December 1992 to provide air defense command and control capability, and the FAAD C2I Block III development contract was awarded in September 1994.

The FAAD C2I Project Office Estimate, Component Cost Analysis and Army Cost Position (ACP) were presented to the Office of the Secretary of Defense Cost Analysis Improvement Group (CAIG) on 7 Apr 95. Official approval of the ACP was granted 21 Apr 95 with the release of the CAIG report.

On 24 Apr 95, The Army Acquisition Executive (AAE) approved and released the Milestone III Acquisition Decision Memorandum (ADM) for the FAAD C2I System. The Military Deputy to the Assistant Secretary of the Army Research Development and Acquisition (ASA(RDA)) chaired the Preliminary ASARC on 10 Mar 95. In the interest of streamlining acquisition, and with the assurance of the Military deputy that all issues presented at the Preliminary ASARC meeting were resolved, the AAE cancelled the ASARC review scheduled for 8 May 95.

b. Significant Developments Since Last Report --

The FAAD C2 Operational Requirements Document (ORD) for Block III was reviewed by Department of the Army Staff, and all nonconcurrences were resolved in May 95. On 12 Jun 95, FAAD C2I System's ORD was approved by the Assistant Deputy Chief of Staff for Operations and plans, Force Development, and Headquarters, Department of the Army. The FAAD C2 ORD was certified by the Joint Requirements Oversight Council (JROC), 22 Jun 95. The JROC completed the required Army Systems Acquisition Review Council Exit Criteria as stated in the FAAD C2I Milestone III Acquisition decision Memorandum dated 24 Apr 95.

The Vice Chairman, Joint Chiefs of Staff, and Chairman, Joint Requirements Oversight Council (JROC) reviewed and validated the FAAD C3I key performance parameters on 7 Aug 95. The JROC designated the Headquarters, Department of the Army (HQDA) approval authority for the FAAD C3I Operational Requirements Document. This action accomplished the Army Acquisition Executive approval for the FAAD C3I full rate production in accordance with the Milestone III Acquisition Decision Memorandum dated 24 Apr 95.

FAAD C2I, December 31, 1995

**7b. Program Highlights (Cont'd):**

The FAAD C2 Block I system completed successful unit fieldings to both the 2d Infantry and 10th Mountain Divisions. The FAAD C2 System was material released to 5-5 ADA Battalion, 2d Infantry Division, Camp Stanley, Korea in Sep 95 and to 3-62 ADA Battalion, 10th Mountain Divisions, Fort Drum, NY in Sep 95. The FAAD C2 Block I System, equipped with the Light and Special Division Interim Sensor, was deployed during the Warrior Focus Advanced Warfighting Experiment in Nov 95. The FAAD C2 Block I system deployed a JTIDS (Engineering Development Model) class 2M radio to provide an AWACS interface.

On 7 Aug 95, the JROC reviewed and validated the key performance parameters for FAAD GBS and ratified the Army's Operational Requirements Document. On 1 Sep 95, the Test and Evaluation Report (TER) was approved by the Army. DOTE prepared the Beyond Low-Rate Production Report and submitted it to Congress in Nov 95.

The Office of Defense Cooperation Turkey (ODC-T) forwarded a Letter of Request for two additional GBS systems to be procured in the FY 96 procurement.

The FAAD C2 Block II system completed a successful First Unit Equipped (FUE) to both the 24th Mechanized Infantry Division in Oct 95. The FAAD C2 System was material released to 1-5 ADA Battalion, 24th Mechanized Infantry Division, Fort Stewart, GA in Sep 95. The FAAD C2 Block II system deployed a JTIDS (Engineering Development Model) class 2M radio to provide an AWACS interface.

The FAAD C2I program is expected to satisfy mission requirements.

**c. Changes Since As Of Date --**

A Hughes Aircraft Company contract award for full scale production for a quantity of 24 sensors was signed 20 Feb 96.

**8. Threshold Breaches:**

There are no breaches to the approved Acquisition Program Baseline (APB) dated 2 Jun 95. There are no Nunn-McCurdy Unit Cost breaches.

**9. Schedule:**

Block I (Light Division)

b. Previous Change Explanations --

Milestone II DAB accelerated from Aug 86 to Jul 86 by DA direction.  
FUE delayed from Jun 91 to Sep 93 due to program restructure. C2I  
Fire Unit Tech Test was renamed to FAAD C2 Block I Development Test  
(DT) and is reported as such.

Depot support Capability changed from Sep 96 to Oct 94 due to revised  
CHS I maintenance concept. As of Oct 94, Tobyhanna Army Depot became  
the depot support.

c. Current Change Explanations -- None.

b. Previous Change Explanations --

The Ao (Light Division) changed to reflect the approved Performance Characteristic. The name for Air Defense Sensor (Single) Light Early Warning Detection Device (LEWDD) was changed to Light & Special Division Interim Sensor (LSDIS). The initial track report delivery time to fire unit (sec) was corrected to match system specifications. MTBOMF (hours) for LSDIS and Generators is no longer being tracked. The approved Block I System Ao is 0.6 per the 2 Feb94 RAM Rationale Report.

c. Current Change Explanations -- None.

d. References --

Development Estimate:  
SDDM August 14, 1986.

Approved Program:  
AAE Approved Acquisition Program Baseline dated June 02, 1995.

Block II/III/IV

Surveillance and Control System) to develop, test and field (FY 93 thru FY 97) an automated means of sharing the low level air picture among adjacent allied armies. Nunn funds received in FY93/94 - \$1.8M.

The FAAD Sensors Product Office signed a Letter of Agreement (LOA), FMS case number TK-B-UXV, with the Government of Turkey on 20 Dec 93 for \$11.3M. This LOA included the GBS system, Light and Special Division Interim Sensor (LSDIS) system, data processing equipment, spares, support equipment, training, and U.S. Government and contractor technical support. This equipment was assembled into a Turkish Short-Range Air Defense System, per LOA requirements, and acceptance testing was held with U.S. Government and Government of Turkey officials in the United States in Jun 94. Upon successful completion of testing, this equipment was shipped to Turkey and demonstrated to representatives of the Turkish General Staff and Turkish Land Forces command in Aug and Oct 94. This case was successfully completed, meeting all LOA requirements, in Dec 94.

d. Nuclear Costs -- None.

AIM-9X, December 31, 1995

5. (U) Related Programs:

F-22, F-15, F-16, F-18E/F and Joint Helmet Mounted Cueing System

6. (U) Mission and Description:

The AIM-9 Sidewinder short-range air-to-air (SRM) is a launch and leave, air combat munition that uses passive infrared (IR) energy for acquisition and tracking and complements the Advanced Medium Range Air-to-Air Missile. Air superiority in the SRM arena is essential and includes first shot, first kill opportunity against an enemy employing IR countermeasures. The AIM-9X is a long-term evolution to the AIM-9. Evolutionary improvements in missile seeker, fuze/warhead, and kinematics allow retrofit of components to current missiles to the maximum extent possible. Retrofitting of components will extend the operational effectiveness of existing inventories at an affordable cost while continuing evolution of the AIM-9 series.

7. (U) Program Highlights:

a. (U) Significant Historical Developments --  
Demonstration/Validation contracts were awarded 20 December 1994 to Raytheon Company and Hughes Aircraft Company.

b. (U) Significant Developments Since Last Report --  
Management System Reviews (MSR) were accomplished in March 1995 for both contractors. Ground-to-Air (GTA) tests 1, 2 and 3 were conducted at NAWC, China Lake in June, August and October 1995 and were successful. Captive Flight Testing (CFT) was initiated in December 1995 at NAWC, China Lake. This started after being granted conditional approval of the Test Readiness Review (TRR). An Early Operational Assessment has also been started using GTA test data from the TRR and the limited captive flights. Design-to-Cost contract modifications were executed in response to the Acquisition Decision Memorandum. The contractors and the Government are converging on a Average Unit Production Cost while incorporating producibility parameters.

Both contractors are experiencing cost growth while executing the DEMVAL contracts, and maintaining the contractual schedules. Additionally, the contractors have been steadily addressing and performing program risk reduction activities per the contract. This effort will further reduce risk prior to Engineering & Manufacturing Development (E&MD).

The (E&MD) draft request for proposal was released to industry in December 1995 with the formal to be released in April 1996.

This system is expected to satisfy mission requirements.

Explanation of Change:

Hughes' unfavorable cost variance is due to their inability to control a major subcontractor's (Texas Instruments) cost growth in the Tracker development areas. Hughes has also encountered unanticipated problems in obtaining Government acceptance/approval of the four (4) risk reduction demonstrations. It is unlikely that Hughes can recover from this negative cost variance by the end of the contract in June 1996. The Program Manager's estimated cost exceeds the contractor's Latest Revised Estimate (LRE) by \$0.7M. Necessary funding exists in the approved budget up to the Program Manager's worst estimated cost. The schedule variance has no impact on the contract.

Explanation of Change:

Raytheon's cost variances are driven by greater support required for Ground Test Unit's (GTU) 1, 2 and 3 than was originally planned. They had also planned on the use of Independent Research & Development (IR&D) software which was not possible. The schedule variance is a result of rework of the detector assemblies and a delay caused by calibration of existing algorithms to improve false alarm performance and acquisition range. The Program manager's estimated cost exceeds the contractor's Latest Revised Estimate (LRE) by \$0.9M. Current budget profile includes additional funds which were directed by the OSD CAIG to fund potential cost growth up to the Program Manager's worst estimated cost.

CPIF Contract - ceiling is not applicable.

5. (U) Related Programs:

Advanced Combat Direction System (ACDS), AEGIS, and E-2C.

6. (U) Mission and Description:

CEC significantly improves Battle Group (BG) Anti-Air Warfare (AAW) by coordinating all BG AAW sensors into a single composite, real time, track picture having fire control quality. CEC distributes sensor data from each ship and aircraft cooperating unit (CU) to all other CUs through a real time, line of sight, high data rate sensor and engagement data distribution network. Each CU independently employs high capacity, parallel processing and advanced algorithms to combine all distributed sensor data into a fire control quality track picture that is the same for all CUs. CEC is highly resistant to jamming and provides accurate gridlocking between CUs.

CEC consists of the Data Distribution System (DDS), the Cooperative Engagement Processor (CEP) and Combat System modifications. The DDS encodes and distributes ownship sensor data and receives and decodes sensor data from other CUs. The CEP is a high capacity distributed processor that processes ownship and other CU data in a timely manner such that its output is considered real time fire control data. This data is then passed to the ship's combat system as fire control data which is used to cue onboard sensors or engage targets.

7. (U) Program Highlights:

a. (U) Significant Historical Developments --

CEC conducted DT-IIA/OT-I testing in June of 1994 which successfully demonstrated CEC concepts and developmental systems. Subsequent to this event, the CEC Carrier Battle Group deployed for six months to the Mediterranean Operating Areas where extensive Battle Group Tactics Exploration was conducted using the CEC system. CEC also participated in Joint Task Force '95 exercises where the importance of CEC to Fleet Tactical Ballistic Missile Defense was shown. A Milestone II Navy Program Decision Meeting (NPDM) was approved 25 May 1995. An Acquisition Program Baseline was approved 10 July 1995. A Program Review was conducted 26-28 July 1995 at which program status was reported and all indicators showed positive progress. An All Service Combat Identification Evaluation Team (ASCIET) exercise was conducted during September 1995 which included the participation of CEC units. An Air DT-I event was successfully

CEC, December 31, 1995

**7a. (U) Program Highlights (Cont'd):**

accomplished at the end of ASCIET using the CEC equipped U.S. Customs Service P-3.

b. (U) **Significant Developments Since Last Report --**  
A CES Hardware Critical Design Review was conducted 7-8 December 1995. During this CDR, the hardware baseline for the CEC CES was reviewed and approved to proceed into assembly and a test of pre-production units by the Program Manager. A CEC Integrated Baseline Review (IBR) was held 11-14 December 1995 at E-Systems. The IBR successfully verified the technical incorporation of the program requirements into the contractors baseline including cost and schedule requirements. Negotiations were completed for the prime contractor, ECI on 29 November 1995. This system will satisfy the mission requirement.

c. (U) **Changes Since As Of Date --**  
The ECI contract was definitized on 31 January 1996.

8. (U) **Threshold Breaches:**  
There are no breaches to the NAE Approved Acquisition Program Baseline dated 10 July 1995. There are no Nunn-McCurdy Unit Cost breaches.

**9. (U) Schedule:**

| Service Depot Support Date          | JUL 00                          | JUL 00                      | JUL 00                      |
| Full Operational Capability         | JUL 00                          | JUL 00                      | JUL 00                      |

b. (U) Previous Change Explanations --

Development Contract Modification was signed 12 June 1995.

c. (U) Current Change Explanations --

(Ch - 1) The Preliminary Design Review Complete was rescheduled from February 96 to July 96 to align with ACDS and AEGIS Combat System software development and integration schedules. Program progress remains on schedule with no impact.

(CH - 1) The Critical Design Review Complete was rescheduled from August 96 to November 96. Same reason for delay. Program progress remains on schedule with no impact.

d. (U) References --

(U) Development Estimate:

NAE Approved Acquisition Program Baseline dated July 10, 1995.

(U) Approved Program:

NAE Approved Acquisition Program Baseline dated July 10, 1995.

NOTE: There are 14 units in LRIP MS I/II, 7 OPN, 5 APN, and 2 SCN.

CEC consists of the Data Distribution System (DDS), the Cooperative Engagement Processor (CEP) and Combat System modifications. The DDS encodes and distributes ownship sensor data and receives and decodes sensor data from other CUs. The CEP is a high capacity distributed processor that processes ownship and other CU data in a timely manner such that its output is considered real time fire control data. This data is then passed to the ship's combat system as fire control data which is used to cue onboard sensors or engage targets.

c. (U) Foreign Military Sales/International Cooperative Programs -- None.

d. (U) Nuclear Costs -- None.

Explanation of Change:

A major contract MOD was negotiated 29 November 1995 and definitized 31 January 1996. At this period E-Systems Contract Budget Baseline (CBB) is consistent with the target price/fee as reflected in negotiations. The Budget at Completion (BAC) is in process of being updated to reflect negotiated targets. Negotiated budgets will be completed by month end January. The overall SV is attributable to delayed material receipts and anticipated closeout of the ALFA subcontract. The overall status of the program, looking further out to IOC and IOT&E dates, has not been impacted. The overall cost variance is reflective of design complexities encountered with Black Processor hardware design and Tactical Design effort in software. During this period the SV has improved by \$4M.

16. (U) Program Funding Summary (Current Estimate in Millions of Dollars):

a. (U) Program Status --

- (1) Percent Program Completed: 17.6% (3 yrs/17 yrs)
- (2) Percent Program Cost Appropriated: 24.1% (\$622.8 / \$2587.8)

18. (U) Operating and Support Costs:

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

CEC, December 31, 1995

**18a. (U) Operating and Support Costs (Cont'd):**

**a. (U) Assumptions and Ground Rules --**

The CEC O&S costs include applicable costs in accordance with CAIG Operating & Support Cost Estimating Guide of May 1992.

1. **MISSION PERSONNEL:** The costs of maintenance personnel defined in the CEC Navy Training Plan of December 1993 are included. The costs of operations personnel and other mission personnel are excluded since CEC requires no system specific operators or support personnel.

2. **O, I, & D MAINTENANCE:** Costs for labor, overhead, material, and repair parts projected to be performed at O, I and D-level maintenance activities have been included.

3. **CONTRACTOR SUPPORT:** Costs for interim contractor Integrated Logistics Support (ILS) pending establishment of organic Navy capabilities are included.

4. **SUSTAINING SUPPORT:** The costs of continuing engineering support and software maintenance projected for Navy in-house facilities have been included. Also included are costs to provide, operate and maintain CEC training equipment at projected training sites. Costs for support equipment, and modification kit procurement/installation have not been included since there are no unique support equipment requirements and there are no currently planned modifications to CEC equipment.

5. **PERSONNEL SUPPORT:** Costs for initial training, permanent change of station (PCS) and medical support have been included. Training course costs for maintenance personnel are also included. There are no specific training course requirements for CEC operator personnel.

5. Related Programs:

Joint Direct Attack Munition (JDAM), Air Force Mission Support  
System (AFMSS)

6. Mission and Description:

The Air Force has established the requirement to enhance the capability of the B-1B Lancer to perform near precision attacks against all but heavily defended targets deep in enemy airspace during conventional operations. The requirement is satisfied with a

6. Mission and Description (Cont'd):

material solution to provide the B-1B with improved lethality through the integration of near precision conventional weapons such as the Joint Direct Attack Munition (JDAM). As part of the advanced munitions integration, implementation of MIL-STD-1760 electrical interconnect system, computer upgrades, communication upgrades and the Global Positioning System (GPS) is included. The B-1B CMUP is a modification program integrating predominantly non-developmental items to enhance aircraft conventional mission capabilities. While the B-1 will operate primarily in a conventional role, these modifications will not degrade its capabilities to fight in a nuclear role. With the enhanced conventional capabilities available through the CMUP effort, the B-1 will maintain its role as the backbone of the Air Force's bomber fleet.

7. Program Highlights:

a. Significant Historical Developments --

On 16 Mar 95 - B-1B CMUP-JDAM contract awarded to Rockwell, North American Aircraft. On 11 Oct 95 - McDonnell Douglas selected as JDAM contractor.

b. Significant Developments Since Last Report --

Block D B-1 CMUP-JDAM software Preliminary Design Review (PDR) was successfully completed 30 Nov 95. All software technical performance metrics are within expected ranges. JDAM (Block D) System hardware /software PDR was successfully completed in Nov 95. Safe separation flight testing began 1 Dec 95, and all test results to date have been as expected. By Dec 95, 6 JDAM test vehicles have been successfully separated (2 from each weapons bay). With the concurrence of AFPEO/FB and SAF/AQ we are planning a Low Rate Initial Production decision for JDAM/1760 launcher in Jun 98. The first Low Rate Initial Production (LRIP) contract award for JDAM launcher kitproof upgrade kits (3) remains scheduled for Jun 96. The change in program planning includes a second LRIP (21 kits upon receipt of SAE LRIP quantity approval) scheduled for Jun 98 to support accelerating JDAM capability onto the B-1. The full rate production decision (MS III) with associated Live Fire Test and Evaluation (LFT&E) and Initial Operational Test and Evaluation (IOT&E) test report will be in Oct 98. The B-1 SPO is working to accelerate the LFT&E report submittal to OSD by Apr 98.

The program is implementing Demand Assigned Multiple Access (DAMA) for satellite communications which went on contract 30 Nov 95 as an undefinintized contract action (UCA).

The scope of the computer program has been defined. The program will now provide open architecture 32-bit hardware and ADA software. This

7b. Program Highlights (Cont'd):

will result in the best technical solution and result in long term O&S cost reduction. Wind Corrected Munitions Dispenser (WCMD) capability will be implemented concurrently with the computer upgrade. An interim Advanced Change Study Notice (ACSN) for WCMD Interface Control Development was issued to Rockwell International (RI) for interface development activities. Contract award for the computer/WCMD program is scheduled for May 96.

The upgrades to the B-1B system outlined in the above description will enable the user to satisfy mission requirements.

c. Changes Since As Of Date --

For Demand Assigned Multiple Access (DAMA) a bi-lateral contract modification was issued in Mar 96.

8. Threshold Breaches:

There are no cost or schedule breaches to the DAE Approved Acquisition Program Baseline dated January 25 1995.

9. Schedule:

a. Milestones --

B-1 CMUP-JDAM, December 31, 1995

9a. Schedule (Cont'd):

97 is for procurement of GPS/Comm GFE Group B hardware which has a delivery lead time of 21 months. Milestone Decision Authority (MDA) is the Service Acquisition Executive (SAE) for both LRIP and follow-on production kits. The program also defines Low Rate Production Contract Award as the contract award for the kitproof upgrade kit, Low Rate Initial Production First Delivery as the delivery of the first kitproof upgrade kit, and Full Rate Production Contract Award as the production contract award for follow-on upgrade kits. The program's Organic Support Capability Date is the date O-I level maintenance is in place at main operating base, and the Depot Support Date is the date organic depot support is declared or contract depot support is in place. The program's Initial Operational Capability, agreed to by HQ/ACC, is defined as the Required Assets Available (RAA) date. RAA for JDAM/1760 is defined as the date assets consisting of three modified aircraft, a total of three modified module/launchers, associated O-level support equipment, O-level spares, verified O-level maintenance and flight manuals, and source data to support training systems, programs and courses are delivered to the using command. RAA for GPS/Communications and Computer is defined as the dates assets consisting of three modified aircraft, associated O-level support equipment, O-level spares, verified O-level maintenance and flight manuals, and source data to support training systems, programs and courses are delivered to the using command. Computer upgrade dates have been revised to reflect the recent computer upgrade program decisions.

b. Previous Change Explanations -- None

c. Current Change Explanations --

Ch 1- In order to accelerate B-1/JDAM integration, the JDAM weapon development flight test activities were excised from the B-1 program. This will allow us to complete IOT&E early, accelerate the production decision, achieve organic and service depot capability support earlier and attain IOC in Jun 00 versus Jul 01.

There is an overall explanation of the schedule date changes for the computer. The original dates were based on a "generic" computer upgrade program. In Nov 95, ACC approved the technical solution (which is referred to as Option 1), and the schedule was refined in Dec 95 to reflect the current dates.

|-----------------------------------|---|---|---|---------------------------|---|
| Accurate GPS-Aided Munition       | Capabil-<br>ity to<br>airborne<br>retarget<br>GPS-<br>aided<br>munition<br>(intent<br>JDAM) | Capabil-<br>ity to<br>airborne<br>retarget<br>GPS-<br>aided<br>munition<br>(intent<br>JDAM) | / Capabil-<br>ity to<br>employ<br>GPS-<br>aided<br>munition<br>(intent<br>JDAM) | TBD                       | Capabil-<br>ity to<br>airborne<br>retarget<br>GPS-<br>aided<br>munition<br>(intent<br>JDAM) |
| Mission Capable (MC)<br>Rate (%)  | 75  | 75  | / 65  | TBD                       | 65  |
| Supportability<br>CWIU MTBF (hrs) | 3000  | 3000  | / 1000  | TBD                       | 1600  |

Note (For Information only): Basic performance factors for the B-1B (speed, weight, range, terrain following /avoidance performance) will not be significantly affected by the CMUP-JDAM integration effort.

1. Mission Capable Rate as expressed applies to the overall fleet aircraft wartime mission capable rate. The integration of the weapons upgrade modifications will not cause the fleet MC rate to degrade below the threshold value. For information only - the following reliability and maintainability parameters are specified in the weapons upgrade contract specifications: mean time between critical failure, mean time between unscheduled maintenance, maintenance manhours per flight hour, and max/mean repair time on equipment. These parameters will be used to support MC rate calculations.

2. OSD/WSIG requested the addition of a supportability parameter that measures and tracks the weapon system upgrade reliability. The agreed to parameter is the mean time between failure (MTBF) of the Conventional Weapons Interface Unit (CWIU). This parameter was selected because this line replaceable unit (LRU) is the only conventional system carriage modification item that requires development. The specified values for the threshold and objectives are for system maturity. System maturity for the CMUP weapons upgrade occurs at IOC plus 15,000 operating flight hours.

See section 16 for buy profile of modification kit quantities by fiscal year.

The B-1 CMUP-JDAM program consists of the following modifications: GPS/Communications (Comm)/Mil-Std 1760/JDAM carriage, and a Computer upgrade. The program will modify 95 aircraft, and will procure the same number of kits for GPS/Comm. The 1760/JDAM modifications will provide 126 launcher upgrade kits (O/I level installation) and the Computer upgrade will provide 95 kits for aircraft install (8 other kits will be purchased: 5 for simulators, 3 lab units). Fiscal year

12. Unit Cost Summary (Cont'd):

buy schedules summarizing total kit quantities by year are in section 16c.

APB JAN 95 PER UNIT DATA:

1. Procurement quantities and Average Unit Procurement Cost (AUPC) data included in APB is:

|                           | Qty | AUPC OBJ/THRESH (FY95 \$M) |
|---------------------------|-----|----------------------------|
| GPS/Comm/JDAM/1760        | 95  | 2.080/2.392                |
| Computer (Acrft/grnd spt) | 103 | 1.690/1.944                |

2. AUPC for these modifications includes Group A&B kits costs and non-recurring costs such as initial spares, modification of spares, support equipment items, data, and installation. Based upon average kit procurement rates of 47/yr and 26/yr for GPS/Comm/JDAM/1760 and computer upgrades respectively.

3. GPS/Comm/JDAM/1760 upgrade kits consist of 95 aircraft kits plus 126 launcher modification kits. Computer upgrade kits consist of 103 kits (95 aircraft kits for install and 5 for simulators and 3 lab units).

The B-1 CMUP-JDAM program consists of a Global Positioning System (GPS) with a Communication upgrade (Comm), a Mil-Std 1760 Weapon Interface Unit (1760) with rotary launcher modifications for JDAM carriage, and a computer upgrade. The quantities in Sec 16.C. table are the kit quantities (e.g. FY96 procures 3 JDAM/1760 launcher kits and 1 GPS/Comm kit). The GPS/Comm kit buy schedule (FY96-FY98) is 1,22,72 with installations (FY98-FY00) of 1,22,72 to comply with the GPS 2000 mandate. Installation funding is provided in the year install occurs. The 1760/JDAM buy schedule (FY96-FY00) 3,0,21,66,36 procures 126 rotary launcher kits and is an organizational/intermediate level installation. The computer upgrade will purchase 103 kits (FY99-FY04) 3,0,17,28,29,18, 95 for aircraft, 5 for simulators, 3 for labs. Aircraft installs (FY00-FY06) will be 3,0,3,28,28,29,4, and are funded in the year they occur. In FY05 and FY06 there are no quantity buys as funding is for modification kit installation only.

17. Production Rate Data:

- a. Deliveries to Date -- 0/0.
- b. Approved Design-to-Cost Objective -- N/A.

\*\*\* UNCLASSIFIED \*\*\*

B-1 CMUP-JDAM, December 31, 1995

18. Operating and Support Costs:

a. Assumptions and Ground Rules --

This estimate was prepared by ASC/ALTD as part of the Service Cost Position for the DAB Approved Acquisition Program Baseline dated 25 January 1995.

The B-1 CMUP-JDAM Cost Analysis Requirements Description and Service Cost Position estimate were used as the basis for this estimate. The HQ ACC/XPM Manpower Estimate Report was used with a "beddown" O&S Phase In of FY98-FY06 and Steady State FY07-FY26. A 1.48 Utilization Factor (Equip Op Hrs per Flying Hour) was used for 95 aircraft at 323/FH/Acft/Yr.

Per CAIG direction, O&S costs do not include software maintenance. Changes to the computer upgrade program now include conversion to ADA software. It is expected this new software will significantly reduce maintenance costs in future years, after completion of the computer upgrade. The O&S estimates here do not reflect these savings, since this cost element is not included.

There is no antecedent system.

b. Costs -- (FY 1995 Constant (Base-Year) Dollars in Millions)

| Cost Element            | Avg Annual Cost Per<br>95 B-1 Aircraft CMUP<br>Modifications | Avg Annual Cost Per<br>Antecedent |

BFVS A3 Upgrade, December 31, 1995

#### **6. Mission and Description (Cont'd):**

facilitate enhanced command and control, provide greater lethality, provide mobile protected transport of an infantry squad to critical points on the battlefield and perform cavalry scout and other claimant (Bradley equipped Fire Support and Stinger Teams) missions in the 21st century. Upgrades in this program include advanced technology in the areas of command and control, lethality, survivability, mobility, and sustainability required to defeat current and future threat forces while remaining operationally compatible with the main battle tank. The M2A3/M3A3 will provide overwatching fires to support the dismounted infantry, and suppress/defeat enemy tanks, reconnaissance vehicles, IFV, armored personnel carriers, bunkers, dismounted infantry, and attack helicopters. The infantry version (M2A3) of the A3BFV is used most often to close with the enemy by means of fire and maneuver. The primary tasks performed by the cavalry version (M3A3) as part of a troop and/or squadron are reconnaissance, security, and flank guard missions. The Bradley Fire Support Team vehicle (BFIST) variant acquires targets and coordinates all indirect fire support assets. The Stinger claimant version provides close in air defense from aerial attack, missile attack, and surveillance.

#### **7. Program Highlights:**

##### **a. Significant Historical Developments --**

The Bradley A3 effort is part of the overall Bradley Modernization program aimed at upgrading the existing fleet by correcting deficiencies identified in the 1994-2008 Battlefield Development Plan, while accomplishing the intent of the Bradley Base Sustainment Program approved by the Secretary of Defense as part of the FY94 Amended Budget Submission. The BFVS is on the Department of the Army's Industrial Preparedness Planning List, making it essential to the Army combat needs to domestically manufacture/remanufacture these vehicles. Acquisition Decision Memorandum (ADM) approval was received on Mar 29, 1994.

##### **b. Significant Developments Since Last Report --**

The Preliminary Design Review (PDR) was successfully completed in Jul as planned. The Critical Design Review (CDR), scheduled for Dec, was postponed until Jan 96. This was necessary to allow all major subsystems to complete their CDRs. The Commander's Independent Viewer, a major subsystem of A3, delivered its emulator to the System Integration Laboratory (SIL) in Oct. The Improved Bradley Acquisition System (IBAS), another major subsystem of the A3, delivered its advanced prototype to the SIL in Dec. The Position/Navigation (POS/NAV) system and the Power Control Module (PCM) also made the prototype deliveries to the SIL in 1995. Integration challenges with 2nd Generation Forward Looking Infra-red (FLIR) Horizontal Technology Integration (HTI) B-kit provided a management

BFVS A3 Upgrade, December 31, 1995

7b. Program Highlights (Cont'd):

challenge to reduce the impact to the A3 schedule. Working closely with PM-FLIR, PM-CCAWS, and the contractor community, work arounds were developed and implemented to ensure that the integration of the HTI B-kit is accomplished on schedule and that the first Bradley A3 prototype vehicle delivery in Aug 96 remained unaffected.

The BFVS A3 Upgrade is expected to satisfy mission requirements.

c. Changes Since As Of Date -- None.

8. Threshold Breaches:

There is a cost breach (greater than 5% total procurement) to the Approved Acquisition Program Baseline (APB) dated March 29, 1994, and a Program Deviation report will be submitted. There are no Numm-McCurdy unit cost breaches.

9. Schedule:

b. Previous Change Explanations --

RDT&E

Quantity: Quantity variance resulting from transfer of two units to procurement

Estimating: Revised estimate due to change in methodology. Inclusion of OPTEC funding.

Procurement

Quantity: Quantity variance resulting from transfer of two units from RDT&E.

Schedule: FUE schedule change from FY98 to FY00.

Engineering: Addition of Pontoons for swim capability and of armor hatches.

Estimating: Revised estimates based on change in methodology.

15. Contract Information (Then-Year Dollars in Millions):

a. RDT&E --

A3 EMD:

United Defense (LP), San Jose, CA  
DAAE07-94-C-0456, CPIF  
Award: May 19, 1994  
Definitized: June 30, 1995

| Initial Contract Price |         |     |
|------------------------|---------|-----|
| Target                 | Ceiling | Qty |
| \$280.0                | N/A     | 8   |

| Current Contract Price |         |     |
|------------------------|---------|-----|
| Target                 | Ceiling | Qty |
| \$278.0                | N/A     | 8   |

| Estimated Price At Completion |                 |
|-------------------------------|-----------------|
| Contractor                    | Program Manager |
| \$278.0                       | \$288.2         |

|   | Cost Variance | Schedule Variance |
|---|---------------|-------------------|
| Previous Cumulative Variances           | \$2.8         | \$-3.8            |
| Cumulative Variances To Date (12/30/95) | \$-4.5        | \$-7.2            |
| Net Change                              | \$-7.3        | \$-3.4            |

Explanation of Change:

The unfavorable cost variance is due to increased personnel staffing and additinal design changes resulting from change to 2nd Gen FLIR. The unfavorable schedule variance is due to the behind schedule position of three sub-components. The first vehicle prototype deliveriy in August 96 remains unaffected by the schedule variance.

| <u>Target</u>          | <u>Ceiling</u> | <u>Qty</u> | <u>Contractor</u>             | <u>Program Manager</u> |
| \$59.1                 | N/A            | 14         | \$61.9                        | \$63.3                 |

|   | <u>Cost Variance</u> | <u>Schedule Variance</u> |
|---|----------------------|--------------------------|
| Previous Cumulative Variances           | \$1.0                | \$-1.4                   |
| Cumulative Variances To Date (12/31/95) | <u>\$-3.0</u>        | <u>\$-0.9</u>            |
| Net Change                              | \$-4.0               | \$0.5                    |

Explanation of Change:

The unfavorable cost variance is due to a significant increase in software lines of code, an unscheduled interim software release to support SIL requirements and increased hours to support hardware and software integration in prototype unit #1. The favorable schedule variance is due to a replanned schedule from 41 months to 48 months and solving a delivery problem.

16. Program Funding Summary (Current Estimate in Millions of Dollars):

a. Program Status --

- (1) Percent Program Completed: 23.1% (3 yrs/13 yrs)
- (2) Percent Program Cost Appropriated: 6.1% (\$252.4 / \$4125.9)

17. Production Rate Data:

a. Deliveries to Date -- 0/0.

b. Approved Design-to-Cost Objective -- N/A.

18. Operating and Support Costs:

a. Assumptions and Ground Rules --

Operation and support costs reflect world wide regular Army activity and are presented as an estimate of the average annual cost per fielded M2A3 and M3A3. These costs assume an average operating tempo of 880 miles per year(per ODCSOPS Training Directorate). The source for this cost estimate is the A3 Army Cost Position (ACP), dated January 1994.

There is no antecedent.

6. Mission and Description (Cont'd):

serves the Commander and Staff Corps, Division, Brigade, and Maneuver Battalion. The system provides automated assistance in the coordination of plans, dissemination of orders and guidance, and the monitoring and supervision of operations. MCS is the force level commander's information system and integrates the maneuver functions with the automated or manual Command and Control (C2) systems of the other four functional areas. (The other four functional areas are: Fire Support, Air Defense, Intelligence/Electronic Warfare, and Combat Service Support). MCS versions of software will extend automated command and control capabilities down to battalion/squadron, company/troop, squad/weapon system and platoon level through the subordinate systems to MCS.

The Maneuver Control System (MCS) is a collection of computer equipment which supports operation planning and control at one of the five nodal points (Maneuver Control) of the Army Tactical Command and Control System (ATCCS). MCS currently consists of the Non-Development Items (NDI) such as the Tactical Computer Processor (TCP) nomenclatured AN/UYQ-43(V)1. It is a microprocessor based portable system which provides automated assistance to the maneuver commanders. The Analyst Console (AC) nomenclatured AN/UYQ-43(V)2, is a microprocessor based intelligent terminal, connected to the TCP via Local Area Network, which provides multiple workstations within a nodal configuration.

The TCP/AC were transitioned with currently fielded software Version 10.03.1G1, from OPM OPTADS to the Communications-Electronics Command (CECOM) on Oct 4, 1992. The NDI equipment (TCP/AC) will be replaced by Common Hardware (CH). CH is composed of CHS-2 computers which will exceed the capability and the processing of the TCP/AC. These devices are to be fielded to all US Army Tactical Units. They are smaller and lighter and provide ease of transportability to all ATCCS users.

7. Program Highlights:

a. Significant Historical Developments --

In 1980, the first elements of the MCS were fielded to VII Corps in Europe, which consisted of Engineering models of the AN/UYQ-30 Tactical Computer Terminal (TCT) with a limited Command, Control and Communications (C3) capability. In 1981 the system was enhanced with additional TCT's and increased software C3 capabilities. In 1982, the MCS program was continued by awarding a MCS System Engineering/Integration and Software Development contract which was awarded to Ford Aerospace and Communication Corporation (FACC). This five year effort continued the MCS evolutionary development. By 1986 the software had evolved to Version 9, was written in Ada, fielded with production TCTs in Europe, and ported to the Tactical

**7a. Program Highlights (Cont'd):**

Computer Processor (TCP) prototype. In 1986 the production contract for the AN/UYQ-43 (V)1/(V)2 TCP/AC Non- Developmental Item (NDI) was awarded. In 1987 the second five year evolutionary development effort was awarded to FACC (now Loral Command and Control Systems) for the software effort and a separate contract was awarded to TRW for the system engineering/integration effort. Under these efforts, Version 10 software was completed, and fielded in 1989.

MCS Version 11 software development effort was continued under Loral. However, Loral experienced significant delays in their development effort. As a result, there was little confidence in Loral's ability to deliver Version 11 without further schedule slips and cost growth. The decision was made by the Army to discontinue funding the contract. The Army decided the MCS requirements could best be satisfied by an alternative other than continuing the Loral contract effort. The decision to discontinue the development contract beyond the current target contract price, was approved by the Army Acquisition Executive via a memorandum dated February 24, 1993.

A restructured MCS program strategy was presented to and approved in concept by the OSD C3I Committee on March 11, 1993. OSD formal approval was received via an Acquisition Decision Memorandum (ADM) dated April 6, 1993. The revised approach to complete Block III development is described as MCS Version 12.0. Version 12.0 is a rapid prototype effort which relies on Common Hardware, and a foundation of Common Operating Environment (COE) to support standalone applications which provide an initial maneuver control capability, supports horizontal interoperability testing with other BFA control systems, and exploits reusable software from MCS Version 11.0.

In August 1994 MCS V12.0 successfully completed an Integrated Interoperability Demonstration (as an MCS Operational Assessment) which was included as a part of the ATCCS level testing at Fort Hood, Texas. The MCS Operational Requirements Document (ORD) (October 26, 1992) remains valid for Version 12.0. The PEO C3S directed the FM OPTADS to replan the program on December 22, 1994, due to the continued delays in the CHS-2 hardware contract award. This direction required substituting a Limited User Test (LUT) for the the IOT&E. Also, the program was to proceed toward a Low Rate Initial Production (LRIP) decision to procure CHS-2 hardware to be used for the MCS IOT&E. This program strategy was subsequently changed when the MCS program came under the Integrated Product Team process in May 1995.

The Block IV effort is basically a combat developer approved sequencing of pre-planned product improvements to the Block III baseline functionality, providing application and functionality enhancements which will reside on the software foundation developed under Block III. Block IV encompasses development of MCS software

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

MCS, December 31, 1995

7a. Program Highlights (Cont'd):

versions 12.1, 12.2 and 12.3 and fielding of this upgraded functionality to the Army, once each of the three versions have successfully passed a Follow On Test and Evaluation (FOT&E). Software enhancements in Version 12.1 through 12.3 include developing and analyzing basic course of action wargaming, and embedded training at the operator and staff section level.

b. Significant Developments Since Last Report --

Due to the continued delays in the CHS-2 contract award, PM OPTADS was re-directed to re-plan the MCS program in accordance with guidance provided by the DISC4 General Officer In-Process-Review on Army Tactical Command and Control System tests dated 4 May 1995. An OSD chaired Integrated Product Team (IPT) was established for this purpose. To reduce test costs in FY95 and to accomodate early conversion to CHS-2, PM OPTADS planned and executed a System Segment Acceptance Test in February 1996 and will execute a Customer Test in April 1996 of the MCS Block III system in lieu of the Limited User Test projected for November 1995. MCS V12.01 will now undergo an IOT&E in November 1996. The November 1995 Overarching Integrated Product Team (OIPT), resulted in the approval of the Acquisition Program Baseline (APB) and the Acquisition Strategy Report (ASR), the authorization to release the Block IV Request for Proposal (RFP) and for a limited release of MCS Phoenix "Beta" software to selected units for experimentation/evaluation and user feedback into software development.

MCS is expected to satisfy mission requirements.

c. Changes Since As Of Date -- None

8. Threshold Breaches:

There are no breaches to the approved Acquisition Program Baseline (APB) dated December 18, 1995. There are no Nunn-McCurdy unit cost breaches.

b. Previous Change Explanations --

The schedule dates were changed from the SAR baseline (Dec 91) due to a program restructure. The CHS SW Verification Test, FUE/IOC were no longer applicable because the verification/testing concept changed from separate hardware and software to a systems testing, which consists of Common Hardware and V11 Software. The FOT&E schedule date was not applicable because the initial test performed in Europe for the V10 Software, hosted on the TCT equipment, was considered equivalent to an IOT&E, therefore, in the 89 Acquisition Program Baseline (APB) the next schedule test was an FOT&E. That test was considered inappropriate for the current program strategy. IOT&E was added because it is required prior to the production decision for the CH equipment and V11 Software, therefore the May 93 date was reflected as a current estimate. Version 11 schedule date changed from Sep 91 to Feb 93 due to major factors in the slippage of V11 Software. In FY-91 a congressional funding reduction (\$8.6M) led to a scope reduction of work efforts by the software development contractor. There were technical difficulties in the development of the system and communications software using Commercial Off The Shelf (COTS) software. There was also a fire at the software contractor's facility, which caused disruption and slippage in schedule. There

9b. Schedule (Cont'd):

were subsequent briefings to the Management Review Panel (MRP) (25 Nov 92 and 11 Feb 92) on the MCS software development status by PM OPTADS. The MRP did not recommend approval of the MCS APB until the schedule and technical assessment of the contractors effort met the software deliveries for the Early User Test and Evaluation in Sept 92 and the Initial Operation Test and Evaluation in May 93.

Milestones were added to the Dec 92 SAR, with the approval of the APB dated 6 June 1992. Due to Loral's failure to deliver Version 11 software on schedule and within cost, a decision was made by DA to discontinue funding Version 11 software development effort. This caused milestone schedule breaches to the Acquisition Program Baseline (APB) dated 6 June 1992 and the reason for the current estimate showing N/A's. A program deviation report was prepared and MCS APB was revised.

Dec 94 SARs current milestones represented the PEO-CCS directed re-planned program supported by the President's Budget Feb 1995. A revised MCS APB was in process.

c. Current Change Explanations --

(Ch-1) - These schedule milestones are no longer being tracked.

(Ch-2) These schedule milestones are new and were introduced as a result of the new approved APB dated December 18, 1995.

(Ch-3) - The schedule milestones listed below changed as a result of the re-planned program according to guidance provided by the DISC4 general officer In-Process Review as follows:

|                               | From   | To     |
|-------------------------------|--------|--------|
| Block III - IOC               | Nov 97 | Nov 98 |
| Block IV - Award MCS Contract | May 96 | Jul 96 |
| MCS Version 12.1 FOTE         | Aug 98 | Jun 98 |
| MCS Version 12.2 FOTE         | Aug 99 | Jun 99 |
| MCS Version 12.3 FOTE         | Aug 00 | Jun 00 |

NOTE:

- 1/ (Development Baseline - October 16, 1989) Purging System Memory - Purge the system, memory, excluding tape, within 3 minutes.
- 2/ (Development Baseline - October 16, 1989) User has not established a required Ao for the MCS system
- 3/ (Development Baseline - October 16, 1989) Continuity of Operations - Data elements in maneuver, enemy, NBC, and other data base partitions shall not display more than 1 hour difference in age between same echelons CPs, while their CPs are operational in 80% of the sample.

\*\*\* UNCLASSIFIED \*\*\*

MCS, December 31, 1995

10a. Performance Characteristics (Cont'd):

4/ (Development Baseline - October 16, 1989) Fidelity - That which is transmitted, is transmitted with a least 95% fidelity.

5/ (Development Baseline - October 16, 1989) Quality - Data concerning current location and status of a maneuver battalion shall not be more than 4 hrs old at Corps, 2 hrs old at Division and 1 hr old at Brigade.

6/ Contract Specs - Performance parameters are consistent with the MCS ORD for Block IV. Contract Specs are not applicable for Operational Availability because the equipment is in the hands of the unit and beyond the control of the contractor.

b. Previous Change Explanations --

The Dec 94 SAR added performance parameters, which represented the PEO CCS directed re-planned program and were consistent with DA2028 changes that updated the MCS ORD for Block IV.

c. Current Change Explanations --

(Ch-1) - These parameters are no longer being tracked.

(Ch-2) - These parameters were added based on the approved MCS ORD and the revised APB approved on December 18, 1995.

(Ch-3) - Based on the MCS ORD and the revised APB, the listed parameters changed as follows:

|                              |         |        |
|------------------------------|---------|--------|
| Block IV                     | From    | To     |
| Continuity of Operations     |         |        |
| Commander's Situation Report |         |        |
| Availability After:          |         |        |
| Planned Outage               | 60 min  | 15 min |
| Unplanned Outage             | 120 min | 45 min |

b. Previous Change Explanations --

RDT&E

Economic: Revised escalation indices. Adjustment for Negative Program Change.

Estimating: Adjustment for current and prior inflation. Revised estimate associated with reprogramming of R&D funding FY90-FY00. Revised estimate associated with reprogramming of R&D funding FY93-FY00. Revised estimate based on reduced funding in FY94-FY00. A 1+ year delay (from FY94 to FY95) in CHS-2 contract award to allow completion of MCS Block III and delayed the releasing of the MCS Block IV contract due to funding shortfalls stretched the R&D effort.

\*\*\* UNCLASSIFIED \*\*\*

MCS, December 31, 1995

13b. Cost Variance Analysis (Cont'd):

Procurement

Economic: Revised escalation indices. Economic adjustment for negative program change.

Quantity: Reduction in Active Army Force Structure from 6365 to 5667. A correction to the Dec 91 SAR to recategorize from a Schedule change to a Quantity change. Quantity variance in Dec 94 SAR, resulted from a decrease of 2414 units from 5667 to 3253, due to change in program requirements.

Schedule: One year production delay due to a slip of the IOT&E test from May 92 to Mar 93. Change in procurement buy schedule, program slipped two years. A correction to the Dec 91 SAR to recategorize from a Schedule change to a Quantity change. A change in annual procurement buy profile from FY-95 to FY-96. The Dec 94 SAR reported continued delays in the CHS-2 contract, in which PM OPTADS was directed to replan the program to reflect a LUT in FY95, (R&D) and an LRIP in FY96 (proc), which caused an increase in schedule.

Engineering: Engineering upgrades of NDI equipment to a 375 processor and 8MB RAM increase.

Estimating: A revised estimate of hardware costs based on actual contract data. Adjustment for Current & Prior Inflation. Reconcile differences between flyaway and support due to changes in cost estimating assumptions and techniques. The Dec 94 SAR's revised estimate accounted for a restructured program based on anticipated CHS-2 costs which were higher than CHS-1.

Support: Transition of OMA support dollars to OPA support dollars. Adjustment for Current & Prior Inflation. Initial Spares increased due to a change in methodology (% applied) for the LCU's and an increase in spares due to the extension of the program by two years. Support/Fielding costs have decreased due to realignment of a support element to flyaway and changes in support/fielding requirements. A correction to the Dec 91 SAR to recategorize from a Support change to an Estimating change. A decrease in spare requirements pending approval of a new restructured program. Increase in support/fielding costs due to changes in requirements associated with a 3 year stretch in the program. The Dec 94 SAR Initial Spares increased due to a change in requirements. Support/Fielding in the Dec 94 SAR, decreased due

The recurring costs from FY89 through FY93 were for hardware component upgrades and for software development through FY90 and no end items were purchased. Until the MCS initial spare line is corrected, initial spares are shown in FY02 to support fielded equipment from FY96 through FY01. Expenditures and obligations reflect program office records as of March 6, 1996.

17. Production Rate Data:

a. Deliveries to Date --

|             |                    |

b. Approved Design-to-Cost Objective -- N/A.

The MCS program will utilize common hardware equipment. There is no Design-to-Cost Objective for this program.

18. Operating and Support Costs:

\*\*\* UNCLASSIFIED \*\*\*

MCS, December 31, 1995

18a. Operating and Support Costs (Cont'd):

a. Assumptions and Ground Rules --

Major assumptions and ground rules used to estimate operating and support costs are as follows: There is no antecedent system for MCS. All MCS operating costs are estimated based upon peacetime usage rates. Costs are based on an operating life of 20 years. In each year that MCS workstation is fielded, it will be fielded with the latest available version of MCS software. In years in which a new version becomes available any equipment already in the field will require an upgrade to its software, as well as a retraining from the NET team. This will be the case until all the Army units are equipped with Version 12.3 software. No Military Occupational Specialty (MOS) nor Skill Identifiers have been authorized for MCS. Therefore, MCS has no dedicated military operation crew. CHS-2 equipment is contractor maintained. The CHS-2 contract with GTE includes a charge for contractor maintenance of the equipment in the component unit cost. Spares and repair parts are procured in each year that equipment is in the field. For the first year that equipment is in the field it will utilize Initial Spares and Repair Parts, and Replenishment Spares and Repair Parts thereafter. The sustaining investment consists primarily of replenishment repair parts (Vehicles, Standard Integrated Command Post System (SICPS), generators) and replenishment spares for all equipment). There is depot maintenance labor for the end item vehicles for the CHS-2 equipment. POL is required for all the vehicles and generators to support the CHS-2 equipment.

SADARM, December 31, 1995

5. (U) Related Programs: None.

6. (U) Mission and Description:

The SADARM smart munitions will provide an enhanced counterfire capability for the 155mm Howitzer delivery system capable of attacking targets well beyond the Forward Line of Troops (FLOT) in a fire and forget mode. This indirect fire mission can be accomplished under inclement weather, degraded battlefield conditions and Nuclear, Biological, Chemical (NBC) environments, both day and night. The SADARM munition is designed for use against self-propelled howitzers, lightly armored personnel carriers and other stationary armored threat vehicles encountered in counterfire, close support, Suppression of Enemy Air Defense (SEAD) and interdiction. The SADARM Munition Need and Planned Operational Environment description is contained in the SADARM Required Operational Capability (ROC) document dated 11 March 1986 and as revised 18 June 1987, and in an Operational Requirements Document (ORD) dated 3 August 1994. The system is comprised of the following major components: multi-mode sensor with infra-red, and active and passive millimeter wave; lethal mechanism with explosively-formed penetrator; parachutes which control deceleration, spin and descent velocity; fuzing, safe and arm device; and appropriate carrier hardware.

7. (U) Program Highlights:

a. (U) Significant Historical Developments --  
Aerojet and Honeywell (now Alliant Techsystems) were selected in September 1986 to complete competitive Full Scale Development (FSD) of the submunitions and carriers for the 155mm and 8 inch projectiles and submunitions for the MLRS Rocket. In December 1986, LTV was selected as the MLRS Rocket integration contractor. In July 1989, both FSD submunition/projectile contractors scored hits with live 8 inch hardware in the Congressional Demonstration Test. However, the requirement for the 8 inch SADARM had been previously eliminated when the Army developed plans to retire the 8 inch howitzer from the inventory.

In 1991, due to changes in the Eastern European threat, the Army Acquisition Objectives (AAO) for the MLRS SADARM and the 155mm SADARM were reduced by 60% and 38% respectively, causing a Program Acquisition Unit Cost (PAUC) breach in excess of 25%. On May 3, 1991, the Under Secretary of Defense for Acquisition (USD(A)) certified the program to Congress. In May 1991, a new acquisition strategy for the completion of Engineering & Manufacturing Development (EMD) (formerly FSD) was implemented due to budget reductions. In March 1991, after an extensive design select effort in which both competing EMD contractors scored direct hits with 155mm SADARM projectiles, the Aerojet design was chosen for EMD completion. Aerojet and Alliant teamed together in a Prime/Sub arrangement.

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

SADARM, December 31, 1995

7a. (U) Program Highlights (Cont'd):

Due to testing issues, the planned FY 93 155mm Procurement Start was delayed. Due to affordability, the MLRS Production Start was delayed by one year to FY 95, and quantities were reduced during the FY 95 through FY 99 timeframe. In addition, the basic MLRS rocket production was not funded during this timeframe. This caused an increase to the total procurement cost of the MLRS SADARM in excess of the 5% Acquisition Program Baseline (APB) threshold.

In July 1993, although there were 9 direct hits from 21 155mm SADARM projectiles fired, the performance phase of Technical Testing was halted before completion due to submunition reliability being less than anticipated. An independent Failure Analysis team was chartered by the Program Executive Officer (PEO) to investigate the reliability problem. The team concluded that all problems were solvable, potential fixes were identified, and that additional testing was required to prove out the fixes and provide confidence to meet reliability objectives. On 2 September 1993, the Army staff approved a program restructure to provide corrective actions, increase reliability, and resume technical and operational testing. The FY 94 Congressional Language for the Defense Budget significantly impacted the SADARM program. The DoD Appropriations Language for 1994 directed that the SADARM program should be terminated in FY 94, and provided \$28.5M for termination. Subsequently, the National Defense Authorization Act for FY 94 provided \$28.5M to maintain the SADARM program in a "standby status" while the Army conducted additional analyses of the program, and provide a report to the Congressional Defense Committees on the results by May 1994. On 2 December 1993, the DA Office of the General Counsel determined that since Congress had not legislatively directed the Army to terminate the SADARM program, the Army could expend \$28.5M in FY 94 RDT&E to carry out committee-recommended analyses and re-evaluations of the SADARM program. In the meantime, significant progress was made in identifying appropriate fixes to improve reliability and eliminate duds. To accommodate the FY 94 funding constraints, significant program reductions were made from the Army-approved plan. All work on the MLRS SADARM was discontinued. Only those corrective actions that could be accomplished within the appropriated amount were undertaken on a priority basis, with system testing of the corrective actions planned prior to the May 1994 report date requested by Congress.

In April 1994, thirteen 155mm SADARM projectiles were fired at the ORD-required range of fifteen kilometers to determine if the corrective actions implemented were successful. There were eleven direct hits and no duds. The performance exceeded the ORD requirements for entering Low Rate Production (LRP) by 25%. The test

\*\*\* UNCLASSIFIED \*\*\*

SADARM, December 31, 1995

7a. (U) Program Highlights (Cont'd):

results were provided to Congress in May 1994. In October 1994, Congress approved an emergency reprogramming of \$13.6M to restart the EMD effort to implement and test the remaining corrective actions for problems which occurred only at the longest ranges. The FY 95 Appropriations Act provided sufficient funds for EMD in FY 95 as well as for a FY 95 procurement start for the 155mm SADARM. Fuze, Safe, & ARM (FSA) testing in November 1994 confirmed that the fixes to that subsystem were successful with 52 for 52 FSAs functioning correctly at the temperature and range extremes. Corrective actions for the submunition to submunition collisions were identified and a number of tests were conducted. No further collisions have been observed. All corrective actions will be fully implemented and tested prior to deliveries of the FY 95 quantities.

The FY 96 President's Budget did not provide funds for the MLRS SADARM. It should be noted that demonstration of SADARM integration into the MLRS Rocket was virtually complete when it was terminated. Reporting on the MLRS SADARM Rocket has been discontinued. The 155mm projectile quantity was increased from 39018 to 73612 in accordance with the Cost and Operational Effectiveness Analysis (COEA) for a 155mm only program. Increasing the quantity of 155mm SADARMS resulted in a Total Procurement Cost breach. The loss of the MLRS SADARM coproduction resulted in a higher unit cost for the 155mm SADARM.

The Defense Acquisition Board (DAB) approved 155mm SADARM LRP on 30 March 1995. The Acquisition Decision Memorandum (ADM) of 4 April 1995 also approved a SADARM Product Improvement (PI) program.

b. (U) Significant Developments Since Last Report --

The Army reprogrammed \$5M into FY 95 Procurement reinstating the funding and quantities to their level prior to the cut imposed by non-prejudicial FY 95 Joint Appropriations Committee Language.

The Low Rate Production contract was awarded to Aerojet in April 1995.

The recognized problem of submunition to submunition collisions, which occurred during high zone firings after ejection from the projectile, was solved before the March 1995 Defense Acquisition Board (DAB), but the fix had not been fully proven out. From April 1995 to October 1995, three test series were conducted. A total of sixteen projectiles were fired at the highest zone (zone 8S); all rounds spun up and reached full range with no evidence of collisions.

Margin testing was conducted in November 1995. Six projectiles, fired at conditions in excess of the maximum gun launch environment,

\*\*\* UNCLASSIFIED \*\*\*

SADARM, December 31, 1995

7b. (U) Program Highlights (Cont'd):

demonstrated that the submunitions will function reliably at high zones.

The SADARM Product Improvement (PI) program was funded in accordance with the Acquisition Decision Memorandum (ADM) dated 4 April 1995. It is expected to increase effectiveness and decrease unit cost. This has caused an increase to the total RDT&E costs in excess of 15% causing an Acquisition Program Baseline (APB) breach when comparing it to only the costs allocated to the 155mm Projectile portion of the SADARM program. The effect on Total Procurement Costs will be reflected in the APB submitted for milestone III when better data will be available to assess both cost and effectiveness.

The SADARM system is expected to satisfy mission requirements.

c. (U) Changes Since As Of Date -- None.

8. (U) Threshold Breaches:

There is a RDT&E breach in excess of 15% to the APB dated 5 April 1995. A Program Deviation Report and APB change request were submitted on 6 March 1996.

There are no Nunn-McCurdy Unit Cost breaches.

9. (U) Schedule:

b. (U) Previous Change Explanations --

The Congressional Demonstration End was rescheduled from April 1989 to July 1989 because of a longer than expected test, fix, and retest process. The remaining development program was restructured to reduce excessive test schedule risk. DA Approval of a 48-month Acquisition Plan was changed from April 1986 to N/A. It was deleted from the 6 September 1991 APB. The 155mm Tech Test Start changed from August 1991 to July 1991 to reflect the actual date of accomplishment.

The following milestones were changed as a result of extending the EMD program by one year. The Under Secretary of Defense for Acquisition (USD(A)) approved the changes in his memorandum of December 1992. Tech Test Complete was changed from NOV 92 to JUL 93. Milestone IIIa was changed from MAR 93 to SEP 93. IOT&E Start was changed from JUL 93 to OCT 93. LRIP Contract Award was changed from APR 93 to NOV 93. IOT&E Complete was changed from OCT 93 to JUL 94. Milestone III DAB - 155mm & MLRS was changed from JUN 94 to JUN 95. Full Scale Production Award was changed from JUN 94 to OCT 95. IOC/First Unit Equipped was changed from JUL 94 to SEP 95.

The following milestones were changed in 1993 because of the submunition reliability problem. Tech Test Complete was changed

\*\*\* UNCLASSIFIED \*\*\*

SADARM, December 31, 1995

9b. (U) Schedule (Cont'd):

from JUL 93 to AUG 95. Milestone IIIa was changed from SEP 93 to DEC 95. LRIP Contract Award was changed from NOV 93 to FEB 96. IOT&E Start was changed from OCT 93 to JUL 96. IOT&E Complete was changed from JUL 94 to DEC 96. Milestone III DAB - 155mm & MLRS was changed from JUN 95 to SEP 97. Full Scale Production Award was changed from OCT 95 to DEC 97. IOC/First Unit Equipped was changed from SEP 95 to MAR 98.

As a result of restarting the EMD program with a FY 95 production start and four year Low Rate Production (LRP) acquisition strategy, the following milestones were changed: 155mm SADARM Tech Tests, Complete was changed from AUG 95 to FEB 96; Milestone IIIa-155mm SADARM was changed from DEC 95 to MAR 95; 155mm LRIP Contract Award was changed from FEB 96 to APR 95; 155mm SADARM IOT&E Start was changed from JUL 96 to JUN 98; 155mm SADARM IOT&E Complete was changed from DEC 96 to JUL 98; Milestone III (DAB) was changed from SEP 97 to DEC 98; 155mm SADARM Full Rate Production Award was changed from DEC 97 to JAN 99; and IOC/First Unit Equipped-155mm SADARM was changed from MAR 98 to JUL 99. The following milestones were added: LRP First Delivery, OCT 96; and Organic Support Capability, JUL 99.

c. (U) Current Change Explanations --

(Ch-1) The current estimate for Tech Test Complete was changed from Feb 96 to Apr 96 due to longer than anticipated time to finish corrective actions.

b. (U) Previous Change Explanations --

RD&E

Economic: Revised escalation indices.

Schedule: Schedule adjusted to reduce test schedule risk and allow additional time for test-fix-test of complete tactical rounds.

Estimating: Program restructured to include two submunition sizes and changed acquisition strategy to a Joint Venture. Reallocated common submunition development costs between 155mm and MLRS due to production quantity changes. FY93 Procurement funding was converted to RD&E to allow additional time for test-analyze-fix-test of complete tactical rounds. Additional FY94 funding was provided to

\*\*\* UNCLASSIFIED \*\*\*

SADARM, December 31, 1995

13b. (U) Cost Variance Analysis (Cont'd):

reinstate the E&MD program as a 155mm SADARM only program.

Procurement

Economic: Revised escalation indices.  
 Quantity: Addition of FY95-FY02 quantities (+53,230)  
 Reduction in quantities by 24,368 to 39,018.  
 Additional quantity of 34,514 units due to termination of MLRS SADARM Rocket.  
 Schedule: Schedule adjustment related to ammended FY90/91 President's Budget. Delay production start due to RDT&E schedule change to allow additional time for test-fix-test of complete tactical rounds, and stretch to accomodate funding limitations. Procurement schedule extended to 18 years to accomodate additional quantity and budgetary limitations.  
 Estimating: Added costs to fund Process & Reliability Enhancement (PRE), and reduced submunition unit costs due to PRE savings. Revised estimated costs due to Prime/Sub Acquisition Strategy and results of fixes to EMD problems. Increased unit costs due to loss of MLRS SADARM Rocket coproduction.  
 Support: Increased data costs due to increased quantity. Additional pallet costs due to increased quantity.

Explanation of Change:

The contract was rebaselined in April 1995.

All work on the MLRS SADARM has been discontinued. The remaining work involves repeating 155mm system testing to verify that all corrective actions were successful.

This contract applies to the 155mm SADARM and the MLRS SADARM EMD. It includes the sunk costs for the MLRS SADARM. All work on the MLRS SADARM has been discontinued in FY 94.

Expenditures and obligations reflect program office estimates as of 31 December, 1995.

Due to commonality, the RDT&E costs for submunitions for the 155mm Projectile and MLRS Rocket have been allocated to each system based on the total quantity of submunitions to be procured for each end item. All MLRS SADARM Rocket efforts have been terminated. The following table shows the sunk RDT&E costs allocated to the MLRS SADARM Rocket:

|      |          |        |
|------|----------|--------|
| FY   | BY89 \$M | TY \$M |
| 1986 | 34.3     | 31.7   |

a. (U) Deliveries to Date --

RDT&E

Procurement

Plan/Actual

707/707

0/0

b. (U) Approved Design-to-Cost Objective -- N/A.

There is no current Design - To - Cost goal.

18. (U) Operating and Support Costs:

a. (U) Assumptions and Ground Rules --

The 155mm SADARM munitions are considered "wooden rounds" and have no operational costs. The only O&S costs are for depot storage and stockpile testing. There is no antecedent.

b. (U) Costs -- None.

Average annual cost is \$35 per 155mm SADARM per year for depot storage.

*1156 Don R. Rucker*

\*\*\* UNCLASSIFIED \*\*\*

FMTV, December 31, 1995

**6. Mission and Description (Cont'd):**

Vehicle (MTV) has a 5 ton capacity and consists of cargo, tractor, van, wrecker, tanker and dump truck models. Subvariants provide Low Velocity Air Drop (LVAD) capability for contingency and rapid deployment operations. Commonality between variants significantly reduces operational and maintenance costs. The program's Joint Service Operational Requirement "JSOR" document also requires complimentary 2 1/2 ton and 5 ton tactical trailers incorporating off-road performance capability and cargo bed size, common with the LMTV and MTV cargo trucks. FMTV, intended to replace obsolete and maintenance-intensive trucks currently in the fleet, performs local and line haul, unit mobility, unit resupply, and other missions in combat, combat support, and combat service support units.

The FMTV is required to fill the 2-1/2 ton truck (LMTV) and 5 ton truck (MTV) requirements, reduce significant operating and support costs, resolve operational deficiencies and operate through the theater as multi-purpose transportation vehicles used by combat, combat support, and combat service support units. The system is designed to be rapidly deployable worldwide and operate on primary and secondary roads, trails, and cross-country terrain. The vehicles operate in all climatic conditions.

**7. Program Highlights:**

a. Significant Historical Developments --  
The Family of Medium Tactical Vehicles (FMTV) Program, Operational and Organizational Plan was approved in September 1984. The User Requirement Document (JSOR) was established on 1 May 1986, and subsequently, the Army Cost and Operational Effectiveness Analysis (COEA) justified the program initiation on 4 June 1987. The FMTV Army Systems Acquisition Review Council (ASARC) approval was obtained on 5 August 1987, with further program approval from the Defense Acquisition Board (DAB) on 23 May 1988, which led to the prototype contracts being awarded on 21 October 1988.

The December 1988 SAR represented a procurement program of 15 years. As a result of competing Army priorities, the December 1989 SAR reflected the current 30 year procurement program. The FMTV ASARC IIIA milestone review was completed in September 1991, and granted approval to proceed to Low Rate Initial Production. The FMTV production contract was awarded to Stewart & Stevenson Services Inc. of Houston, TX on 11 October 1991. This was a five-year multiyear fixed price contract with an escalation clause which procures 10,843 trucks and includes option provisions. The new production facility is located in Sealy, TX.

In March 1992, the FMTV program was selected by Congress as part of the "Mentor-Protege" program to develop Small and Disadvantaged

FMTV, December 31, 1995

7a. Program Highlights (Cont'd):

Businesses as qualified subcontractors. A sole-source R&D contract was awarded to Stewart & Stevenson on 30 September 1992 to build and test hardware, as well as develop the drawing package for the deferred fuel tanker, expansible van, and trailers. These models will be incorporated into the competitive FMTV rebuy solicitation. On 25 June 1993 the FMTV Rollout ceremony was conducted at the Sealy, Texas production facility.

The Acquisition Program Baseline (APB) was approved on 07 March 1995 reflecting the schedule changes which breached the APB dated 12 May 1993 and were reported in the September 1994 quarterly exception SAR. The ASARC IIIB for Full Rate Production and Type Classification Standard was approved in August 1995, and the production APB was approved on 11 September 1995.

b. Significant Developments Since Last Report --  
The FMTV system is expected to satisfy mission requirements.

c. Changes Since As Of Date --  
FMTV First Unit Equipped (FUE) occurred at Ft. Bragg on 29 January 1996 based on Conditional Materiel Release approval.

8. Threshold Breaches:

There are no breaches to the approved Acquisition Program Baseline (APB) dated 11 September 1995. There are no Nunn-McCurdy unit cost breaches.

9. Schedule:

MMBHMf - Mean Miles Between Hardware Mission Failure

MMBOMF - Mean Miles Between Operational Mission Failure

MMHPOM - Maintenance Man Hour/Operating Mile

GVW - Gross Vehicle Weight

GCW - Gross Combined Weight

NOTE: Demonstrated Performance values are the results of IOT&E testing in accordance with the approved TEMP at the time of testing dated March 1995. Definitions for calculating this data are IAW Section 3.3.b.(3) of the TEMP which states that "Crew maintenance man-hours are not included in the maintainability parameters." Also, the FMTV RAM Rationale Report states in Section 8, RAM

\*\*\* UNCLASSIFIED \*\*\*

FMTV, December 31, 1995

10a. Performance Characteristics (Cont'd):

Parameters that the Maintenance Ratio for Unit is equal to the Total Maintenance man-hours divided by total miles. Total Unit maintenance man-hours equals the sum of the scheduled and unscheduled man-hours of maintenance performed by the unit maintenance personnel. The daily checks and services are excluded provided they do not exceed 30 minutes per day.

Both OPTEC and DOT&E have identified scored data with different results than that of the PM, which was developed by AMSAA and approved at Milestone III, Full Rate Production Decision on September 11, 1995.

b. Previous Change Explanations -- None.

c. Current Change Explanations -- None.

FMTV, December 31, 1995

18a. Operating and Support Costs (Cont'd):

a. Assumptions and Ground Rules --

The average miles/vehicle/year for the LMTV truck is 3,371 miles; the MTV truck is 6,006 miles; the LMTV trailer is 1,725 miles; the MTV trailer is 3,000 miles. The average years of operation (useful life) is 20 years. The dedicated crew/vehicle/year for LMTV trucks is .1 annual manyears per vehicle; for MTV trucks is .25 annual manyears per vehicle. Dedicated crew is not applicable for trailers.

b. Costs -- (FY 1996 Constant (Base-Year) Dollars in Thousands)

PLS (FHTV), December 31, 1995

**6. Mission and Description:**

The Palletized Load System (PLS) program is comprised of a 16.5 ton tactical truck with trailer and flatracks (dismountable cargo beds). The PLS employs the maximum practical use of commercial components. Each truck/trailer combination is provided with a common flatrack. The PLS trailer has a cargo capacity equal to that of the prime mover. The PLS program accommodates two mission oriented configurations: with and without a material handling crane, and kit applications in order to satisfy currently existing individual Army ground transportation requirements in the specified payload range. Flatrack interoperability with the equipment of European forces is a requirement. The PLS is a key transportation component of the Maneuver Oriented Ammunition Distribution System (MOADS) in support of the field artillery.

**7. Program Highlights:**

**a. Significant Historical Developments --**

The PLS program conducted a successful Organizational/Operational conceptual evaluation at Ft. Lewis, WA in 1984. Force Development Test and Experimentation was conducted in late 1986 at Ft. Hood, TX. Following this success, the Army Systems Acquisition Review Council (ASARC) approved the program in May 1987. Congressional guidance stipulated that the program receive Non-Developmental Item (NDI) determination, that manufacture and assembly occur in the USA, and that authority for source selection would be vested in the Department of the Navy. The Request for Proposal for the prototype phase was released to three competing contractors in November 1988, and three contracts were awarded in January 1989. The contractors receiving awards were GM-MVO, Oshkosh Truck Corporation and PACCAR Government Group. A formal request was made of Congress in July 1989 for an extension to the original December 1989 deadline for selection of the production source until June 1990. This extension was approved in the FY90/91 Defense Authorization Act. The first prototype vehicle was delivered in August 1989, and testing proceeded on schedule.

A Memorandum of Understanding has been executed with Great Britain, France, and Germany to ensure interoperability of PLS flatracks with their comparable systems. Technical data has been exchanged between the parties to define the necessary interfaces. The British flatrack was successfully tested on the U.S. PLS during the prototype phase. The German and French flatracks will be evaluated when available.

On 10 September 1990 the Milestone IIIA Defense Acquisition Board (DAB) approved PLS for Low Rate Initial Production (LRIP). In July 1990, Oshkosh Truck Corp. was selected as the apparent successful bidder for the PLS solicitation. A five-year multiyear contract was awarded to Oshkosh on 28 September 1990. A quarterly exception SAR was submitted for 30 September 1990 to report Nunn-McCurdy breaches

\*\*\* UNCLASSIFIED \*\*\*

PLS (FHTV), December 31, 1995

7a. Program Highlights (Cont'd):

in accordance with public law. The Secretary of the Army notified Congress on 13 November 1990 that breaches had occurred in both Current Procurement Unit Cost (CPUC) for trucks, trailers and flatracks, and the Program Acquisition Unit Cost (PAUC) for trailers and flatracks, as a result of repricing the reduced program quantities with the prices from the contract. Secretary of Defense certification was submitted to Congress on 13 December 1990. The Acquisition Program Baseline (APB) dated 31 October 1990, was approved and established costs in FY91 Base Year Dollars (previous base year was FY89). Oshkosh Truck Corp. applied to the Internal Revenue Service for and received exemption from Federal Retail Excise Tax (FRET) due to its off-road tactical mission. An enhanced flatrack program was incorporated into current production, as directed by Congress. This will enhance sealift capability. The Test and Evaluation Master Plan (TEMP) was approved by OSD (Dir of Op Test & Eval) in November 1991. On 14 December 1992, the PLS ASARC was successfully conducted for the Milestone III Decision. The Acquisition Decision Memorandum (ADM) was signed on 16 December 1992 authorizing full rate production with conditional Type Classification Standard, subject to submission of the Beyond Low Rate Initial Production (LRIP) Report to Congress. The Production Acquisition Program Baseline (APB) for PLS was approved on 28 December 1992.

The Beyond Low Rate Initial Production (LRIP) Report was sent to Congress on 30 April 1993, allowing award of the 4th Program Year call-up on 30 April 1993. The PLS Enhanced Flatrack completed and passed Conventional Systems Committee (CSC) certification in October 1993. On 3 November 1993 the Army Acquisition Executive approved Type Classification-Standard for the PLS. On 11 December 1993, final transportability testing was completed by successfully passing the C-141 aircraft loading.

Full AR 700-34 release was approved by the Commander, Army Materiel Command (AMC) on 31 January 1994. First Unit Equipped (Ft. Hood, TX) was accomplished on 9 February 1994 and Initial Operating Capability was achieved on 11 February 1994. Oshkosh Truck Corp. was awarded the contract to produce 5000 enhanced flatracks in September 1994.

The PLS is expected to satisfy mission requirements.

b. Significant Developments Since Last Report --

A total of 2363 trucks, 1059 trailers have been fielded through 31 December 1995. This represents 87% and 75% contract completion respectively. Fieldings were conducted in Germany (51st Medium Truck Company), Ft. Campbell, Ft. Irwin, Ft. Eustis, Ft. Riley, Ft. Drum and Ft. Bragg. Selected National Guard sites have also been fielded.

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

PLS (FHTV), December 31, 1995

**7b. Program Highlights (Cont'd):**

Flatracks have been damaged in Europe when used to carry M113 vehicles. Units were advised not to load any vehicles on flatracks pending receipt of upgraded flatracks designed for this use.

In June 1995 a solicitation was released to acquire 3,000 PLS M2 flatracks, separate from the PLS multiyear contract. This was pursued as a competitive Small and Disadvantaged Business (SDB) set aside.

**c. Changes Since As Of Date --**

As a result of a contract appeal ruling, the M2 flatrack award to Steeltech was overturned due to their ineligibility as a Small and Disadvantaged Business (SDB) concern. The contract award planned for January 1996 was delayed by protest, and contract award to a new vendor is scheduled for March 1996.

In support of the Army requirements for Bosnia, 54 Personnel Protection Kits (armor) are being jointly delivered by TARDEC and the PM Office for the PLS. In country delivery is anticipated for May 1996.

**8. Threshold Breaches:**

There are no breaches to the Approved Acquisition Program Baseline (APB) dated 28 December 1992 and there are no Nunn-McCurdy unit cost breaches.

**9. Schedule:**

b. Previous Change Explanations --

Shakedown Test was delayed and expanded, which also caused changes to subsequent milestones. The FSD Development Testing was reduced to a three week test ending in September 1989. Schedule changes for IOT&E, Milestone IIIB and FUE/IOC reflected the Milestone III Decision APB dated 28 December 1992. Schedule changes for completion of transportability testing and the subsequent materiel release process caused the FUE date to change from August 1993 to February 1994 and IOC to change from September 1993 to March 1994. However, IOC was actually achieved on 11 February 1994 at Ft. Hood, TX.

c. Current Change Explanations -- None.

MMHPOM - Maintenance Man Hour/Operating Mile  
MMHPOH - Maintenance Man Hour/Operating Hour  
GVW - Gross Vehicle Weight  
GCW - Gross Combined Weight  
MHC - Materiel Handling Crane

NOTE: There is a difference of opinion between the reliability (Demonstrated Performance) values approved by the ASARC at Milestone III, Full Rate Decision and that which was developed by DOT&E. DOT&E has evaluated PLS as unsuitable. This is due primarily to a long standing disagreement between Army and DOT&E on failure mode definitions from IOT&E and consequent differences of opinion on PLS reliability. There is currently an agreement between DOT&E and the Army that the Army will utilize sample data collection in Bosnia, Hungary, Germany and/or at the NTC in lieu of follow-on testing.

b. Previous Change Explanations --

Initial changes to the performance data (Fording Capability, Reliability for MHC, Mobility for truck with MHC and truck without MHC) result from the Milestone IIIB Decision on 28 December 1992.

All other changes to the performance data are due to final IOT&E test scoring results. All Current Estimates reflect the improvements shown in final Demonstrated Performance. Highway speed on 2% grade at GVW was 50/45 and is now 50; highway speed on 2% grade at GCW was 35/30 and improved to 38; operating range improved from 225 miles to 266 miles. Reliability for trucks (MMBHMf) was 2250 and improved to 3734; trucks (MMBOMf) was 1500 and improved to 2703; trailers (MMBHMf) was 2280 and improved to 11998; trailers (MMBOMf) was 1900 and improved to 6857; MHC (MMBHMf) was 195 and improved to 432; MHC (MHBOMf) was 150 and improved to 384. The Maintenance ratio for trucks (operational) was 0.015 and improved to 0.013; trailers (operational) was 0.005 and improved to 0.002; trailers (technical) was 0.004 and improved to 0.002; MHC (operational) was 0.100 and

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

PLS (FHTV), December 31, 1995

10b. Performance Characteristics (Cont'd):

improved to 0.059; MHC (technical) was 0.083 and improved to 0.059; Mobility for truck with MHC was 36 and improved to 33; truck without MHC was 34 and improved to 33; truck & trailer combination was 50 and improved to 39.

c. Current Change Explanations --

(Ch-1) Demonstrated Performance and Current Estimate values have been updated to reflect assessed scoring. The MMBOMF for Trailer was 6857 and is now 7835; MMHPOM for truck was 0.013 and is now 0.014; trailer was 0.002 and is now 0.005; MHC was 0.059 and is now 0.054.

Note: Excludes 27 RDTE prototypes from the SAR Baseline and 27 from the Current Estimate that are not considered fully configured.

The LRIP was approved in September 1990 for 504 trucks and was based on production not to exceed 30 per month prior to IOT&E approval.

c. Foreign Military Sales/International Cooperative Programs -- Although PLS is not an International Cooperative Program in the formal sense, a Memorandum of Understanding has been made with Great Britain, Germany, and France to ensure interoperability of PLS flatracks with their comparable systems.

d. Nuclear Costs -- None.

b. Previous Change Explanations --

RDT&E

Engineering: Fabricate/test engineering equipment for Heavy Repair Vehicle and flatrack.

Estimating: Funding for FMTV testing.

Procurement

Economic: Revised escalation indices.

Quantity: Reduced trucks from 3386 to 2691, trailers from 1645 to 1311 and flatracks from 46461 to 13874.

Estimating: Revised estimate for Enhanced Flatracks quantity change. Revised estimate for ECOs.

Support: Revised test requirements.

| \$82.5                        | N/A            | 5000       | \$82.5                               | \$82.5                 |  |

Explanation of Change:

Cost and Schedule variance reporting is not required on this FFP contract.

The initial contract quantity of 14,706 reflected the total basic contract for trucks, trailers and flatracks on the five-year multiyear contract. The contract cost and quantity were modified so that certain flatracks are procured under a new contract with Oshkosh Truck Corp., and the original contract was reduced in price and quantity to reflect the reduced number of flatracks.

Expenditures and obligations are as of 29 February 1996.

Fiscal Years 1995 through 2001 show recurring flyaway costs and no quantity for truck procurement. These years reflect trailer and flatrack procurement. Quantities for trucks, trailers and flatracks are:

|      | Trucks | Trailers | Flatracks |
|------|--------|----------|-----------|
| 1990 | 81     | 126      | 339       |

16c. Program Funding Summary (Cont'd):

|       | Trucks | Trailers | Flatracks |
|-------|--------|----------|-----------|
| 1998  | 0      | 0        | 800       |
| 1999  | 0      | 0        | 828       |
| 2000  | 0      | 0        | 1792      |
| 2001  | 0      | 0        | 5926      |
| Total | 2857   | 1461     | 33288     |

17. Production Rate Data:

a. Deliveries to Date --

|             | <u>Plan/Actual</u> |
|-------------|--------------------|
| RDT&E       | 27/27              |
| Procurement | 2443/2443          |

RDT&E deliveries are complete (27 trucks, 18 trailers and 90 flatracks). Procurement deliveries are as of 1 March 1996.

b. Approved Design-to-Cost Objective -- N/A.

18. Operating and Support Costs:

a. Assumptions and Ground Rules --

The average miles per vehicle year for the PLS with crane with winch is 3,000 miles; the PLS with crane without winch is 3,000 miles; the PLS without crane without winch is 4,900 miles; the trailer is 4,900 miles. The average Years of Operation (Useful Life) is 20 years. The dedicated Crew/Vehicle/Year for PLS trucks is 2.03 manyear/vehicle/year. There are no separately estimated Operating and Support Costs for flatracks. The Baseline Cost Estimate dated September 1992 is the source of the costs in section 18 b.

JSOW (AIWS), December 31, 1995

4. (U) Program Elements/Procurement Line Items (Cont'd):

PROCUREMENT:

APFN 1507 ICN 223000 (Navy)

APFN 3020 ICN 1234 (Air Force)

MILCON:

PE 1205NCN (Shared)

5. (U) Related Programs:

F/A-18 aircraft and Tactical Aircraft Mission Planning System (TAMPS).

6. (U) Mission and Description:

The JSOW is an air-to-ground weapon designed to attack a variety of targets during day, night, and adverse weather conditions. JSOW will enhance aircraft survivability as compared to current interdiction weapon systems by providing the capability for launch aircraft to standoff outside the range of most target area surface-to-air threat systems. The JSOW Global Positioning System (GPS)/Inertial Navigation System (INS) capability will allow several target kills per aircraft sortie. The Navy will integrate the JSOW onto the F/A-18 and AV-8B aircraft, and the Air Force will integrate the JSOW onto the F-16 C/D, F-15E and bomber aircraft. A main focus of the JSOW development has been high payoff, low risk, low cost engineering solutions to effectively achieve both operational requirements and a low unit procurement cost. The program objective is to obtain an ample inventory of precision standoff weapons for use against the numerous, yet tactically significant targets which must be attacked in any conflict.

7. (U) Program Highlights:

a. (U) Significant Historical Developments --

The original Acquisition Plan (AP), AP-88-21, was approved on 1 July 1988. The JSOW program was reviewed by the Defense Acquisition Board (DAB) on 5 June 1989 and an Acquisition Decision Memorandum (ADM) dated 29 June 1989 granted Milestone I approval to enter an 18 month Demonstration/Validation (DEM/VAL) phase for the JSOW Baseline program and directed the Navy to develop a plan for P3I. The JSOW Baseline program completed DEM/VAL in July 1991 and the Source Selection process in December 1991. JSOW successfully completed a MS II DAB on 8 June 1992. The ADM directed commencement of the Engineering and Manufacturing Development (ESMD) Phase. It also changed the name of the program from Advanced Interdiction Weapon System (AIWS) to Joint Standoff Weapon (JSOW). In June 92 a contract was awarded to Texas Instruments (TI) for the JSOW Baseline ESMD effort. A successful Preliminary Design Review was completed on April 26, 1993. The EMD contract Subsequent Application Review (SAR) at Texas Instruments was successfully completed on September 24, 1993. On November 19, 1993, Airworthiness testing commenced with a

\*\*\* UNCLASSIFIED \*\*\*

JSOW (AIWS), December 31, 1995

7a. (U) Program Highlights (Cont'd):

successful flutter flight test. The initial captive carriage testing was performed at Patuxent River, MD with a F/A-18 loadout which included four (4) JSOW Structural Test Vehicles (STV-C1 through C3 and STV-D).

On October 28, 1994, OSD Program Decision Memorandum Number Two (PDM #2) directed the USAF to plan on inventory quantities of 3,000 JSOW Baseline and 3,000 JSOW/BLU-108 weapons. The JSOW continued to perform the test program requirements with the F/A-18 aircraft on, or above expectation. In December 1994, the JSOW successfully completed the final DT-IIA Airworthiness Jettison test and accomplished a major program milestone with the first STV-F weapon free flight.

b. (U) Significant Developments Since Last Report --  
In April 95, the JSOW Program received Defense Acquisition Board (DAB) approval for the Unitary Variant and BLU-108 programs to enter Milestone II. The Baseline (ACM-154A) Acquisition Program Baseline (APB) revision included the addition of the Unitary Variant and BLU-108 programs. The following represents the significant developments of the past year for each JSOW variant.

**BASELINE VARIANT**

The Baseline DT-IIA test program on the F/A-18 aircraft demonstrated continued success by completing the final test in February 95.

In March 95, the Baseline E&MD contract Critical Design Review (CDR) was held at Texas Instruments (TI).

The DT-IIB test phase was conducted from March 95 through December 95. Overall results were successful and will allow the program to proceed into the next phase of testing, DT-IIC. The following table describes the highlights of the DT-IIB test phase.

| EVENT   | DATE   | RESULT  | COMMENTS                         |
|---------|--------|---------|----------------------------------|
| ADM-B1  | Mar 95 | Success | Max range demonstrated           |
| ADM-B2  | May 95 | Failure | Wings failed to deploy           |
| ADM-B2a | Jun 95 | Success | First dispense                   |
| ADM-B4  | Jul 95 | Success | Full interface F-18 OFP and JSOW |
| ADM-B7  | Aug 95 | Success | Off-axis, long range             |
| ADM-B6  | Sep 95 | Abort   | Fin unlocked prior to launch     |
|         | Oct 95 | Success | Off-axis, low altitude           |
| ADM-B8  | Oct 95 | No Test | FTS engaged at launch            |
| ADM-B3  | Nov 95 | Success | Low altitude, mid velocity       |

- 3 -

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

JSOW (AIWS), December 31, 1995

7b. (U) Program Highlights (Cont'd):

|         |        |         |                                     |
|---------|--------|---------|-------------------------------------|
| ADM-B10 | Dec 95 | Success | High altitude target, high velocity |
| ADM-B8a | Dec 95 | Success | 3D waypoints, off-axis              |

This successful completion of the DT-IIB test phase sets the stage for the JSOW program to accelerate into the new year with the confidence, maturity and proven performance that will ensure similar program successes.

All objectives of the initial Functional Configuration Audit (FCA) were satisfied by a series of incremental compliance reviews from late July through early December 1995. Each initial FCA requirement was assessed by the appropriate government Integrated Product Team development leader and their Texas Instruments counterpart.

All objectives of the Production Verification Review were satisfied by:

- A series of design reviews (STV-F, ADM, EDM and CDR)
- Active Failure Review Board and configuration management processes
- Continued concurrent engineering efforts evidenced from the onset of the E&MD contract
- Utilization of production representative processes during the test program hardware builds/integration.

**BLU-108 VARIANT**

The E&MD contract for JSOW/BLU-108 variant was awarded on 30 June 1995 and completed an Integrated Baseline Review for the E&MD contract. The November 1995 review captured the results of a four month effort in which Government and Contractor product team members:

- Restructured old product team organization to establish new, joint service, E&MD product team organization
- Embraced latest DoD acquisition streamlining initiatives to provide program cost avoidance and preserve schedule
- Developed a program measurement baseline that accounts for synergy between the JSOW Baseline and JSOW/BLU-108 development efforts.

This effort provided insights into the development of program costs and schedules and increased program confidence in the identification of any remaining risks to the program.

All objectives of the BLU-108 Preliminary Design Review (PDR) were satisfied by a series of in-process reviews during the months of September and October 1995. No Critical Requests for Action were

- 4 -

7b. (U) Program Highlights (Cont'd):

necessary. The success of the PDR attests to the maturity of the dispenser design and the readiness of JSOW/BLU-108 to proceed into it's development test phase.

UNITARY VARIANT

The Unitary E&MD contract was awarded on 30 August 1995.

The Unitary Integrated Guidance Simulation, up and running in December 1995, will be used by Fleet Operators to evaluate Man-in-the-loop scenarios at the Warrior Product Team in January and will be used to evaluate system effectiveness and develop system specifications.

The JSOW Unitary Systems Requirements Review (SRR) is planned for March 1996.

A Critical Process Review (CPR) is scheduled for late April 1996. This review is for the Program Executive Officer (PEO) to assess the overall status of the program. The contractor will present the status of design reviews, cost performance, schedule performance and risk status.

The JSOW system will satisfy mission requirements.

c. (U) Changes Since As Of Date --  
The Integrated Baseline Review for the Unitary E&MD was held in January 1996. This review established the contractor E&MD development program cost and schedule baseline.

8. (U) Threshold Breaches:  
There are no breaches to the Acquisition Program Baseline Agreement dated 26 April 1995. There are no Nunn-McCurdy unit cost breaches.

9. (U) Schedule:  
Baseline/BLU-108

| a. (U) Milestones --                         | Development<br><u>Estimate</u> | Approved<br><u>Program</u> | Current<br><u>Estimate</u> |

b. (U) Previous Change Explanations --

(MSII & ESMD Contract Award) Program experienced a 3 month slip due to administrative delays in reaching a MS II DAB.

(PDR, FCA, FVR, PRR, LRIP option & first delivery, OPEVAL start & complete, O & I level support) A two month schedule delay adjustment based upon Preliminary Design Review (PDR) being held in January 1993. PDR was delayed two months due to administrative delays.

(IOT&E OTILA & TECHEVAL DTIC) Schedule acceleration (start dates from Dec 95 to Oct 95) and complete dates 1 month delay (from Jul 96 to Aug 96) based upon ESMD contract award 26 June 1992.

(b)(1)

(CDR) A four month schedule delay adjustment (from Dec 94 to Apr 95) due to a combination of the month delay based on the PDR, and an additional two month delay due to the ADA software requirement being incorporated into the ESMD contract.

c. (U) Current Change Explanations --

(Ch-1) - Test schedule was adjusted to reflect software delays experienced earlier in the program. Contractor currently meeting software delivery schedule.

(Ch-2) - Reflects actual date of completion.

(Ch-3) - First reporting for this item.

RDT&E

Economic: Adjustment of escalation indices.  
Schedule: Extension of 18 to 25 months DEMVAL; systems engineering and program management required as a result of the extended program schedule.  
Estimating: Additional A/C integration requirements; risk reduction in E&MD; DAB decision on prototyping in DEMVAL; test assets requirement increased from 65 to 102 units. Engineering support efforts rephased due to budgetary reductions in early stage of program. Adjustments for contract FPRA rates, and field technical and testing support. Increase in

13b. (U) Cost Variance Analysis (Cont'd):

Baseline/BLU-108

estimate for contract overhead adjustments and  
realignment for annual fund increments.

Adjustment for current and prior inflation.

Procurement

Economic: Revised escalation indices.  
Economic adjustment for negative program change.  
Quantity: Addition of 3,000 Air Force Baseline units.  
Schedule: Delivery schedule slip. Decreased costs for annual  
procurement buy acceleration.  
Estimating: Refinement of prior estimate. Decrease telemetry  
quantity and system unit price for addition of JSOW  
BLU-108. Addition of nonrecurring costs for the  
3,000 Air Force units, increase in nonrecurring  
costs for additional AUR containers.  
Support: Attributable to hardware delivery schedule.  
Decrease estimate for initial spares. Increase  
requirements for Fleet support. Decreased support  
requirements resulting from schedule acceleration  
and refinement of estimate.

MILCON

Economic: Revised escalation indices.  
Economic adjustment for negative program change.  
Estimating: Deletion of All Up Round (AUR) maintenance/test  
facility requirements.

| \$330.7                | \$0.0          | 0          | \$333.0                       | \$333.0                |

|   | <u>Cost Variance</u> | <u>Schedule Variance</u> |
|---|----------------------|--------------------------|
| Previous Cumulative Variances           | \$-23.4              | \$-5.2                   |
| Cumulative Variances To Date (12/31/95) | \$-23.1              | \$-3.9                   |
| Net Change                              | \$0.3                | \$1.3                    |

Explanation of Change:

The positive net change in cost reflects improvements in non-received material milestones credited since the last SAR. The positive net change in schedule is a direct result of the incorporation of the BLU-108 variant into the reporting system and the replanning of future work efforts.

Cost Variance: Reflects heavy flight test support and related impacts of the DT-IIB testing, recurring engineering overruns due to protracted development efforts, negotiated material price variances on the BLU-97 submunitions and final receipt for the Choctaw Mentor/Protege container efforts.

Schedule Variance: Reflects start-up delays in the build of the BLU 108 items associated with DT&E test equipment and the continual fluctuations in the hardware build and software development plans.

There is no impact to the contract or JSOW program for these variances.

| Cumulative Variances To Date (12/31/95) | \$0.2                | \$-0.4                   |
| Net Change                              | \$0.2                | \$-0.4                   |

Explanation of Change:

Cost Variance: Reflects early completion of scheduled tasks relating to systems engineering.

Schedule Variance: Reflects slip in award and subsequent material delivery of several subcontracts.

There is no impact to the contract of JSOW program for these variances.

5. Related Programs:

AN/SQQ-32 Advanced Minehunting Sonar, AN/SIQ-48 Mine Neutralization System, and AN/SYQ-13 Navigation Command and Control System.

6. Mission and Description:

The MHC 51 Coastal Minehunter Ship class provides the U.S. Navy with state-of-the-art surface minehunting and mine neutralization mission capability which will be employed well into the 21st century. The 57.2 meter long glass reinforced plastic (GRP) ship integrates exceptionally low noise design and utilizes very low magnetic

## 6. Mission and Description (Cont'd):

signature equipment, diesel engines, and cycloidal propulsion. Major payload equipments include the AN/SYG-13 Navigation, Command, and Control System, AN/SQQ-32 Advanced Minehunting Sonar, and a AN/SLO-48 Mine Neutralization System. The MHC class serves as the "low-mix" complement to the larger and deeper water capable Mine Countermeasures (MCM) ship. The MHC class will enable battle group and amphibious operations in harbors, coastal waters, and littoral areas worldwide by clearing acoustic, magnetic, pressure and contact mines from the bottom and surrounding water volume. The MHC can operate in coordinated mission scenarios with both Airborne Mine Countermeasures (AMCM) helicopters and MCM ships.

## 7. Program Highlights:

a. Significant Historical Developments --  
During May 1982, an Operational Requirement (OR) was issued for a "low mix" (smaller mission/shallower water) littoral area minehunter ship to complement the larger ocean going MCM ship. This effort led to the Minesweeper Hunter (MSH-1) class design which used Swedish based "foam core" ship construction technology. Major problems were encountered very early when preliminary strength and shock testing on foam core sectional test panels indicated that major weight and shock problems would materialize and that costly redesign would be necessitated. In view of this, contract effort was terminated in 1986. The Coastal Minehunter (MHC) ship program was initiated to replace the MSH. The MHC design is based on the LERICI Class minesweeper ships designed and built by Italian shipbuilder Intermarine S.p.A. (IMSPA). IMSPA was awarded a contract to modify the LERICI design to meet U.S. Navy mission requirements. Milestone I (Authorization for Contract Design) was approved in June 1986. An MHC Program Endorsement Memo (PEM) for Milestone II (leadship production authorization) was issued by the Ass't Secretary of the Navy, Shipbuilding and Logistics (ASN/S&L) 11 December 1986. The PEM authorized sole source award of the class leadship contract, MHC 51, to Savannah, GA based Intermarine USA (IMUSA). The PEM further directed that a second source shipbuilder be competitively selected. The MHC 51 contract was awarded to IMUSA 5/22/87 and construction began in May 1988. Milestone IIIA (authorization for limited production) was approved by ASN(S&L) during February 1989. The "second source" builder, Avondale Industries, Inc. of New Orleans, LA, was awarded a contract for construction of their first vessel, MHC 53, on 3 October 1989. Milestone IIIB (full rate production) approval was authorized in January 1990. The MHC program force level procurement authorization is 12 ships.

b. Significant Developments Since Last Report --  
PROGRAM DELIVERIES: IMUSA's third and fourth ships, MHCs 55 and 58, were respectively delivered 5/12/95 and 1/16/96. The second source

MHC 51, December 31, 1995

7b. Program Highlights (Cont'd):

builder, Avondale Industries, delivered their first ship, MHC 53, 8/11/95 and their second ship, MHC 54, 2/9/96. As of 2/29/96, six ships, half the MHC program authorization, have been delivered.

**IMUSA CORPORATE STATUS:** As noted in prior SAR submissions, IMUSA experienced extreme losses on their first two ship contracts (MHC 51 and 52). With little entitlement found on most of their claims and no guarantees that sufficient awards would be forthcoming on any of their four U.S. Court of Federal Claims filed lawsuits, the company faced potential bankruptcy during late 1994 and throughout most of 1995. This situation jeopardized delivery of the company's five remaining ships under contract (MHCs 58-62).

With a 12 MHC ship force requirement confirmed, Navy and OSD concern was directed toward developing a means to equitably, legally, and collectively resolve all issues with IMUSA under one agreement. An approach was developed in which a variety of existent issues could be negotiated under one "global settlement." On 4/10/95, IMUSA and the Navy signed a "Scope of Settlement Agreement" which formally defined terms and established pricing for resolution of all pertinent issues set forth in the global settlement proposal. The following main points were covered: Grant Navy full life cycle rights to use IMUSA proprietary Glass Reinforced Plastic (GRP) data and processes; Convert contracts for the last five ships from Fixed Price Incentive (FPI) to Firm Fixed Price (FFP); IMUSA to provide full and final release of all open claims and Requests for Equitable Adjustments (REAs); IMUSA to dismiss four claims (lawsuits) which were pending at the U.S. Court of Federal Claims; IMUSA acknowledges responsibility for all directed source contractor furnished equipment; Placement of a cap on IMUSA's liability for correction of shock related defects; Establish delivery incentives (maximum of \$3.0M per ship) for the last five ships under contract; and, IMUSA to provide full and final release for all events that were known or should have been known at the time the scope of settlement was signed (4/10/95).

Contract modifications invoking agreement terms were signed 12/6/95. During the year leading to the settlement, both IMUSA and the Navy demonstrated good faith effort in assuring that the production effort was maintained despite no guarantees that funding would become available. IMUSA's production pace has improved markedly and their four remaining ships under contract are expected to be delivered within global settlement contract cost and schedule parameters.

**AVONDALE STATUS:** In November 94, Avondale submitted an REA for \$59.7M—the primary basis of which cited impossibility to meet Government's design specifications due to ship space constraints.

MHC 51, December 31, 1995

7b. Program Highlights (Cont'd):

Settlement was reached for \$28.9M and contract modifications were signed 12/28/95. During the past year, Avondale has demonstrated favorable production progress improvement trends. The company is on track toward meeting PM delivery estimates for their two final MHC ships under contract.

**MHC CLASS SHOCK TRIALS:** MHC 51 shock trials were conducted at Aberdeen Proving Grounds in Maryland from 8/22/95 to 9/25/95. The trials entailed 5 successively stronger underwater "shots" which were conducted on the class leadship, MHC 51. The trials successfully demonstrated the objective of evaluating the ship's mission response to underwater explosion induced shock. Shock trial damage repair began during January 96. Comprehensive study of any necessary vessel or equipment system design changes resulting from shock trials will continue through mid-year 1996.

The MHC will satisfy mission requirements.

c. Changes Since As Of Date --  
IMUSA's fourth ship, MHC 58, delivered 1/16/96. Avondale's second ship, MHC 54, delivered 2/9/96. Funding for IMUSA global settlement and Avondale REA coverage was formally allocated to respective contracts in late January/early February 1996.

8. Threshold Breaches:

There are no breaches to the approved acquisition program baseline dated October 20, 1995.

There are no Nunn-McCurdy unit cost breaches.

9. Schedule:

a. Milestones --

MHC 51, December 31, 1995

9a. Schedule (Cont'd):

| Milestones (Cont'd) — | Production<br>Estimate | Approved<br>Program | Current<br>Estimate |
|-----------------------|------------------------|---------------------|---------------------|
| MHC 53 Delivery       | MAR 94                 | MAR 95              | AUG 95(Ch-1)        |

Milestone I: ASN(S&L) contract design authorization.

Milestone II: ASN(S&L) Program Endorsement Memo authorizing lead ship production.

Milestone IIIA: ASN(S&L) authorization for award of FY 89 ships.

Milestone IIIB: ASN(S&L) authorization for award of FY 90 ships and out.

b. Previous Change Explanations —

MHC 51 Acceptance Trials (AT) and Delivery: Based on continued lag in MHC 51 (program leadship) production, testing, and ILS progress, MHC 51 AT and Delivery milestones were respectively revised from 11/92 to 5/93 and 12/92 to 6/93. MHC 51 was delivered 5/12/93.

MHC 53 Delivery: As a result of continued and extensive design, production, and integrated systems testing problems on Avondale's lead production ship, the delivery estimate was revised from March 94 to July 95.

c. Current Change Explanations —

(Ch-1) MHC 53 delivery estimate from prior SAR reported July 95; actual delivery occurred in August 95.

d. References —

"Draft (Nav)" represents Full Load Navigational Departure Draft.

b. Previous Change Explanations —

An erroneously stated threshold for MHC "Draft" of 2.8 meters was corrected to 3.68 meters through a Program Deviation Request (PDR) approved by the NAE in 7/93. The change was an administrative correction and had no adverse cost, schedule, or performance impact to the program.

Refinement of full load displacement (metric tons) from prior estimate of 918 to 914 based on MHC 51 (lead ship) inclining experiment.

c. Current Change Explanations —

(CH-1) Draft and Full Load Displacement: Using Avondale Industries lead ship (MHC 54) inclining experiment of January 1996 as a "worst case" estimate for the ship class, the following changes to current estimate are: "Draft" (represented as full load navigational departure draft) revised from 3.68 meters to 3.69 meters; and, "Full Load Displacement," revised from 914 metric tons to 955 metric tons.

b. Previous Change Explanations —

RDT&E

Estimating: Award of RDT&E,N based shipbuilder claims.

Procurement

Economic: Net cumulative effect of revised OSD inflation indices.

Estimating: For 12/92 SAR, net changes based on FY 92 contract award savings, reduction of funding to ceiling for FY 93 program year ships, and reduction in outfitting and post delivery requirements. For 12/93 SAR, net increase for contract claims coverage, small increase in GFE and outfitting and post delivery estimates. For 12/94 SAR, net

MHC 51, December 31, 1995

13b. Cost Variance Analysis (Cont'd):

program increases for: basic contract growth (low value claim/REA settlement, change order reserve, expanded shock trial requirements, and outfitting and post delivery estimates.

Support: Adjustment/correction of \$0.2M for prior year inflation.

c. Current Change Explanations --

|   | (Dollars in Millions) |           |
|---|-----------------------|-----------|
|   | Base-Year             | Then-Year |
| (1) Procurement   |                       |           |
| Revised OSD inflation indices.  |                       | +0.7      |
| (Economic)  |                       |           |
| Funding (TY) for IMUSA global settlement (\$135M), Avondale REA (\$30M), LORAL Co. REA (\$6M), and economic adjustment.   | +167.0                | +170.3    |
| (Estimating)  |                       |           |
| Increase mainly based on: added On-Board Repair Parts (OERP) procurement and, funding for procurement of MHC machinery control console equipment for life cycle software support management effort. | +9.9                  | +10.2     |
| (Estimating)  |                       |           |
| Increases primarily resulting from higher GFE categorized shock trial estimates in addition to small increases in SQQ-32 Sonar procurement costs.   | +3.5                  | +3.9      |
| (Estimating)  |                       |           |
| Refinement of cost estimates for conduct of Post Shakedown Availability (PSA) work. (Estimating)  | +1.4                  | +1.6      |
| Decrease in ships' outfitting and post delivery funding estimates. (Estimating)   | -19.7                 | -24.1     |
| Adjustment to align Flyaway and Support costs. (Estimating)   | +0.5                  | +0.5      |
| Adjustment to align Flyaway and Support costs. (Support)  | -0.5                  | -0.5      |
| Procurement Subtotal  | +162.1                | +162.6    |

Explanation of Change:

\$M/Contract Base Year Dollars

MHC 56/57 CONTRACT COVERAGE:

MHCs 56 and 57 are Avondale's final two, of four, MHC ships. The prior year SAR reported cost variance of \$-0.5M declined moderately to \$-5.4M (-5.1% variance to total budget). Further significant negative cost variance increase is not expected. Avondale's Estimate At Completion (EAC) cost is \$119.5M—a \$4.5M increase over last year's \$115.0M estimate (\$1.1M of the \$4.5M increase is negotiated changes). The PM's current cost EAC of \$123.0M represents a \$5.7M increase over last year's \$117.3M. The current EAC equates to a \$4.9M loss relative to 12/31/95 contract values. However, a portion of an Avondale REA recently negotiated for \$28.9M (total for all four MHCs at Avondale) results in formal repricing which will render a currently estimated \$1.7M profit on this contract. (At time of SAR

MHC 51, December 31, 1995

15. Contract Information (Cont'd):

preparation, the REA values were not yet included in an established Contract Cost Performance Report (CPR) baseline). During the past year, Avondale has demonstrated marked improvement in their monthly production progress rates. The company continues to maintain a production pace which is expected to enable MHC 56 and 57 to meet respective PM delivery estimates of 8/96 and 1/97. The prior year SAR estimates were 7/96 and 1/97.

NOTE: The prior (December 1994) MHC SAR submission included contract coverage for Avondale's first two production ships, MHCs 53 and 54. MHC 53 delivered during August 95 and MHC 54 delivered February 96. With the ships delivered, these contracts are no longer reported in the SAR.

Explanation of Change:

MHC 58-60 CONTRACT COVERAGE: IMUSA was awarded 8 of the program's 12 authorized ships. The MHC 58, 59, and 60 contract buys IMUSA's respective 4th, 5th, and 6th production ships. Prior SAR submissions have described extreme cost overruns and consequential losses on the company's first two contracts, MHCs 51 and 52. Losses were such that bankruptcy was threatened and delivery of remaining ships was in doubt. After CNO confirmed a mission need for a 12 ship MHC program, a strategy was developed to define and equitably resolve several major issues between the Navy and IMUSA. Subsequent effort was directed at collectively negotiating resolution to these issues under a single "global" settlement.

One of several global settlement terms involved conversion of the MHC 58-60 basic contract (and MHC 61/62 option) from a Fixed Price Incentive (FPI) to a Firm Fixed Price (FFP) type contract. The contract pricing data above shows current FFP values. Since these

MHC 51, December 31, 1995

15. Contract Information (Cont'd):

values have not yet been applied to a Cost Performance Report (CPR) performance measurement baseline, the cost variance data shown reflects prior (pre-global settlement) contract values. These variances will be adjusted when global settlement FFP values are factored to a new CPR performance measurement baseline. Variances are expected to be minimized or eliminated. The current FM cost Estimate At Completion (EAC) for this contract is \$200.4M; the contractor's EAC is \$192.6M.

IMUSA's production efficiencies have improved markedly. The company has delivered 4 of the 8 ships awarded them—the most recent of which was MHC 58 which delivered 1/16/96. The FM estimates that the remaining ships under contract, MHCs 59-62, will deliver at their maximum (earliest) incentive dates. Current Navy FM delivery estimates are: MHCs 59, 10/96; MHC 60, 7/97; MHC 61, 4/98; and MHC 62, 12/98.

NOTE: The prior (December 1994) MHC SAR submission included contract coverage for IMUSA's third production ship, MHC 55, which was delivered during May 95. Having delivered, the ship contract is no longer reported in the SAR.

Explanation of Change:

MHCs 61 & 62 are IMUSA's final production ships and the last 2 ships of the 12 ship program. The MHC 61/62 procurement is an option to the basic MHC 58-60 contract. This option is subject to the same global settlement conditions applicable for the base MHC 58-60 contract, i.e., conversion from FPI to FFP with early delivery schedule incentives.

Contract values noted above are to global settlement terms; variances

MHC 51, December 31, 1995

15. Contract Information (Cont'd):

are to pre-global settlement values and reflect November 95 CPR data. CPR rebaselining to current values is expected to be provided in the February 96 CPR (available late March 96). The current PM and contractor price EAC are at the contract's current firm fixed price of \$157.4M. Of note, current CPR reported cost and schedule variances represent significant improvement over those reported on the previous SAR. These values will be adjusted to reflect recently revised FFP contract cost baselines in the February 95 CPR which will be available in March. The PM estimates that MHC 61 and 62 will deliver to, or perhaps earlier than, current maximum global settlement delivery dates. The current PM delivery estimates, which reflect maximum (early) incentive dates are: MHC 61, 4/98 and, MHC 62, 12/98.

16. Program Funding Summary (Current Estimate in Millions of Dollars):

a. Program Status --

- (1) Percent Program Completed: 73.3% (11 yrs/15 yrs)
- (2) Percent Program Cost Appropriated: 98.7% (\$1691.0 / \$1713.7)

b. Appropriation Summary (Then-Year Dollars in Millions)

b. Approved Design-to-Cost Objective — N/A.

MHC 51, December 31, 1995

18. Operating and Support Costs:

a. Assumptions and Ground Rules --

O & S costs associated with the Coastal Minehunter (MHC) are based on a 35 year service life. Factors and associated O & S cost estimates are based on a new design ship class with first unit delivering in the May/June 1993 timeframe. Estimates are based on an "operating tempo" approach and include direct costs to support the primary personnel to operate the ships (currently authorized force level of 12 ships), Operations (including fuel, repair parts, supplies, training, and purchased services), Intermediate and Depot level maintenance, and Indirect Costs including training, publications, engineering and technical services.

b. Costs -- (FY 1992 Constant (Base-Year) Dollars in Millions)

| Cost Element       | Cost Element<br>Avg Annual Cost Per<br>Ship | Avg Annual Cost Per<br>Ship |
|--------------------|---|-----------------------------|
| Direct Personnel   | 1.8   | N/A                         |
| Unit Operations    | 0.6   | N/A                         |
| Fuel               | 0.2   | N/A                         |
| Direct Maintenance | 1.4   | N/A                         |
| Indirect Costs     | 0.1   | N/A                         |
| Total              | 4.1   | N/A                         |

c. Contractor Support Costs -- None.

Navy Extremely High Frequency Satellite Communications Program (NEHF)  
Titan IV Space Launch Vehicle  
Milstar Polar Adjunct  
Advanced MILSATCOM

6. (U) Mission and Description:

The Milstar Satellite Communications System, which in part takes over the mission of DSCS and AFSATCOM, is a joint service program to develop and acquire the Milstar satellite, its mission control segment, and Army, Navy and Air Force communications terminals. The Milstar system will provide survivable, jam-resistant, world-wide secure communications for the National Command Authorities and Commanders-in-Chief to command and control their tactical and strategic forces at all levels of conflict.

7. (U) Program Highlights:

a. (U) Significant Historical Developments --

In 1983, the Milstar Satellite Communications System program was designated with the highest national priority. After a short feasibility study, the Space and Mission Control program proceeded directly into the Full Scale Development (FSD) phase. The FSD contract was awarded in Jun 83.

The Command Post (CP) Terminal Program began in 1983 with a demonstration/validation phase. FSD began in Jun 83 with a Raytheon/Rockwell team awarded the FSD contract under a leader/follower strategy. After Milestone IIIA for Low-Rate Initial Production (LRIP) was held in May 89, the LRIP contracts to procure Command Post Terminals were awarded in Sep 89.

The Low Cost Terminal (LCT) was intended to support users at a lower cost while retaining nearly the same functionality as the CP Terminal. Risk reduction contracts were awarded in Jan 92 and the LCT program was designated a Low Level Technology Demonstration (LLTD) program in Aug 92. However, the program was terminated due to lack of firm user requirements. The Command Post Terminal "Buyout" contracts were awarded in May 93 for the remaining 44 terminals to both Rockwell and Raytheon.

In the National Defense Authorization Act for FY91, Congress directed the Department of Defense to restructure the Milstar system to

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

MILSTAR, December 31, 1995

7a. (U) Program Highlights (Cont'd):

reduce cost, increase the utility of the system for tactical users, and eliminate enduring nuclear warfighting capabilities. As a result, the number of satellites, mission control stations and terminals was reduced. Furthermore, features associated with nuclear hardness and survivability were reduced and capabilities to support tactical requirements were added. The Milstar II satellite will incorporate the Low Data Rate payload of the original Milstar satellite and add a new Medium Data Rate payload. A contract for the Milstar II satellite development was awarded in Oct 92 following a successful Oct 92 Defense Acquisition Board (DAB) Program Review.

In Dec 92 the first Development Flight Satellite (Sat-1, formerly DFS-1) was delivered to storage in preparation for a FY93 launch. However, as a result of an Aug 93 Titan IV failure and an Aug 92 Centaur failure, the launch of Sat-1 was delayed until 7 Feb 94. Also, in accordance with the Office of the Secretary of Defense (OSD) sponsored Bottom-Up Review (BUR) and as directed in the Defense Planning Guidance (DPG), the program will transition after Satellite 6 to a lower cost Advanced Extremely High Frequency (EHF) satellite. As a consequence, the Air Staff issued formal direction to initiate planning for a consolidated, multi-frequency, advanced MILSATCOM replenishment program. As a result of these schedule and programmatic changes, a Program Deviation Report (PDR), Acquisition Strategy Report (ASR), and a revised Acquisition Program Baseline (APB) were submitted.

The revised Acquisition Strategy Report (ASR) was approved by the Office of the Secretary of Defense (OSD) on 13 Jun 94, outlining our strategy for streamlined procurement of Satellites 5 and 6, including initial plans for an advanced Combined Parts Buy (CPB). The Satellite 5 and 6 contract was awarded on 1 Nov 94 after notifying Congress and satisfying the exit criteria for the build of Satellites 5 and 6 -- completion of Dedicated Asset Test (DAT) (per updated Test and Evaluation Master Plan dated 22 Apr 94) and Milstar II System Critical Design Review.

On 30 Jun 94, a contract modification was issued to convert Satellite 3 from a Low Data Rate (LDR) only to a LDR/MDR (Medium Data Rate) configuration and to reschedule Satellite 3M and Satellite 4 deliveries.

Sat 1, launched on 7 Feb 94, successfully completed Air Force Operational Test and Evaluation Center's (AFOTEC) Dedicated Asset Test (DAT) and Navy's Follow-On Operational Test and Evaluation (FOT&E) on 9 Sep 94. The program office turned over Satellite Control Authority (SCA) to Air Force Space Command (AFSPC) on 1 Nov 94.

- 3 -

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

MILSTAR, December 31, 1995

7a. (U) Program Highlights (Cont'd):

27 Command Post Low Rate Initial Production (LRIP) Terminals were delivered under target price in Jul 94.

In a 17 Jan 95 memo, the Defense Acquisition Executive (DAE) directed the program office to decouple the Advanced EHF and Milstar programs, and to appropriately revise the Milstar Acquisition Program Baseline to only include the 2 Milstar block I and 4 Milstar block II satellites. In addition, the revised baseline incorporated the current approved test plan and established new milestones in accordance with the approved Milstar Streamlined Acquisition Strategy Report. The revised Milstar APB was approved by the DAE on 6 Feb 95.

b. (U) Significant Developments Since Last Report --  
On 11 May 95, the Office of the Joint Chiefs of Staff (JCS) certified the Milstar Low Data Rate (LDR) system for Emergency Action Message (EAM) dissemination and force feedback.

Transition to the Satellite Mission Control Subsystem (SMCS) was completed on schedule (13 May 95) with completion of a system confidence demonstration at Falcon AFB, CO. This new command and control system incorporates commercial hardware and upgraded software to provide for multi-satellite control.

The Milstar Operational Requirements Document (ORD) (Sep 92) requires mid-latitude satellites and a Polar Adjunct to satisfy the Acquisition Program Baseline (APB) (6 Feb 95) Full Operational Capability (FOC) coverage parameter. On 11 Jul 95, the Joint Requirements Oversight Council (JROC) approved the initial Polar ORD. In addition, on 17 Jul 95, the Defense Acquisition Executive (DAE) signed the Acquisition Decision Memorandum (ADM) to procure the first hosted payload for the interim solution to be launched in FY97 and to designate Polar as an ACAT II program. As a result, the Milstar ORD and APB are being revised to no longer include Polar requirements.

On 4 Aug 95, the Milstar system successfully completed Phase I Operational Testing & Evaluation ahead of schedule.

On 11 Aug 95, the Milstar II Mission Control Critical Design Review (CDR) was completed with no major action items. The CDR certified that the Milstar II Mission Control Segment design was producible and satisfied performance and engineering requirements.

On 6 Nov 95 Satellite 2 was successfully launched from Cape Canaveral on a Titan IV/Centaur booster. The satellite arrived at its initial

MILSTAR, December 31, 1995

7b. (U) Program Highlights (Cont'd):

testing location at 90 degrees West longitude and completed early on-orbit operations. On 15 Dec 95, Milstar demonstrated unprecedented communication capability with a message sent from the JCS to the CINCs without the use of vulnerable ground relays. The message was sent from the National Military Command Center's terminal at Ft. Belvoir, VA to Satellite 1, then crosslinked to Satellite 2, and downlinked to the CINCs.

Satellite 2 continues to progress through on-orbit developmental testing with single satellite testing nearly complete and is on schedule for transfer of Satellite Control Authority (SCA) to AFSPC in Mar 96 after repositioning to its operational test location of 4 degrees West longitude.

Thirty-six of forty-four Command Post Production Terminals have been delivered. Rockwell has completed delivery on all 24 of their terminals well ahead of contractual requirements. Raytheon, also ahead of contractual schedule, has completed delivery on 12 of 20 terminals. Ten LRIP Terminals were installed in 1995 bringing the total installations to 19.

The Milstar system is expected to satisfy all mission requirements.

c. (U) Changes Since As Of Date -- None.

8. (U) Threshold Breaches:

There are no breaches to the DAB approved Acquisition Program Baseline (APB) dated February 6, 1995, and no Humm-McCurdy unit cost breaches.

9. (U) Schedule:

Satellites

LDR - Low Data Rate  
MS - Milestone

b. (U) Previous Change Explanations --

Satellite 1 On-Orbit DT&E and Milstar I Phase 1 and Phase 2 IOT&E milestones delayed due to an Aug 92 launch failure of a Centaur upper stage on an Atlas launch vehicle which impacted the planned launch of the first Development Flight Satellite (DFS-1, now Sat-1).

Milstar II IOT&E, MS III, and IOC II milestones changed due to \$180M budget reduction in the FY94 President's Budget.

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

MILSTAR, December 31, 1995

9b. (U) Schedule (Cont'd):  
Satellites

New Satellite 1 On-Orbit DT&E and Milstar I Phase 1 IOT&E testing milestones replaced Satellite 1 On-Orbit DT&E and Milstar I Phase 1 IOT&E Start/Complete milestones.

Milstar I Phase 2 IOT&E Start/Complete and IOC I milestones changed to reflect change in DFS-2 launch manifest date.

Milstar II MS III milestone deleted due to removal of production phase per the Defense Planning Guidance resulting from the Bottom-Up Review (BUR). Advanced XHF MS I milestone added to reflect transition to lower cost satellites launch on Medium Launch Vehicles.

Milstar II IOT&E milestones changed to reflect availability of Titan IV/Centaur and Launch Complex to support manifested launch dates.

Milstar I Phase 1 IOT&E Complete Milestone changed to reflect revised testing strategy in DAE approved Acquisition Program Baseline (APB) dated 6 Feb 95.

Advanced XHF MS I deleted in the Current Estimate due to 17 Jan 95 DAE decision to exclude Advanced MILSATCOM from the Milstar baseline.

c. (U) Current Change Explanations --

(Ch-1) Program Manager's Current Estimate for Milstar I Phase 1 IOT&E Complete changed from Sep 95 to Aug 95 to reflect early completion of test.

(Ch-2) Program Manager's Current Estimate for Milstar I Phase 2 IOT&E Start/Complete and IOC I milestones slipped by five months. A Titan IV issue, which delayed the launch of Satellite 2 until Nov 95, Satellite repositioning, and Air Force Operational Test and Evaluation Center (AFOTEC) entrance criteria have delayed the start of Milstar I Phase 2 IOT&E testing from Mar 96 until Aug 96 and complete from Sep 96 to Feb 97. IOC I changed from Jan 97 to Jun 97.

d. (U) References --

(U) Development Estimate:  
DAE approved Acquisition Program Baseline dated October 28, 1992.

(U) Approved Program:  
DAE Approved Acquisition Program Baseline dated February 06, 1995.

Acronyms & Abbreviations:

\*\*\*\*\*

CDR - Critical Design Review  
DT&E - Developmental Test and Evaluation  
FOC - Full Operational Capability  
IOC - Initial Operational Capability  
IOT&E - Initial Operational Test and Evaluation  
MS - Milestone

b. (U) Previous Change Explanations --

Satellite 1 On-Orbit DT&E and Milstar I Phase 1 and Phase 2 IOT&E milestones delayed due to an Aug 92 launch failure of a Centaur upper stage on an Atlas launch vehicle which impacted the planned launch of the first Development Flight Satellite (DFS-1, now Sat-1).

Milstar I Phase 2 IOT&E milestones changed due to planned APB revisions.

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

MILSTAR, December 31, 1995

9b. (U) Schedule (Cont'd):

CP Terminals

IOC II milestone changed due to \$180M budget reduction in the FY94 President's Budget.

New Satellite 1 On-Orbit DT&E and Milstar I Phase 1 IOT&E testing milestones replaced Satellite 1 On-Orbit DT&E and Milstar I Phase 1 IOT&E Start/Complete milestones.

Milstar I Phase 2 IOT&E Start/Complete and IOC I milestones changed to reflect change in DPS-2 launch manifest date.

Milstar I Phase 1 IOT&E Complete Milestone change reflects revised testing strategy in DAE approved Acquisition Program Baseline (APB) dated 6 Feb 95.

c. (U) Current Change Explanations --

(Ch-1) Program Manager's Current Estimate for Milstar I Phase 1 IOT&E Complete changed from Sep 95 to Aug 95 to reflect early completion of test.

(Ch-2) Program Manager's Current Estimate for Milstar I Phase 2 IOT&E Start/Complete and IOC I milestones slipped by five months. A Titan IV issue, which delayed the launch of Satellite 2 until Nov 95, Satellite repositioning, and Air Force Operational Test and Evaluation Center (AFOTEC) entrance criteria have delayed the start of Milstar I Phase 2 IOT&E testing from Mar 96 until Aug 96 and complete from Sep 96 to Feb 97. IOC I changed from Jan 97 to Jun 97.

d. (U) References --

(U) Production Estimate:

DAE approved Acquisition Program Baseline dated October 28, 1992.

12. (U) Unit Cost Summary:

Satellites

|        | Current<br>Estimate | UCR<br>Baseline | Percent<br>Change |
|--------|---------------------|-----------------|-------------------|
| (b)(1) |                     |                 |                   |

b. (U) Procurement

|                   |      |      |     |
|-------------------|------|------|-----|
| (1) Cost (FY90\$) | 40.0 | 39.0 |     |
| (2) Quantity      | 0    | 0    |     |
| (3) Unit Cost     | N/A  | N/A  | N/A |

Note: Per 1993 Defense Planning Guidance resulting from the SECDEF's Bottom-Up Review, the Milstar II program will terminate after Satellite 6 and transition to a lower cost Advanced EHF satellite with first launch no later than FY06. As a result of this direction, the Milstar II program will no longer build production satellites (8 through 11). Consequently, procurement unit cost is not applicable to the Milstar space segment.

MILSTAR, December 31, 1995

13b. (U) Cost Variance Analysis (Cont'd):

Satellites

Removed Advanced MILSATCOM Technology Program from  
Milstar baseline

Deleted Milstar Training Augmentation Device (MTAD)  
and Mission Planning Element (MPE) Phase IIB

ed: Increased risk for Satellites 3M and 4 due to  
program funding reductions

Reduced Flight/Ground software maintenance and  
program support requirements (FY95-11)

Support: 2nd Fixed Mission Control Site deleted

Procurement

Economic: Revised escalation indices.

Quantity: Milstar II production satellites 8-11 deleted

Estimating: Reallocation of funding from Milstar to DSCS

Support: Revised estimate for Satellite Mission Control  
Subsystem (SMCS) spares

Reduction in Mission Planning Element (MPE) and  
Milstar Mobile Constellation Control System  
(MMCCS) requirements

c. (U) Current Change Explanations --

(Dollars in Millions)

MILSTAR, December 31, 1995

13b. (U) Cost Variance Analysis (Cont'd):

CP Terminals

Revised estimate due to Small Business Innovative Research (SBIR) reduction  
Realigned to other procurement (3080) to cover shortfall in spares  
Process Action Paper (PAP) 56 Initiative to realign program support to other procurement

Procurement

Economic: Revised escalation indices

Quantity: Reduction of 3 Navy terminals, from 11 to 8 terminals and addition of 6 Navy terminals from 8 to 14. Reduction of 5 Air Force CP Terminals from 93 to 88 terminals and additional reduction of 15 Air Force CP Terminals from 88 to 73.

Estimating: Revised estimate for terminal segment  
Adjustment for current and prior year inflation  
Reclassified Flyaway costs to Other Weapon Support costs in the Dec 92 SAR

Support: Revised estimate to complete procurement of radomes  
Adjustment for current and prior inflation  
Revised estimate to build Command Post Terminal shelters  
Additional support to complete procurement of radomes  
Reinstated funding for E-4 terminals and spares  
Additional Army spares purchase  
Reclassified Flyaway costs to Other Weapon Support costs from Dec 92 SAR

MILCON

Economic: Revised escalation indices.

Estimating: Revised number of permanent bases to two and terminal installation delayed due to budget reduction  
Adjustment for current and prior inflation  
Excess funds removed during MILCON cleanup

a. (U) EDT&E --

|  |          | Initial Contract Price |     |  |
|--|----------|------------------------|-----|--|
| (U) Milstar II Satellites:             | Target   | Ceiling                | Qty |  |
| Lockheed Mal & Space Co, Sunnyvale, CA |          |                        |     |  |
| F04701-92-C-0049, CPAF                 | \$1659.5 | N/A                    | 1   |  |
| Award: October 30, 1992                |          |                        |     |  |
| Definitized: October 30, 1992          |          |                        |     |  |

| Current Contract Price |         |     | Estimated Price At Completion |                 |
|------------------------|---------|-----|-------------------------------|-----------------|
| Target                 | Ceiling | Qty | Contractor                    | Program Manager |
| \$3739.9               | N/A     | 4   | \$3736.7                      | \$3736.7        |

|   | Cost Variance | Schedule Variance |
|---|---------------|-------------------|
| Previous Cumulative Variances           | \$5.5         | \$-8.6            |
| Cumulative Variances To Date (01/28/96) | \$26.3        | \$-5.2            |
| Net Change                              | \$20.8        | \$3.4             |

Explanation of Change:

Cost variance improved from \$5.5M to \$26.3M which represents a 2.1% underrun. Low Data Rate (LDR) payload manufacturing efficiencies and favorable subcontractor overhead rate adjustments have been the main drivers for the favorable cost variance. The Medium Data Rate (MDR) payload, which represents the major development work on this contract, has experienced 12 straight months of favorable cost variance and the subcontract is expected to achieve its target cost upon completion.

Schedule variance improved from -\$8.6M to -\$5.2M. The unfavorable schedule variance is due mainly to spacecraft subcontract delays and late qualification of some MDR complex parts. These issues do not represent a significant risk to hardware delivery or satellite launch availability.

Current Contract Target Price decreased by \$7.4M since the Dec 94 SAR. The decrease is due to acquisition reform savings which were partially offset with the Medium Data Rate (MDR) upgrade to the Milstar Mobile On-Orbit Support Equipment (MDOSE), Low Data Rate Communication Asset Monitor (LDR CAM) and other new Engineering Change Proposals (ECPs) to the contract.

There is no impact to the contract or to the program.

\*\*\* UNCLASSIFIED \*\*\*

MILSTAR, December 31, 1995

15. (U) Contract Information (Cont'd):

b. (U) Procurement --  
(U) CP Production Terminals:  
Raytheon, Malborough, MA  
F19628-93-C-0032, FFP  
Award: May 28, 1993  
Definitised: May 28, 1993

|  | Initial Contract Price |         |     |
|--|------------------------|---------|-----|
|  | Target                 | Ceiling | Qty |
|  | \$74.0                 | N/A     | 20  |

| Current Contract Price |         |     | Estimated Price At Completion |                 |
|------------------------|---------|-----|-------------------------------|-----------------|
| Target                 | Ceiling | Qty | Contractor                    | Program Manager |
| \$123.8                | N/A     | 20  | \$123.8                       | \$123.8         |

Explanation of Change:

Cost and Schedule variance reporting is not required on this FFP contract.

Current Contract Target Price increased from \$97.5M to \$123.8M due to Production Engineering Support, Nuclear Hardness Maintenance/ Hardness Surveillance (HM/HS) Hydrophobic Coating, Antenna/Pedestal Assembly, Terminal Software Test Facility, Advanced Computer Program Maintenance Facility Mod Contingency-Antennas/ Pedestal Assembly (C-A/PAs) MCCCS & Milstar Communication Vehicle (MCV) Platforms and Spares and additional Equipment.

(U) CP Production Terminals:  
Rockwell, Richardson, TX  
F19628-93-C-0033, FFP  
Award: May 28, 1993  
Definitised: May 28, 1993

|  | Initial Contract Price |         |     |

17a. (U) Production Rate Data (Cont'd):  
CP Terminals

a. (U) Deliveries to Date --

EDT&E  
Procurement

Plan/Actual  
27/27  
79/79

b. (U) Approved Design-to-Cost Objective -- N/A.

18. (U) Operating and Support Costs:  
Satellites

a. (U) Assumptions and Ground Rules --

The Operating & Support (O & S) period covers phase-in to Full Operation Capability (FOC) FY92-99 plus 12 steady state years. This estimate covers the cost of 12 Satellite Mission Control Subsystems in a steady-state condition. The maintenance concept consists of two levels for hardware and software. A constellation consists of four satellites. Support costs are derived from the 25 Aug 92 Program's Cycle Cost Estimate (PLCCE).

There is no antecedent for this system.

b. (U) Costs -- (FY 1990 Constant (Base-Year) Dollars in Millions)

| Cost Element           | Avg Annual Cost Per Constellation | Avg Annual Cost Per Antecedent |
|------------------------|-----------------------------------|--------------------------------|
| Mission Personnel      | 17.9                              | N/A                            |
| Unit Level Consumption | 2.9                               | N/A                            |
| Depot Maintenance      | 0.1                               | N/A                            |
| Contractor Support     | 9.5                               | N/A                            |
| Total                  | 30.4                              | N/A                            |

c. (U) Contractor Support Costs -- None.

CP Terminals

a. (U) Assumptions and Ground Rules --

Operational requirements are 12 hours per mission for airborne force element terminals, 16 hours per mission for airborne command post

\*\*\* UNCLASSIFIED \*\*\*

\*\*\* UNCLASSIFIED \*\*\*

MILSTAR, December 31, 1995

18a. (U) Operating and Support Costs (Cont'd):

CP Terminals

terminals, 24 hours per day for fixed ground terminals, and 12 hours per day for transportable ground terminals. These costs assume 5 years ramp-up and 15 years of steady state operations. The maintenance concept for all command post terminals is two-level. Support costs are derived from the Sep 92 Terminal program office estimate.

There is no antecedent for this system.

b. (U) Costs -- (FY 1990 Constant (Base-Year) Dollars in Millions)

| Cost Element             | Avg Annual Cost Per Terminal | Avg Annual Cost Per Antecedent |
|--------------------------|------------------------------|--------------------------------|

AOE 6 SUPPORT SHIP, December 31, 1995

6. Mission and Description:

MISSION. The Fast Combat Support Ship operates as an integral part of the Carrier Battle Group providing simultaneous multiproduct underway replenishment by means of connected replenishment (CONREP) and vertical replenishment (VERTREP) using embarked helicopters. The ship delivers on-station munitions, bulk petroleum and oil and lubricants products, and fresh, frozen, and dry provisions to the Carrier Battle Group underway in hostile environments. The ship delivers and receives fleet freight, mail, and personnel to and from combatant forces underway. The ship will be capable of replenishing from six stations simultaneously.

DESCRIPTION. A 156,000 barrel cargo fuel capacity, twin screw, 20+ knots sustained speed, gas turbine geared drive ship, 753'8" in overall length, 107'0" in beam, and with a draft of 38'3". The ship will have the design capacity for 1800 long tons of ammunition, 400 long tons of Chill and Freeze Storage, 250 long tons of other cargo stowage, two H-46 VERTREP helicopters, and will have accommodations for 667 personnel, including crew, detachment personnel, and 38 transient personnel.

7. Program Highlights:

a. Significant Historical Developments --

The AOE 6 Class Program was approved by Navy Decision Coordinating Paper (NDCP) on 20 MAR 86. The lead ship contract for detail design and construction was awarded to National Steel and Shipbuilding Company (NASSCO) on 23 JAN 87. The award was an option-type (one-plus-three), fixed price incentive (FPI), subject to escalation, contract (50/50 share). The option for the first follow ship (AOE 7) was exercised on 3 NOV 88 and for the second (AOE 8) on 6 DEC 89; the third option was allowed to lapse.

As a result of the FY 92 Congressional Budget, the AOE 6 Class Program was reduced from 7 to 4 ships; the FY91 ship (AOE 9) was rescinded and a FY93 ship (AOE 10) was added. A competitive contract for detail design and construction of the AOE 10 was awarded to NASSCO on 15 JAN 93. The award was a fixed price incentive (FPI), subject to escalation, contract (50/50 share). The option to build the AOE 10 Reversing Reduction Gears (RRG) was also exercised with Cincinnati Gear Company on 15 JAN 93. Construction of the AOE 10 commenced on 16 SEP 93.

In MAY 91, the FY91 Dire Emergency Supplemental Appropriations Act provided the AOE 6 Class Program with \$237.0M to complete the three ships under contract at NASSCO. These funds were required to cover cost growth and claims associated with shipbuilder overruns. Due to these additional funds, the Program Acquisition Unit Cost (PAUC) increased by 30% requiring a Nunn-McCurdy Unit Cost Breach Report. On 12 DEC 91, USD(A) certified the AOE 6 program to Congress in order

AOE 6 SUPPORT SHIP, December 31, 1995

7a. Program Highlights (Cont'd):

to continue with the execution of the program.

NASSCO submitted certified claims for \$460.0M. A settlement modification was executed with available funding on 26 DEC 91 for \$239.0M. The majority of claims entitlement was due to the late delivery of Government furnished RRGs resulting in a loss of learning and inefficiencies due to the larger required workforce.

In the summer of 1992, National Steel and Shipbuilding Company's (NASSCO) labor union contract with the production labor personnel expired; shipyard personnel continued to work without a union agreement.

In JAN 93, a fifth ship (AOE 11) was added to the program with a sixth ship in the out-years, increasing the program to 6 ships. In JAN 94, the FY94 Congressional Budget dropped the last two ships restoring the program to 4 ships.

AOE 6 successfully completed Acceptance Trials during the week of 13-17 DEC 93, with delivery on 31 JAN 94 and was commissioned USS SUPPLY on 26 FEB 94.

AOE 7 was delivered on 25 AUG 94.

b. Significant Developments Since Last Report --  
AOE 7 was commissioned USS RAINIER on 21 JAN 95.

AOE 8 was delivered on 11 MAY 95 and commissioned USS ARCTIC on 16 SEP 95.

Landing of the port and starboard reduction gears for the AOE 10 occurred on 5 DEC 95 and 17 DEC 95 respectively.

On 28 SEP 95 the Navy and NASSCO agreed to a global claim settlement including prime, subcontractor and insurance claims, against the AOE 6, 7, and 8, in the amount of \$38.9M.

Additional schedule delays were introduced by the contractor when manpower was diverted from the AOE 10 to the Strategic Sealift Conversion program ships in an attempt to recover significant schedule delays with that program. Although NASSCO's attempts at schedule recovery have been unsuccessful their proposed schedule focuses management attention on the AOE program, outlines key production deadlines, and foremost, it is based on achievable manning levels and realistic production rates. The PM projects that AOE 10 delivery will slip by at least 5 months beyond the current contract date of OCT 97.

b. Previous Change Explanations --

ACCEPTANCE TRIALS - 1ST SHIP: The delay from JUL 91 to SEP 91 was attributable to a delay in launch, late receipt of main reduction gear, and concurrent propulsion testing. The delay from SEP 91 to JUN 92 was due to NASSCO production inefficiencies and late delivery of Reversing Reduction Gears (RRG). The delay from JUN 92 to DEC 92 was driven by NASSCO's production inefficiencies and late delivery of RRG. The delay from DEC 92 to FEB 93 was caused by continued NASSCO production inefficiencies and reprogramming resulting from claims settlement. The delay from FEB 93 to AUG 93 was due to the 25-day general labor strike and the status of remaining production and engineering work. The delay from AUG 93 to OCT 93 was a result of high rates of rework and labor unrest. The delay from OCT 93 to DEC 93 was caused by the need to reconduct Builder's Sea Trials.

( UNCLASSIFIED )

( UNCLASSIFIED )

AOE 6 SUPPORT SHIP, December 31, 1995

9b. Schedule (Cont'd):

DELIVERY - 1ST SHIP: The delay from AUG 91 to NOV 91 resulted from the delay in Acceptance Trials. The delay from NOV 91 to SEP 92 was due to NASSCO production inefficiencies and late delivery of RRG. The delay from SEP 92 to FEB 93 was caused by the delay in Acceptance Trials. The delay from FEB 93 to APR 93 was attributable to NASSCO's production inefficiencies and reprogramming resulting from late receipt of RRG, which led to an extension of the contract delivery date as a part of claims settlement. The delay from APR 93 to OCT 93 was due to the delay in Acceptance Trials. The delay from OCT 93 to JAN 94 was also driven by the delay in Acceptance Trials.

INITIAL OPERATIONAL CAPABILITY: The delay from NOV 91 to JAN 92 was due to the change in the fitting out period which was caused by a delay in delivery. The delay from JAN 92 to OCT 92 was caused by an additional delay in delivery of the first ship. The delay from OCT 92 to APR 93 was due to the change in the fitting out period caused by a delay in delivery. The delay from APR 93 to MAY 93 resulted from a change in the fitting out period caused by a change in delivery. The delay from MAY 93 to FEB 95 was caused by further delay in delivery of the AOE 6. The delay from NOV 93 to FEB 95 was also driven by the delay in the lead ship (AOE 6) delivery.

LAST AOE DELIVERY: The delay from FEB 98 to APR 99 was due to large lot buy-out in FY 93. The change from APR 99 to NOV 96 was a result of the reduction of production from seven to four ships. The delay from NOV 96 to APR 97 was caused by the delay in the AOE 10 anticipated contract award. The delay from APR 97 to OCT 04 was caused by the addition of a sixth ship in the outyears. The change from DEC 04 to OCT 97 was attributable to the reduction of the program from six to four ships.

c. Current Change Explanations --

(CH-1) INITIAL OPERATIONAL CAPABILITY: The delay from FEB 95 to JUN 95 was attributable to the delay in AOE 6 delivery.

(CH-2) LAST SHIP DELIVERY: The delay in the delivery date from OCT 97 to MAR 98 is due to contractor production inefficiencies and manning insufficient to maintain the current production schedule.

b. Previous Change Explanations --

RDT&E

Economic: Revised economic escalation indices.

Estimating: Increase in engineering development costs; Current and prior inflation offset; Revised engineering development costs for AOE 10 ship contract design; Revised estimate to complete contract design.

Procurement

Economic: Revised economic escalation indices; Economic adjustment for negative program change.

Quantity: Change in program: 7 to 4 ships; 4 to 6 ships.

Schedule: Change in acquisition strategy: from 1-1-0 to 1-0-1 (FY90 to FY92).

( UNCLASSIFIED )

AOE 6 SUPPORT SHIP, December 31, 1995

13b. Cost Variance Analysis (Cont'd):

Estimating: Repricing based on prior year ship costs; Current and prior inflation offset; Congressional reductions to FY 1992 program; Reclassification of support variance to estimating variance to reflect outfitting and post delivery as sailaway.

Support: Decrease in estimated outfitting and material costs; Increase in outfitting material costs and post delivery allowance for shock tests; Reclassification of support variance to estimating variance to reflect outfitting and post delivery as sailaway.

MILCON

Economic: Revised economic escalation indices; Economic adjustment for negative program change.

Estimating: Addition of homeport requirements; Current and prior inflation offset; Revised homeport requirements estimate.

O & M

Estimating: MILCON Planning/Design and Site Survey Studies.

| Previous Cumulative Variances           | \$-0.6               | \$11.0                   |
| Cumulative Variances To Date (12/03/95) | \$-10.8              | \$-9.9                   |
| Net Change                              | \$-10.2              | \$-20.9                  |

Explanation of Change:

The Negative Cost and Schedule Variances are due to production inefficiencies and manning insufficient to maintain the current production schedule.

The major driver of the Negative variances are in the Production Labor and associated Overhead.

15. Contract Information (Cont'd):

The Program Manager's current estimate at completion of \$383.1M is derived by utilizing historic performance and current trends to project the cost of work remaining. This methodology is applied at the functional level and added to the Actual Costs of Work Performed, (ACWP).

16. Program Funding Summary (Current Estimate in Millions of Dollars):

a. Program Status --

- (1) Percent Program Completed: 75.0% (15 yrs/20 yrs)
- (2) Percent Program Cost Appropriated: 96.8% (\$2339.1 / \$2416.6)

b. Approved Design-to-Cost Objective -- N/A.

18. Operating and Support Costs:

a. Assumptions and Ground Rules --

The AOE 6 Class Fast Combat Support Ship is designed to operate independently or as a unit of an underway replenishment group, furnishing petroleum/oil/lubricant products and fresh, frozen, and dry provisions to operating forces. The O&S costs associated with this ship class are based on a useful life of 30 years. Ship design

( UNCLASSIFIED )

AOE 6 SUPPORT SHIP, December 31, 1995

18a. Operating and Support Costs (Cont'd):

parameters indicate that each ship will consume about 110,900 BBL of fuel each year.

Direct personnel costs involve the annual cost for the embarked crew. Retirement and PCS costs are accounted for in Indirect Costs. Direct operating costs include the cost of fuel, repair parts, supplies, training expendable stores, and purchased services.

Direct maintenance includes Intermediate and Depot Level

Maintenance. Indirect costs include training, publications, ammunition handling, engineering/technical services support, retirement costs, and crew PCS costs. The baseline AOE 1 and AOE 6 Class Operating and Support estimate is the VAMOSC actuals for the per ship average by class for the AOE 1-4 in constant FY86 dollars.

b. Costs -- (FY 1986 Constant (Base-Year) Dollars in Millions)

Longbow Apache, December 31, 1995

4. (U) Program Elements/Procurement Line Items (Cont'd):

PROCUREMENT:

APPN 2031 ICN AA0978 (Army)  
APPN 2031 ICN AA6605 (Army)  
APPN 2031 ICN AA6607 (Army)  
APPN 2031 ICN AA6608 (Army)

5. (U) Related Programs:

AH-64 Apache, Hellfire Modular Missile System (HMMS), and Longbow Hellfire.

6. (U) Mission and Description:

The Longbow consists of a mast-mounted Fire Control Radar (FCR) that will be integrated into the AH-64 airframe and a Radio Frequency (RF) autonomous seeker in an upgraded Hellfire missile (Longbow Hellfire). Longbow will provide the AH-64 with a true fire-and-forget capability, greatly increasing weapon system effectiveness and aircraft survivability. The weapon system will be employable day or night, in adverse weather and in obscurants. Hellfire must effectively engage and destroy advanced threat armor on the Air-Land Battlefield of the late 1990's and into the next century. To be effective and survive on this future battlefield, the attack helicopter team must rapidly engage multiple targets with minimum exposure time and deploy a system that is inherently resistant to threat countermeasures. A total of 227 aircraft will be modified with all of the Longbow improvements including the FCR and the 701-C engine integrated onto an AH-64 airframe. An additional 531 aircraft will be modified to incorporate all of the Longbow improvements except the FCR and the 701-C engines.

7. (U) Program Highlights:

a. (U) Significant Historical Developments --

The Longbow program evolved from the Helicopter Adverse Weather Target Acquisition and Designation System (HAWTADS) activity initiated in 1978, which led to the Helicopter Adverse Weather Fire Control and Acquisition Radar (HAWFCAR) program. Martin Marietta Corporation (MMC) and Westinghouse Electric Corporation (WEC) were awarded parallel competitive technology demonstration contracts for an RF Fire Control Radar to be integrated and tested on the AH-64 Apache. In 1981, an RF Seeker for Hellfire was added, yielding a total system approach for Apache. In 1982, WEC and MMC were awarded parallel competitive contracts for the first phase, Critical Technology Demonstration (CTD).

Following the August 1985 Milestone I In-Process Review (IPR), a Joint Venture (JV) contract was awarded in November 1985 to MMC and WEC for tactical Longbow preliminary design. In August 1986, a Proof of Principle demonstration contract was awarded to the JV.

\*\*\* UNCLASSIFIED \*\*\*

Longbow Apache, December 31, 1995

7a. (U) Program Highlights (Cont'd):

Concurrently, the engineering development program was approved in the Army Acquisition Decision Memorandum (ADM) date July 20, 1989. This decision authorized integration of the Longbow Fire Control Radar onto four AH-64 prototype airframes.

In December 1990, an ADM was signed by the DAE to approve entry into Full Scale Development (FSD). In June 1991, the DAB directed that the Fire Control Radar, airframe, and missile contract efforts be aligned.

The Longbow prototype AH-64D aircraft, without a tactical Fire Control Radar, successfully completed its first flight in April 1992.

An Acquisition Program Baseline was signed in May 1993 to include an AH-64D model without the Fire Control Radar; that model will not include the 701-C engine.

In 1993, the Preliminary Airworthiness Evaluation and the Fire Control Radar Hardware and Software Critical Design Reviews were successfully completed. An AH-64D with an operating Fire Control Radar flew for the first time in August 1993.

In 1994, the program accomplishments included the FCR Built In Test Demonstration (June); AH-64D Logistics Demonstration and Conversion Demonstration (June); FCR Contractor Mode Performance Demonstration (June); the final Production Readiness Review supporting long lead production (August); FCR Countermeasures tower testing (September); Force Development Test and Experimentation (December); and Pre-Production Qualification Testing (December).

A successful Long Lead In-Process Review (IPR) was conducted for the Conventional Systems Committee (CSC) on October 5, 1994. This IPR resulted in approval for the Longbow aircraft and Fire Control Radar to obligate FY 95 Advance Procurement Funds, contingent upon Joint Requirements Oversight Council (JROC) approval of Longbow requirements. The JROC validated the revised key performance parameters on October 27, 1994. The Acquisition Decision Memorandum for long lead procurement was signed November 16, 1994. The Longbow long lead advance procurement contracts were signed with McDonnell Douglas Helicopter Systems and the Joint Venture in December 1994.

b. (U) Significant Developments Since Last Report --  
The Gunnery Phase of Initial Operational Test and Evaluation (IOT&E) was successfully completed in February 1995. The final phase of IOT&E (Force-on-Force) was completed in March 1995. Longbow aircraft flew approximately 430 hours in IOT&E and fought against

Longbow Apache, December 31, 1995

7b. (U) Program Highlights (Cont'd):

the heaviest air defense threat and opposing force countermeasures used in any attack helicopter test in history. More than 1,000 personnel participated, making the Longbow IOT&E the largest operational test conducted by the U.S. Army in several years. Longbow displayed outstanding levels of lethality, survivability, and suitability.

Longbow Live Fire Test & Evaluation efforts were begun in April and successfully completed in July 1995.

The Under Secretary of Defense for Acquisition and Technology USD(A&T) convened a Defense Acquisition Board Readiness Meeting for the AH-64D Longbow on October 13, 1995. At that meeting, the USD(A&T) waived the requirement for a formal Milestone III and provided approval for the AH-64D to enter the production phase. The Acquisition Decision Memorandum was signed on October 18, 1995.

The Longbow Apache system is expected to satisfy mission requirements.

c. (U) Changes Since As Of Date --

A Not-To-Exceed Unindefinitized Contract Action was awarded for Lot 1 of the Fire Control Radar on March 4, 1996.

8. (U) Threshold Breaches:

There are no breaches to the approved Acquisition Program Baseline dated November 27, 1995. The Fire Control Radar (FCR) end item has an Average Unit Procurement Cost Nunn-McCurdy breach which exceeds 15 percent. Official breach determination and notification correspondence was forwarded to the DoD and Congressional leadership in early March as required. Sections 12c-m contain additional details about the FCR unit cost breach.

b. (U) Previous Change Explanations --

Production milestones were delayed due to budget decrements and DAB decision to eliminate program concurrency. Verification of Apache Action Team Fixes was expected to start in September 1991 but actually started in April 1991; the completion date was originally March 1992, but completion occurred in July 1991. Force Development Test and Experimentation Phase I is not required and was removed from the Approved Program Milestones; the Force Development Data Collection Effort (completed in November 1992) provided the same end result: the development of tactics, techniques, and procedures. The First Production Delivery date was changed from Jun 97 to Mar 97 to reflect delivery of the separate end items rather than the integrated aircraft. Full Rate Production Contract Award dates were changed from Nov 97 to N/A because Low Rate and Full Rate arrangements were eliminated; a milestone was added for the Lot 1 Contract Award.

c. (U) Current Change Explanations --

(Ch-1) The Lot 1 Contract Award date is changed from Nov 95 to Dec 95 to reflect the actual date.

b. (U) Previous Change Explanations --

The Long Lead Time Items Contract Award date was changed from Nov 94 to Dec 94 to reflect the actual contract award date. The First Production Delivery date was changed from Jun 97 to Mar 97 to reflect delivery of the separate end items rather than the integrated aircraft.

c. (U) Current Change Explanations --

(Ch-1) The Lot 1 Contract Award date is changed from Nov 95 to Mar 96 to reflect the actual date.

(Ch-2) The Organic Support for Depot Level of Repair milestone was added to the Acquisition Program Baseline (dated November 27, 1995).

The objective for Ordnance Load (primary mission configuration) refers to AH-64A goal. The Longbow primary mission configuration is 8 Longbow Hellfire missiles, and 320 30mm rounds.

b. (U) Previous Change Explanations --

The number of Hellfire missiles was revised from 8 to 12 to match the key performance parameters validated by the Joint Requirements Oversight Council.

c. (U) Current Change Explanations --

(Ch-1) The Vertical Rate of Climb (VROC) current estimate is revised from 850 to 450. Based on demonstrated performance, the Project Manager estimates that the aircraft will meet or exceed the VROC objective.

(b)(1)

(Ch-3) The Operational Availability current estimate is revised from 80 to 79. The Project Manager expects that the aircraft will

| b. (U) Quantity --  | <u>Estimate</u> | <u>Program:PdE</u> | <u>Estimate</u> |
| Development (RDT&E) | 0               | 0                  | 0               |
| Procurement         | <u>758</u>      | <u>758</u>         | <u>758</u>      |
| Total               | 758             | 758                | 758             |

Note: Excludes 6 RDTE prototypes from the SAR Baseline and 6 from the Current Estimate that are not considered fully configured.

The number of LRIP units approved at the Milestone II decision was 28 Longbow Apache AH-64D aircraft. That quantity was established based on affordability considerations and the Design to Unit Production Cost (DTUPC) goal; at that time, the DTUPC was determined solely from estimates. The current procurement quantities are determined based on actual cost data and funding constraints. The formal LRIP requirement was eliminated from the Longbow program upon approval of the Acquisition Program Baseline effective March 18, 1994.

|--|--------|
| (1) Program Acquisition Cost (BY\$) -- | 1561.5 |
| (2) Program Acquisition Cost (TY\$) -- | 1497.0 |

g. (U) Unit Cost Changes.

(1) (U) PAUC --

The primary reasons for the Program Acquisition Unit Cost increase are (1) a revised estimate for System Program Management that incorporates actual data from the Engineering and Manufacturing Development (EMD) and Long Lead contracts, (2) addition of Depot Maintenance Plant Equipment that was formerly funded by DBOF, (3) a revised estimate for spares based on complete EMD data, and (4) additional nonrecurring and Engineering Change Order costs plus minor adjustments.

(2) (U) APUC --

The primary reasons for the Average Unit Procurement Cost increase are (1) a revised estimate for System Program Management that incorporates actual data from the Engineering and Manufacturing Development (EMD) and Long Lead contracts, (2) addition of Depot Maintenance Plant Equipment that was formerly funded by DBOF, (3) a revised estimate for spares based on complete EMD data, and (4) additional nonrecurring and Engineering Change Order costs plus

minor adjustments.

h. (U) Impact of Performance or Schedule Changes on Unit Cost.

None.

i. (U) Program Management and Control.

The Longbow Program Manager is COL Stephen G. Kee. The Deputy Project Manager is Mr. Gary Nenninger. The Acting Chief of the Business Management Division is Mr. William Redmond.

j. (U) Cost Control Actions.

A revised Acquisition Program Baseline incorporating the changed program cost estimates was approved in November 1995. The Project Manager is considering a multi-year procurement strategy to achieve greater cost efficiencies in the program.

k. (U) Contract Information (In Millions of Then-Year Dollars) --

- (U) (1) Contractor(s): JOINT VENTURE
- (2) Contract Title: Longbow FCR FSD
- (3) Contract Number: DAAJ09-91-C-0175
- (4) Actual Cost of Work Performed (ACWP) to date: 295.1
- (5) Percent contract completed (BCWP/target cost): 98.76
- (6) Variances:

|                                 | Cost Variance<br>(\$/%) | Schedule Variance<br>(\$/%) |

b. (U) Previous Change Explanations --

RD&E

Economic: Revised escalation indices  
Estimating: Realign all prior changes to Airframe Modifications end item. Increased scope for training/simulator development, matrix support, production engineering, test demonstration, reliability data growth testing, and functional configuration audit. A decrement to FY 95 funding caused unfavorable impact on Longbow Crew Trainer development, Functional Configuration Audit, and supplier qualification. The Tactical Engagement Simulation System was added to the program, as

13b. (U) Cost Variance Analysis (Cont'd):

Airframe Modifications

were OPTEC funds to support Initial Operational Test & Evaluation. Funds were reprogrammed to the Aviation Electronic Combat Project Manager's Office and to support Small Business Innovative Research.

Procurement

Economic: Revised escalation indices and economic adjustment for negative program change.

Schedule: The annual procurement buy profile was revised; four years were added to the program as a result of a rate reduction from 6 to 4 aircraft per month.

Estimating: Realign prior changes to Airframe Modifications end item. Revised estimate for launchers, GFE, tooling, ECOs, and hardware; change in learning curve methodology for premodification; adjustment to reconcile flyaway and support (system program management). The first unit cost increased to reflect actual prototype costs from Engineering and Manufacturing Development. An FY 95 funding decrement had negative impact on Long Lead time items, GFE avionics, and the production schedule. The estimate for launchers increased.

Support: Realign prior changes to Airframe Modifications end item. Change in method of estimating initial spares; increase in required peculiar ground support equipment; reduced data requirements after FY 2000; increased new equip training costs; addition of first destination transportation, post deployment software support, and contractor logistics support. The estimates for initial spares and peculiar support equipment were revised. Four years of support costs were added for data, contract logistics support, and matrix support due to schedule changes. The FY 95 funding decrement reduced the engine buy from 46 to 31.

b. (U) Previous Change Explanations --

RDT&E

Economic: Revised escalation indices

Estimating: Adjustment for current and prior inflation, and refining the estimate. The FY 95 funding decrement caused delays in completing component qualification and DAB-directed Test, Analyze, and Fix effort. Funds were reprogrammed to the Aviation Electronic Combat Project Manager's Office and to support Small Business Innovative Research.

LONGBOW APACHE, December 31, 1995

13b. (U) Cost Variance Analysis (Cont'd):

Fire Control Radar

Procurement

Economic: Revised escalation indices and adjustment for negative program change.

Schedule: Change in annual procurement buy schedule.

Estimating: Increases in Contractor System Program Management requirements, Design to Unit Production First Unit Cost, nonrecurring requirements including tooling, and recurring hardware. The FY 95 funding decrement caused delays to tooling and test equipment, composite manufacturing initiatives, and essential engineering change requirements. The first unit cost increased to reflect the actual prototype costs from Engineering and Manufacturing Development.

Support: Realign support costs: all training devices and support costs associated with quantity change moved to Airframe Modifications end item. Increase in Initial Spares requirements due to increase in recurring hardware costs. Increase in data requirements. Revised estimating methodology for initial spares. The estimate for other weapons system costs was revised.

The Longbow Program has a Design to Unit Production Cost (DTUPC) goal for Airframe Modifications, but does not have an approved threshold. The DTUPC goal includes prime contractor recurring manufacturing (materiel and labor). It excludes Government Furnished Equipment, Initial Production Facilities, System Test and Evaluation, and System Program Management costs included as flyaway costs. The DTUPC goal is established only for the total production quantity of 758 and does not apply at any reduced portion or early lot quantities.

The Longbow Program has a Design to Unit Production Cost (DTUPC) goal for the Fire Control Radar, but does not have an approved threshold. The DTUPC goal includes prime contractor recurring manufacturing (materiel and labor). It excludes Government Furnished Equipment, Initial Production Facilities, System Test and Evaluation, and System Program Management costs included as flyaway costs. The DTUPC Goal is established only for the total production quantity of 227 and does not apply at any reduced portion or early lot quantities.

18. (U) Operating and Support Costs:  
Airframe Modifications

a. (U) Assumptions and Ground Rules --

Assumes 592 fielded aircraft each flying 14.5 hours per month. Maintenance concept is 2 level maintenance, contractor depot support. The airframe Mean Time Between Failure (MTBF) goal is 19.5 hours at Maturity (\$0,000 flight hours). Source: Army Cost Position (Oct 1995). The Longbow aircraft system has no antecedent.
