Common Acronyms and Abbreviations for MDAP Programs

Acq O&M - Acquisition-Related Operations and Maintenance

ACAT - Acquisition Category

ADM - Acquisition Decision Memorandum

APB - Acquisition Program Baseline

APPN - Appropriation

APUC - Average Procurement Unit Cost

\$B - Billions of Dollars

BA - Budget Authority/Budget Activity

Blk - Block

BY - Base Year

CAPE - Cost Assessment and Program Evaluation

CARD - Cost Analysis Requirements Description

CDD - Capability Development Document

CLIN - Contract Line Item Number

CPD - Capability Production Document

CY - Calendar Year

DAB - Defense Acquisition Board

DAE - Defense Acquisition Executive

DAMIR - Defense Acquisition Management Information Retrieval

DoD - Department of Defense

DSN - Defense Switched Network

EMD - Engineering and Manufacturing Development

EVM - Earned Value Management

FOC - Full Operational Capability

FMS - Foreign Military Sales

FRP - Full Rate Production

FY - Fiscal Year

FYDP - Future Years Defense Program

ICE - Independent Cost Estimate

IOC - Initial Operational Capability

Inc - Increment

JROC - Joint Requirements Oversight Council

\$K - Thousands of Dollars

KPP - Key Performance Parameter

LRIP - Low Rate Initial Production

\$M - Millions of Dollars

MDA - Milestone Decision Authority

MDAP - Major Defense Acquisition Program

MILCON - Military Construction

N/A - Not Applicable

O&M - Operations and Maintenance

ORD - Operational Requirements Document

Program Information

Program Name

F-35 Lightning II Joint Strike Fighter (JSF) Program (F-35)

DoD Component

DoD

Joint Participants

United States Navy; United States Air Force; United States Marine Corps; United Kingdom; Italy; The Netherlands; Turkey; Canada; Australia; Denmark; Norway

The F-35 Program is a joint DoD program for which Service Acquisition Executive Authority alternates between the Department of the Navy (DoN) and the Department of the Air Force (DAF), and currently resides with the DAF.

Mission and Description

The F-35 Lightning II Program will develop and field an affordable, highly common family of next-generation strike aircraft for the U.S. Navy, Air Force, Marine Corps, and allies. The three variants are the F-35A; F-35B; and the F-35C. The F-35A will be a stealthy multi-role aircraft, primarily air-to-ground, for the Air Force to replace the F-16 and A-10 and complement the F-22. The F-35B variant will be a multi-role strike fighter aircraft to replace the AV-8B and F/A-18A/C/D for the Marine Corps. The F-35C will provide the U.S. Navy a multi-role, stealthy strike fighter aircraft to complement the F/A-18E/F. The planned DoD F-35 Fleet will replace the joint services' legacy fleets. The transition from multiple type/model/series to a common platform will result in a smaller total force over time and operational and overall cost efficiencies.

Executive Summary

The DoD's 2018 National Defense Strategy (NDS) outlines three central pillars in order to succeed in the emerging global security environment – Build a More Lethal Joint Force; Strengthen Alliances and Attract New Partnerships; and Reform Business Practices for Greater Performance and Affordability. Our Joint and Coalition Forces will need the capabilities and capacities of technologically superior weapon systems to out-think, out-maneuver and out-innovate the rogue regimes, violent extreme organizations and other adversarial global actors that challenge our military advantage and national security interests. The F-35 Lightning II program aligns to and directly enables the implementation of the NDS. The PB 2019 submission summarized in this SAR provides the fact-of-life changes, program wholeness and critical near term investments necessary to ensure the F-35 weapon system enables our Joint Forces' lethality, deepens our desired partnerships and aggressively drives cost out of all elements of the program to achieve affordable outcomes.

The F-35 Lightning II remains the DoD's largest cooperative acquisition program bringing together three U.S. Services - U.S. Air Force (USAF), U.S. Marine Corps (USMC), U.S. Navy (USN)) and eight Partner nations (United Kingdom, Italy, Netherlands, Turkey, Canada, Australia, Denmark, and Norway) to develop, deliver and sustain this now-demonstrated fifthgeneration strike fighter capability. In addition to these foundational partners, the program currently has three FMS customers (Israel, Korea, and Japan) with several new FMS customers showing strong interests. The F-35 is a major cornerstone in all participants' current and future air dominance strategies; however, the F-35 is more than just an aircraft. It is a complex, interdependent air system that includes the intelligence, maintenance, support, training and mission planning systems required to enable the aircraft to become an effective warfighting capability. The F-35 program continues to move at a full sprint across three interdependent lines of effort - development, production, and sustainment - to develop, deliver and sustain the complete F-35 air system. With an estimated \$1.5 trillion (TY\$) life cycle cost, the shared accountability and responsibility between the U.S. Government and F-35 industry partners to perform to plan cannot be emphasized enough as the investments by the U.S. Services, Partner nations and FMS customers constitutes a substantial portion of each of their defense budgets.

This shared accountability drives a requirement for seamless collaboration and proactive engagement between the F-35 industry partners and the F-35 Joint Program Office (JPO) for expeditious deliveries, quality products, long term growth, and affordability. The JPO needs positive engagement with all industry partners to slash timelines for technical resolutions, program plan generation, contract actions and awards, production deliveries, and sustainment solutions. The JPO will continue to work with its industry partners and incentivize them to embrace innovative and bold acquisition approaches to rapidly deliver advanced capabilities, aggressively drive down the production costs and restructure the sustainment and ownership framework to ensure our warfighters can afford to own and operate the F-35 air system well into the future.

The F-35 program had measured successes throughout 2017. The program completed Block 3 weapons testing and delivered the final planned version of Block 3F aircraft software. The program completed LRIP 9 deliveries, delivered the first F-35A AX-5 aircraft from the Japanese International Final Assembly and Check Out (FACO) facility, delivered the first F-35B BL-01 aircraft from the Italian International FACO facility and conducted the first Turkish aircraft mate. The USMC successfully executed a change of operational station to their new homeport in Japan. The USAF successfully conducted several land based deployments and Air Forces exercises. The program established initial depot repair capability in U.S. Military Service Depots, and selected four countries for Outside the Continental United States (OCONUS) depot repair. The program also stood up two Continental United States (CONUS) and three OCONUS repair sites, providing over 3,000 pieces of support equipment and enabling execution of the global pooling concept. The program reached multiple training milestones as well, surpassing 500 multinational pilots and 5,000 multinational maintainers trained since 2011. Finally, the program conducted the First Aircraft Arrival (FAA) for Norway and Italy, and declared IOC for Israel.

The program's key focus areas for 2018 include: delivering full Block 3F air system capabilities; transitioning to the Continuous Capability Development and Delivery (C2D2) framework to enable the rapid, affordable delivery of Block 4 capability; hiring the required government skill sets to support our Agile execution approach; improving aircraft quality while driving cost out of the production line and supply chain; holding F-35 industry partners accountable to the performance and

F-35 December 2017 SAR

quality outcomes we require; meeting our warfighter's expectations for Air Vehicle Availability (AVA), Mission Capable (MC) & Full Mission Capable (FMC) rates; aggressively reducing ownership cost (\$/tail/year, \$/flying hour); and reaching FAA for Australia and IOC for the USN and United Kingdom. The following paragraphs provide further details on the accomplishments and look-ahead efforts across our three lines of effort - development, production, sustainment – supported by our F-35 PB2019 submission.

Development

After the 2011 re-baseline, the development effort associated with the delivery of full Block 3F Capabilities has stabilized, and we are currently on track to deliver the full Block 3F capabilities by February, May, and June 2018 for the F-35A, F-35B, and F-35C, respectively. This capability delivery will support entry into formal Initial Operational Test and Evaluation (IOT&E) in mid-2018. To ensure the F-35 remains a relevant, capable warfighting platform, the Block 4 capability requirements were defined, refined and approved by the U.S. Services and Partner nations. This process culminated in their formal endorsement in an F-35 Decision Memorandum 90 signed March 2016, and a JROC Memorandum signed October 2017, validating the U.S. Services CDD. With the requirements defined and validated, the F-35 JPO determined that legacy linear development and delivery approaches could not deliver the required capability on the required timeline at available funding levels, and as such, initiated a new capability delivery methodology known as the C2D2 framework. This effort reflects a shift to a more agile process that enables the F-35 enterprise to incrementally develop, integrate, test, and make available for delivery the full Block 4 capability set on an operationally-relevant timeline. The full and proactive cooperation of the F-35 prime contractor is a critical enabler to this transition. The JPO will continue to work collaboratively with the prime contractor to encourage the dramatic shift in systems engineering and business behaviors and practices required to enable an effective transition to the C2D2 framework. While we are still establishing the C2D2 framework, systems engineering work has begun on a subset of the F-35 Block 4 capabilities using contract vehicles initiated under our legacy approach. System Functional Review for these capabilities was held in late 2017; these elements are focused on maintaining viability against evolving threats, upgrading and improving System Development and Demonstration (SDD) delivered Block 3F capabilities, reducing life cycle costs and improving operational suitability. The near-term focus of the Block 4 upgrades includes improved engagement of moving targets, maritime mission enhancements, future air and surface threats, and ability to execute discreet Intelligence, Surveillance and Reconnaissance (ISR) missions.

Since the C2D2 framework leverages the tenets of agile development and is relatively new within the F-35 program, it will require the development and use of new or alternative cost estimating methodologies and approaches. Until then, F-35 JPO developmental cost estimates will continue to be based on traditional DoD cost estimating methodologies and approaches to software and capability development efforts coupled with historical, or actual, experiences. Generated with legacy cost estimating methods, the program's FY 2018 and FY 2019 estimates still possess a high degree of fidelity with regard to required near-term Block 4 activities; however, estimates for FY 2020 and beyond should be considered to be more conservative. As the C2D2 approach and our new cost estimating methodologies mature over time, the JPO will continuously evaluate the program cost impact and update the cost estimate(s) so that subsequent updates will include a full, high fidelity cost estimate(s) across the FYDP and beyond.

Since the program plans to adopt an agile project management and technical practices framework to support the C2D2 methodology, program documentation will be developed as appropriate to satisfy all regulatory and statutory requirements. The new agile C2D2 methodology will, to the greatest extent possible, exchange those regulatory and statutory requirements with comprehensive design, implementation, and test artifacts throughout the development process in order to maintain a high level of systems engineering rigor. As this methodology evolves, the program will communicate 'real time' with the Congressional Defense Committee staffs through quarterly PEO and DAE engagements, and provide the annual Follow-on Modernization report required by Section 224(b) of the National Defense Authorization Act for FY 2017 (Public Law 114-328). RDT&E costs in this SAR exclude C2D2 and follow-on modernization effort funding contained in the following projects: F-35B/C Sustainment/Capability enhancements; F-35A Deployability and Suitability enhancements; and F-35A Dual Capable Aircraft enhancements. C2D2 and other modernization costs are not included in this SAR, but will be included once the program and its Acquisition Strategy and baseline are reviewed and approved by the Milestone Decision Authority.

Production

The program delivered 66 aircraft and achieved its planned delivery goal – though not necessarily all its intermediate monthly contractual goals – for 2017. In 2018, the goal is to deliver a total of 91 aircraft. Of those 91 aircraft, 85 aircraft will

be delivered from the Fort Worth FACO, 2 aircraft from the Italian FACO and 4 aircraft from the Japanese FACO. The JPO continues to experience slow negotiation behaviors from the prime contractor that unnecessarily extends the time line to contract award. As production ramps up, the JPO has concerns with the prime contractor's ability to negotiate in a timely manner to meet required delivery schedules with the required quality and performance. The JPO is incentivizing the prime contractor's behavior through appropriate contracts and other methods to improve production systems, to reduce span times, improve quality and reduce costs.

The JPO is keenly focused on aggressively reducing the cost to produce the F-35, and is leading a multi-agency Cost Deep Dive with support from experts across OSD, the U.S. Services, and industry. The two main objectives of this effort are to establish a common cost data repository and identify proposed production line efficiency initiatives. Through on-site production line assessments of the F-35 prime contractor and its top 100 suppliers, this Deep Dive will build a knowledge base that allows the DoD and the prime contractor to fully understand what drives the cost of producing a F-35. This common cost data repository will be refreshed annually and used to negotiate a fair and reasonable price for our U.S. Services and Partner nations. Additionally, as each production line assessment is conducted across the supplier base, the team will highlight production line efficiencies that, when implemented, will further reduce the F-35 production costs to be competitive with 4th generation alternatives. It is imperative that the F-35 industry base embrace these recommendations to achieve the associated cost benefits.

The current U.S. Services' F-35 total procurement quantity reflected in the SAR remains 2456 with the following breakout: USAF – 1763 F-35A, USMC – 353 F-35B and 67 F-35C, and USN 273 F-35C. This procurement quantity and breakout is the same as the PB 2018 submission and last year's SAR. The current production profile for the U.S. Services assumes annual lot-by-lot procurements leveraging Economic Order Quantity (EOQ) investments between FY 2018-2020. From FY 2021 to the end of the program, the USAF production profile assumes one 3-year multi-year procurement (FY 2021-FY 2023) followed by successive 5-year multi-year procurements beginning in FY2024, with the required EOQ investments and associated savings. The Department of Navy (DoN) did not include EOQ funding in the PB 2019 submission for a multi-year in FY 2021-2023 for either the F-35B or F-35C. The DoN plans to reassess that decision in the coming FY 2020 budget cycle. Therefore, the DoN PB 2019 production profile assumes annual procurements from FY 2021-2023, followed by successive 5-year multi-year procurements from FY 2024 to the end of the program with necessary EOQ investments and associated savings.

Sustainment

The O&S section of the SAR reflects the 2015 CAPE ICE update. The F-35 JPO has updated the program office portion of the narrative in the O&S section with its current estimates. Although not reflected in the O&S section, the updated Fiscal Years in Service are FY 2011 - FY 2077.

The F-35 Enterprise is in full stride standing up the Global Support Solution (GSS) to provide cost effective, safe and timely Maintenance, Repair, Overhaul and Upgrade (MRO&U) within a three-region framework (Europe, Pacific, and North America) for airframe, engine, component, warehousing, and distribution. As of January 16 2018, the F-35 Enterprise consisted of 268 fielded aircraft; during the next five years, another 670+ aircraft are expected to be delivered and fielded. The global sustainability posture (including both readiness and cost) relies on a common pool of spares and support equipment, common pilot and maintainer training, and common engineering support. Unique country-specific requirements and capabilities are provided via Afloat and Deployable Spares Packages (ASP/DSP) requirements at U.S. Service, Partner nations, and FMS-unique cost.

At current estimates, the projected F-35 sustainment outlays are too costly. Given planned fleet growth, future U.S. Service O&S budgets will be strained. The prime contractor must embrace much-needed supply chain management affordability initiatives, optimize priorities across the supply chain for spare and new production parts, and enable the exchange of necessary data rights to implement the required stand-up of planned government organic software capabilities. The program is establishing and validating affordability goals and required actionable initiatives to realize them; focusing on cost reduction efforts, capacity tradeoffs, reallocation of Industry/Government workshare and alignment within U.S. Services' Budgets. Achieving these goals will require updates to product support and sustainment strategies, including the Life-cycle Support Plan (LCSP) and supporting Business Case Analyses (BCA) to address fielding and sustainment performance improvements. The Program is using Performance Based Logistics (PBL) principles, manifested in GSS and related enterprise capabilities, to maximize warfighter performance while working within participant resource constraints. In 2016,

the F-35 Lightning II program began including PBL elements in Lockheed Martin sustainment contracts, in order to drive contractor behavior, through performance-based incentives on Fleet operational performance metrics. The Program executed a multiple-year contract with Pratt & Whitney for FY 2017-FY 2019, which implements PBL principles with appropriate incentives. To move to full PBL for the F-35 Air System by FY 2025, the program will continue this initial PBL implementation phase with Lockheed Martin, using incentives for selected performance metrics in a single-year FY 2020 and a multiple-year contract for FY 2021-FY 2025.

The objective will be to meet warfighter operational requirements at CONUS and forward deployed locations by delivering: affordable sustainment for the F-35 within the U.S. Services budgets; stabilized Autonomic Logistics Information System (ALIS) and Information Technology (IT) architecture that is protected from cybersecurity threats; increased transparency; and expanded warfighter roles to enable frequent and detailed discussions to align with U.S. Service priorities and link budgetary decisions to F-35 sustainment strategies.

Looking ahead to 2018

2018 is on track to be another productive and challenging year. It is a year of transition, as the program shifts its development line of effort from legacy SDD processes to a new capability delivery paradigm with C2D2. In the production line of effort, the program is driving affordability into the F-35 prime contractor's production line and global supply chain via the Cost Deep Dive initiative even as that production line climbs its aggressive ramp to almost 100 aircraft per year. In sustainment, the program is driving cost-effective performance through affordability initiatives while it builds and reinforces a global supply chain and distribution network to hit U.S. Service and Partner nation cost and performance targets. Simultaneously, the F-35 JPO is targeting a needed shift in contractor performance through a renewed emphasis on cost and performance-focused incentives that encourages behavior changes to support our affordability and performance mandates. This shared accountability between U.S. Government and Industry partners is vital for F-35 long term success. Our warfighters will continue to accept F-35 air systems establishing new bed down sites, both land based and maritime, as they continue to mature their warfighting concept of operations to be prepared to fight the fight when called upon. The F-35 demands an extraordinary amount of our nation's resources in order to operate and the JPO is working daily to ensure the F-35 remains an affordable, lethal and effective war-winning platform in support of our NDS.

F-35 December 2017 SAR

Change Explanations

(Ch-1) This is the SDD end state for F-35 KPPs. Aero performance related values are final SDD assessments.

(Ch-2) This is the SDD end state for F-35 KPPs. Aero performance related values are final SDD assessments.

(Ch-3) This is the SDD end state for F-35 KPPs. Aero performance related values are final SDD assessments.

Acronyms and Abbreviations

ASD - Average Sortie Duration

CTOL - Conventional Takeoff and Landing

CU FT - Cubic Feet

CV - Aircraft Carrier Suitable Variant

JDAM - Joint Direct Attack Munitions

KTS - Knots

NM - Nautical Miles

RCLW - Required Carrier Landing Weight

SGR - Sortie Generation Rate

ST - Short Tons

STO - Short Takeoff

STOVL - Short Takeoff and Vertical Landing

Vpa - Max Approach Speed

WOD - Wind Over the Deck

Notes

Performance characteristics for the F-35 Engine subprogram are captured as part of the system-level performance characteristics reflected in the F-35 Aircraft subprogram.

Track to Budget

F-35 Aircraft

General Notes

F-35 is DoD's largest cooperative development program. In addition to DoD's funding lines, eight International Partners are providing funding in the System Development and Demonstration (SDD) Phase under a Memorandum of Understanding (MOU): United Kingdom, Italy, The Netherlands, Turkey, Canada, Australia, Denmark, and Norway. All but Turkey and Australia were partners in the prior phase. Associated financial contributions are reflected in the Annual Funding section as Appropriation 9999, RDT&E Non-Treasury Funds. RDT&E cost excludes Continuous Capability Development and Delivery (C2D2) Block 4 Funding; F-35B/C Sustainment/Capability Enhancements; F-35A Deployability and Suitability Enhancements; and F-35A Dual Capable Aircraft Enhancements.

Current APB Cost Estimate Reference

Cost Assessment and Program Evaluation (CAPE) Independent Cost Estimate (ICE) dated March 09, 2012

Cost Notes

In accordance with Section 842 of the National Defense Authorization Act for FY 2017, which amended title 10 U.S.C. § 2334, the Director of Cost Assessment and Program Evaluation, and the Secretary of the military department concerned or the head of the Defense Agency concerned, must issue guidance requiring a discussion of risk, the potential impacts of risk on program costs, and approaches to mitigate risk in cost estimates for MDAPs and major subprograms. The information required by the guidance is to be reported in each SAR. This guidance is not yet available; therefore, the information on cost risk is not contained in this SAR.

| Total Quantity - F-35 Aircraft | | | | | | | | |
|--------------------------------|---|----------------------------|------------------|--|--|--|--|--|
| Quantity | SAR Baseline Development Estimate | Current APB Development | Current Estimate | | | | | |
| RDT&E | 14 | 14 | 14 | | | | | |
| Procurement | 2443 | 2443 | 2456 | | | | | |
| Total | 2457 | 2457 | 2470 | | | | | |

Quantity Notes

The current estimate for F-35 total procurement quantity increase from 2443 to 2456 has not changed from SAR 2016 to SAR 2017. This increase was the result of two changes: a USMC variant mixture change between the F-35B and F-35C (13 additional F-35Bs and 13 less F-35Cs), and the Department of Navy (DoN) decision to continue to procure a total of 340 F-35C aircraft. This results in a net increase of 13 F-35B aircraft. The increase is reflected in both the aircraft and engine subprogram and results in a change from 680 to 693 in the DoN Aircraft Procurement accounts. The USMC validated their requirement through the Marine Corps Requirements Oversight Council (MROC).

The DoD average F-35 Aircraft Unit Recurring Flyaway (URF) Cost consists of the Hardware (Airframe, Vehicle Systems, Mission Systems, and Engineering Change Order) costs over the life of the program. The URF assumes the quantity benefits of 132 FMS aircraft and 609 International Partner aircraft.

The current estimate for F-35 total procurement quantity increase from 2443 to 2456 has not changed from SAR 2016 to SAR 2017. This increase was the result of two changes: a USMC variant mixture change between the F-35B and F-35C (13 additional F-35Bs and 13 less F-35Cs), and the Department of Navy (DoN) decision to continue to procure a total of 340 F-35C aircraft. This results in a net increase of 13 F-35B aircraft. The increase is reflected in both the aircraft and engine subprogram and results in a change from 680 to 693 in the DoN Aircraft Procurement accounts. The USMC validated their requirement through the Marine Corps Requirements Oversight Council (MROC).

F-35A (Conventional Take Off and Landing) URF - \$67.6M (BY 2012)

F-35B (Short Takeoff and Vertical Landing) URF - \$77.4M (BY 2012)

F-35C (Carrier Variant) URF - \$78.7M (BY 2012)

The DoD average F-35 Engine Unit Recurring Flyaway (URF) Cost consists of the Hardware (Propulsion and Engineering Change Order) costs over the life of the program. The URF assumes the quantity benefits of 132 FMS engines and 609 International Partner engines.

The current estimate for F-35 total procurement quantity increase from 2443 to 2456 has not changed from SAR 2016 to SAR 2017. This increase was the result of two changes: a USMC variant mixture change between the F-35B and F-35C (13 additional F-35Bs and 13 less F-35Cs), and the Department of Navy (DoN) decision to continue to procure a total of 340 F-35C aircraft. This results in a net increase of 13 F-35B aircraft. The increase is reflected in both the aircraft and engine subprogram and results in a change from 680 to 693 in the DoN Aircraft Procurement accounts. The USMC validated their requirement through the Marine Corps Requirements Oversight Council (MROC).

| Target | Ceiling | Qty | Target | Ceiling | Qty | Contractor | Program Manager |
| 738.0 | N/A | 57 | 7040.4 | N/A | 57 | 7030.4 | 7030.4 |

Target Price Change Explanation

The difference between the Initial Contract Price Target and the Current Contract Price Target is due to definitization of the LRIP 9 Production effort. Initial Contract Price consisted primarily of Long Lead material and Production Non-Recurring Tooling. The difference between the previous SAR Target Price and the Current Target price is driven by increased scope awarded for Blueprint for Affordability tasks and definitization of the Italy aircraft.

| Contract Variance | | | | | | |
|---|---------------|-------------------|--|--|--|--|
| Item | Cost Variance | Schedule Variance | | | | |
| Cumulative Variances To Date (12/31/2017) | -52.0 | -141.0 | | | | |
| Previous Cumulative Variances | -51.0 | -118.0 | | | | |
| Net Change | -1.0 | -23.0 | | | | |

Cost and Schedule Variance Explanations

The unfavorable net change in the cost variance is due to the correction of data errors associated with affordability tasks and Mission Systems hardware.

The unfavorable net change in the schedule variance is due to schedule recovery for Radar subsystems and Mission Systems tooling.

Notes

As a whole, the CLIN consist of multiple contract types including Fixed Price Incentive Fee as well as Cost Plus Incentive Fee and Cost Plus Fixed-Fee. For this reason, the overall contract type is mixed and there is not a true contract ceiling.

The first Undefinitized Contract Action Integrated Program Management Report submittal was received in month-end May 2016. To date, 57 of 57 aircraft have been delivered as of December 2017.

Contract Award Date updated from SAR 2016 due to data entry error.

Contract Identification

Appropriation: Procurement

Contract Name: F-35 LRIP 10

Contractor: Lockheed Martin

Contractor Location: 1 Lockheed Boulevard

Fort Worth, TX 76101

Contract Number: N00019-15-C-0003

Contract Type: Fixed Price Incentive(Firm Target) (FPIF), Cost Plus Fixed Fee (CPFF)

Award Date: February 28, 2013

Definitization Date: June 01, 2017

| | | | | Contract Pri | ce | | |
|------------|------------------------------|-----|--------|------------------------------|-----|------------|-----------------------|
| Initial Co | Initial Contract Price (\$M) | | | Current Contract Price (\$M) | | | e At Completion (\$M) |
| Target | Ceiling | Qty | Target | Ceiling | Qty | Contractor | Program Manager |
| 25.4 | N/A | 94 | 8781.4 | N/A | 94 | 9065.2 | 8781. |

Target Price Change Explanation

The difference between the Initial Contract Price Target and the Current Contract Price Target is due to definitization of the LRIP 10 Production effort. Initial Contract Price consisted primarily of Long Lead material.

| Contract Variance | | | | | | |
|---|---------------|-------------------|--|--|--|--|
| Item | Cost Variance | Schedule Variance | | | | |
| Cumulative Variances To Date (12/31/2017) | -114.0 | +5.0 | | | | |
| Previous Cumulative Variances | | 4 | | | | |
| Net Change | -114.0 | +5.0 | | | | |

Cost and Schedule Variance Explanations

The unfavorable cumulative cost variance is due to assembly labor due to higher than anticipated volumes of out of station work, part shortages, and inefficiencies associated with the influx of new employees and the associated learning curve.

The favorable cumulative schedule variance is due to high dollar production parts issuing to the aircraft ahead of schedule.

Notes

This is the first time this contract is being reported.

Overall, the LRIP 10 contract is tracking slighlty behind schedule with 25 of 94 aircraft currently projected to miss their contractual DD250 dates.

| 466.7 | 469.5 | 67 | 1542.6 | 1542.6 | 67 | 1519.9 | 1437. |

Target Price Change Explanation

The difference between the Initial Contract Price Target and the Current Contract Price Target is due to definitization of the production effort and Non-recurring Sustainment work scope. Initial Contract Price consisted primarily of Long Lead material, unique non-recurring depot activation and initial common depot spares.

| Contract Variance | | | | | |
|---|---------------|-------------------|--|--|--|
| Item | Cost Variance | Schedule Variance | | | |
| Cumulative Variances To Date (12/31/2017) | -137.0 | -59.0 | | | |
| Previous Cumulative Variances | 100 | | | | |
| Net Change | -137.0 | -59.0 | | | |

Cost and Schedule Variance Explanations

The unfavorable cumulative cost variance is due to engine hardware costing more than planned due to delays with the incorporating enough affordability initiatives to lower the manufacturing costs. Additionally, a retroactive 2017 General and Administrative unfavorable rate increase was implemented.

The unfavorable cumulative schedule variance is due to spare power and fan modules delivery delays; and delays with initial Depot Activation for the Netherlands, Turkey and Norway. Additionally, the United States depot activation is late due to the Eddy Current Inspection development work.

Notes

This is the first time this contract is being reported.

To date, 67 out 67 engines are delivered.

| 370.6 | 377.3 | 104 | 2215.1 | 2261.4 | 104 | 2207.0 | 2215. |

Target Price Change Explanation

The difference between the Initial Contract Price Target and the Current Contract Price Target is due to definitization of the production effort and Sustainment work scope.

| Contract Variance | | | | | |
|---|---------------|-------------------|--|--|--|
| Item | Cost Variance | Schedule Variance | | | |
| Cumulative Variances To Date (12/31/2017) | -163.0 | -137.0 | | | |
| Previous Cumulative Variances | -43.0 | -51.0 | | | |
| Net Change | -120.0 | -86.0 | | | |

Cost and Schedule Variance Explanations

The unfavorable net change in the cost variance is due to the engine hardware costing more than planned due delays with the incorporating enough affordability initiatives to lower the manufacturing costs. Additionally, a retroactive 2017 General and Administrative unfavorable rate increase was implemented.

The unfavorable net change in the schedule variance is due to engine hardware late to the baseline plan due to the complexity in manufacturing of parts, coating delays with the Nozzle flaps and hardware being re-allocated to a higher priority. Additionally, depot activation training assets are late.

Notes

As a whole, the CLIN consist of multiple contract types including Fixed Price Incentive Fee as well as Cost Plus Incentive Fee and Cost Plus Fixed-Fee. For this reason, the overall contract type is mixed and there is not a true contract ceiling.

To date, 37 out 104 engines are delivered.

Contract award date updated from SAR 2016 due to data entry error.

The LRIP 10 engine quantity changing from 102 in SAR 2016 to 104 in SAR 2017 was due to a contract modification in June 2017 that added two Italian engines.

| 431.3 | N/A | N/A | 1519.8 | N/A | N/A | 1384.3 | 1519. |

Target Price Change Explanation

The difference between the Initial Contract Price Target and the Current Contract Price Target is due to definitization of FY 2016 Annualized Sustainment effort.

| Contract Variance | | | | | |
|---|---------------|-------------------|--|--|--|
| Item | Cost Variance | Schedule Variance | | | |
| Cumulative Variances To Date (12/31/2017) | +78.0 | -66.0 | | | |
| Previous Cumulative Variances | - | - | | | |
| Net Change | +78.0 | -66.0 | | | |

Cost and Schedule Variance Explanations

The favorable cumulative cost variance is due to staffing underruns within LM RMS and Program Management; and also due to executing and managing multiple sustainment contracts concurrently (improved efficiency/productivity and more favorable bulk pricing).

The unfavorable cumulative schedule variance is due to late deliveries of repairs, replenishments, and consumables; additionally there have been delayed deliveries of training devices and support equipment.

Notes

This is the first time this contract is being reported.

The contract appropriations include Procurement and O&M.

Contract Identification

Appropriation: Procurement

Contract Name: FY17 Annualized Sustainment

Contractor: Lockheed Martin

Contractor Location: 1 Lockheed Boulevard

Ft. Worth, TX 76108

Contract Number: N00019-17-C-0045

Cost Plus Incentive Fee (CPIF), Cost Plus Award Fee (CPAF)

Award Date: February 28, 2017

Definitization Date: May 03, 2017

| | | | | Contract Pri | ce | | |
|------------------------------|---------|------|------------------------------|--------------|-----|-------------------------------------|-----------------|
| Initial Contract Price (\$M) | | \$M) | Current Contract Price (\$M) | | | Estimated Price At Completion (\$M) | |
| Target | Ceiling | Qty | Target | Ceiling | Qty | Contractor | Program Manager |
| 1049.9 | N/A | N/A | 1322.0 | N/A | N/A | 1255.5 | 1322 |

Target Price Change Explanation

The difference between the Initial Contract Price Target and the Current Contract Price Target is due to the Initial Contract Price was for the 10-month base period (March thru December 2017); the Current Contract Price increase is driven by the executed Option for two additional months (January to February 2018).

| Contract Variance | | | | | |
|---|---------------|-------------------|--|--|--|
| Item | Cost Variance | Schedule Variance | | | |
| Cumulative Variances To Date (12/31/2017) | +38.0 | -34.0 | | | |
| Previous Cumulative Variances | - | 2. | | | |
| Net Change | +38.0 | -34.0 | | | |

Cost and Schedule Variance Explanations

The favorable cumulative cost variance is due to delayed staffing, deferred hiring, labor rate underruns, and increased efficiencies.

The unfavorable cumulative schedule variance is due to repair and replenishment order materials being delivered late to the baselined Purchase Order delivery dates; repairs are increasing in complexity and repair parts have significant lead time since funded lay-in material is not readily available.

Notes

This is the first time this contract is being reported.

The contract appropriation includes Procurement and O&M.

Operating and Support Cost

F-35 Aircraft

Cost Estimate Details

Date of Estimate: March 07, 2016
Source of Estimate: CAPE ICE

Quantity to Sustain: 2443

Unit of Measure: Flying Hour Service Life per Unit: 30.00 Years

Fiscal Years in Service: FY 2011 - FY 2070

The 14 developmental aircraft will not be sustained. The CAPE ICE does not include the 13 US Marine Corps F-35B aircraft added in the FY 2018 PB.

Sustainment Strategy

The F-35 Product Support Manager (PSM) has developed and is executing a Sustainment Strategy that is consistent with warfighter requirements, technical specifications, extant contracts, government policies, and best practices. The F-35 Sustainment Strategy expressly states that the F-35 Program will:

- Design, develop, deliver and sustain a single, integrated, and global system of sustainment products, processes, and business practices. These actions will enable the F-35 Air System to achieve a high degree of effectiveness at an affordable cost.
- Tailor the global system to meet warfighter-defined and PSM-supported readiness and cost objectives. This action will ensure that the global system is responsive and flexible as operational needs vary over time.
- Maintain life-cycle focus, including the reduction of costs. This action will provide critical affordability benefits and further supports a high degree of effectiveness as Air System maturity grows.
- Create a mutually-beneficial enterprise that with relevant metrics and incentives operates, manages, and supports the global system. This action further improves responsiveness and enhances affordability.
- Leverage the global resource base government and commercial to take advantage of stakeholder capabilities, human capital, best practices, and similar critical contributions. This action increases robustness and scalability as the F -35 fleet grows and matures.

Antecedent Information

The F-35 family of aircraft variants will replace the following current aircraft: F-16C/D, A-10, F/A-18C/D, and AV-8B. The F-35 O&S estimate is based on legacy fleet history only when F-35 specific data is not available.

Comparing the costs of the 5th Generation F-35 to legacy aircraft is challenging. The cost table compares an adjusted F-16C/D Cost per Flying Hour (CPFH) to a forecast of the CPFH for the F-35A variant. The F-35A CPFH figure is based on the Conventional Takeoff and Landing (CTOL) variant only. The F-35A CTOL variant will make up the majority of the DoD F-35 aircraft procurement, accounting for 1,763 of 2,456 total aircraft currently planned for U.S. forces.

The F-16C/D CPFH figures were developed in a joint effort between CAPE and the Air Force Cost Analysis Agency. The

figures have been normalized for comparison to the F-35A CPFH forecast. The starting point for the F-16C/D CPFH is an average of actual cost incurred for this fleet during FY 2008 through FY 2010. In order to enable the direct comparison of the CPFH figures, the actual F-16C/D CPFH is adjusted to reflect the cost of fuel, the number of flight hours forecast for the F-35A, and FY 2013 inflation indices. The F-16C/D figures include costs that F-16 shares with other Air Force platforms: Systems Engineering/Program Management (SEPM), maintenance training costs, certain software development efforts, and information systems. Costs for mission planning are included in the F-35A CPFH figure, but equivalent costs for the F-16C/D are not available, and no adjustment was made for this element of cost. Finally, the F-16C/D figures assume full funding of requirements consistent with the F-35A CPFH figures.

| | Annual O&S Costs BY2012 \$K | |
|--------------------------------|---|---|
| Cost Element | F-35 Aircraft Average Annual Cost Per Flying Hour | F-16C/D (Antecedent) Cost Per Flying Hour (\$) |
| Unit-Level Manpower | 8.000 | 10.000 |
| Unit Operations | 5.000 | 6.000 |
| Maintenance | 11.000 | 6.000 |
| Sustaining Support | 3.000 | 2.000 |
| Continuing System Improvements | 2.000 | 2.000 |
| Indirect Support | 0.000 | 0.000 |
| Other | 0.000 | 0.000 |
| Total | 29.000 | 26.000 |

The F-35 CAPE ICE is unchanged from the December 2015 SAR.

Given the significant increase in military capabilities provided, it is reasonable to expect F-35A to cost more to operate and sustain than 4th generation legacy aircraft.

| | Total O&S Cost \$M | | | |
|-----------|---|----------|------------------|----------------------|
| Item | F-35 Aircraft | | | |
| | Current Development Al Objective/Threshold | | Current Estimate | F-16C/D (Antecedent) |
| Base Year | 617000.0 | 678700.0 | 620805.4 | N/A |
| Then Year | 1113272.6 | N/A | 1123844.0 | N/A |

The Total O&S Cost figures reflect the CAPE ICE. The O&S cost estimate includes all three U.S. aircraft variants, is based on a forecast 30-year service-life, and is based on planned usage rates provided by each relevant military service. The planned F-35 usage rates, in terms of aircraft flight hours per year, are as follows: F-35A @ 250 hrs./yr.; F-35B @ 302 hrs./yr.; and F-35C @ 316 hrs./yr. The O&S cost estimate is not a simple extrapolation of the F-35A flying hour cost shown in the unitized O&S cost table. The CAPE ICE uses FY 2015 inflation indices, and includes revised forecasts of labor escalation rates for military, civilian, and contractor personnel. A comparable total cost figure for the antecedent system (i.e., F-16C/D) is not available.

In PB19, the Department of the Navy (DoN) funded the development and implementation of intermediate level (I-Level) repair capabilities and therefore changed the program of record (POR). The CAPE ICE currently does not include I-Level maintenance costs for the DoN. However, once the concept of operations is codified by the program office, CAPE will quantify the associated costs and/or savings in a future update of the ICE.

The CAPE ICE O&S cost estimate incorporates actual information on component reliabilities obtained from the ongoing F -35 flight operations, including flight test and field operations. This program information is provided from the DoD test community, through Director, Operational Test and Evaluation, and includes actual reliability information on many F-35 components based on data collected during approximately 31,000 hours of flight operations. The data include all variants and flight operations through May 2015.

The reliability information has been compared to expected reliabilities for this stage of the program, for all variants, based on reliability growth curves. The CAPE ICE O&S estimate continues to reflect the increased Depot Level Repair (DLR) costs present in the 2014 SAR estimate, because component reliability information obtained from actual flight operations data remains inconsistent with expectations.

CAPE will continue to work with the DoD operational test community to improve the processes and methods used to incorporate actual data and information on component reliabilities and removal rates, obtained from ongoing flight operations, into the CAPE life-cycle O&S cost estimate for the F-35 program. This information will be used, together with reliability improvement forecasts, to update the O&S cost estimates as the program proceeds to and beyond IOC. In the future, the use of actual flight operations information could result in substantial changes in forecasts of DLR costs in CAPE O&S estimates.

Affordability remains the F-35 program office number one priority. As such, the F-35 program team is focused on reducing sustainment costs across the program. The program continues to target O&S cost avoidance through the Affordability War Room (AWR) and Reliability and Maintainability Improvement Program (RMIP). Concurrent to AWR activity, the program office has taken strides to transition from analogy and parametric estimating approaches toward contracted values to improve the O&S cost estimate's accuracy. As a result of AWR affordability initiatives, requirement refinement, and improved cost data quality, the program has reduced the program's annual cost per flight hour.

The O&S Program Office Estimate (POE) is captured in the 2017 Annual Cost Estimate (ACE) of \$604.0B BY 2012\$ (\$1.105 Trillion TY\$) and has been updated to reflect the latest technical baseline for the program and incorporates revised stakeholder requirements. Primary updates to the 2017 POE were to service-defined programmatic requirements.

The CAPE estimate does not incorporate the program office updates to the 2016 or 2017 ACE. The program office does not support the CAPE's use of actual reliability data from ongoing flight operations. The reliability data used in the CAPE estimate is based on a mix of aircraft configurations and represent only 9% of the hours required to reach Reliability and Maintainability maturity of the F-35 fleet. The CAPE estimate accounted for the real price change of military personnel compensation. The program office does not have a position on military personnel real price change and will incorporate once it becomes DoD guidance.

The F-35 PEO believes that the inherent differences between the F-35 and the F-16 estimates, such as mission planning costs being included in F-35 but not F-16 and the fact that the F-16 is a mature weapons system with many reliability and maintenance costs "leaned out" over the years, result in an overstating of the differences in cost per flying hour between the two. Regardless of the difference, the F-35 program office is committed to, and has enacted multiple programs to drive the O&S costs of the F-35 down.

Annual O&S Costs BY2012 \$K

| Cost Element | F-35 Aircraft | F-16C/D (Antecedent) |
|--------------------------------|---------------------------|----------------------|
| Average Annual Cost Per Flying | Cost Per Flying Hour (\$) | |
| Hour (2017 JPO ACE) | | |
| Unit-Level Manpower | 8.672 | 10.042 |
| Unit Operations | 6.108* | 5.632 |

| Maintenance | 10.310 | 5.501 |
|--------------------------------|--------|--------|
| Sustaining Support | 2.902 | 2.075 |
| Continuing System Improvements | 2.009 | 2.291 |
| Indirect Support | 0.000 | 0.000 |
| Other | 0.000 | 0.000 |
| Total | 30.005 | 25.541 |

^{*}The JPO and the CAPE use a different deflation methodology to convert costs into a BY2012\$. This results in a significantly different BY2012 fuel cost per gallon and makes the Unit Operations Cost Per Flying Hour from the JPO ACE not comparable to the CAPE estimate or the Antecedent costs.

Equation to Translate Annual Cost to Total Cost

The F-35 steady state cost per flying hour reflected in the annual O&S cost section does not easily translate to the Total O&S value for the program because the total O&S costs reflect costs for all three variants of the F-35 for the U.S. Air Force, U.S. Marine Corps, and U.S. Navy, whereas the CPFH reflects the U.S. Air Force F-35A only.
