Mission and Description

The DDG 51 Arleigh Burke Class Guided Missile Destroyer (DDG 51) is a multi-mission guided missile destroyer designed to operate offensively and defensively, independently, or as units of Carrier Strike Groups, Expeditionary Strike Groups, and Surface Action Groups in multi-threat environments that include air, surface, and subsurface threats. These ships will respond to Low Intensity Conflict/Coastal and Littoral Offshore Warfare scenarios as well as open ocean conflict providing or augmenting power projection, forward presence requirements, and escort operations at sea.

The DDG 51 Class comprises four separate variants or "Flights." DDGs 51–71 represent the original design and are designated as Flight I ships, whereas DDGs 72–78 are designated as Flight II ships and included capability upgrades such as the Joint Tactical Information Distribution System (JTIDS) Command and Control Processor, Combat Direction Finding, the Tactical Information Exchange System (TADIX B), SLQ-32(V)3, and the capability to launch and control the SM-2 Block IV Extended Range Missile. Flight IIA ships introduced new capabilities including Cooperative Engagement Capability (CEC) and a MK-45 Gun providing improved air and anti-missile defense and land attack. Flight III upgrades are centered on the Air and Missile Defense Radar (AMDR) AN/SPY-6(V)1 that enables Flight III ships to simultaneously perform Anti-Air Warfare (AAW) and Ballistic Missile Defense (BMD), which satisfies the Navy's critical need for an enhanced surface combatant Integrated Air and Missile Defense (IAMD) capability.

The DDG 51 Class ships provide outstanding combat capability and survivability characteristics while considering procurement and lifetime support costs. They feature extraordinary seakeeping and low observability characteristics. The DDG 51 features the AEGIS Weapon System (AWS), which has quick reaction time, high firepower, and improved Electronic Countermeasures capability in Anti-Air Warfare (AAW). The ships' Anti-Submarine Warfare (ASW) System provides superior long range multi-target detection and engagement capability with two embarked Light Airborne MultiPurpose System MK-III helicopters (DDG 79 and follow-on ships). The Advanced Tomahawk Weapon Control System (DDGs 79-95) and the Tactical Tomahawk Weapons Control System (DDG 96 and follow-on ships) allow employment of multiple variants of Tomahawk missiles for strike warfare. The MK-45 gun weapon system provides significant capability for surface warfare, land attack, and air defense. The CEC is being installed on DDG 51 Class Ships to promote Network Centric Warfare capability. The AWS is the heart of an integrated combat system that provides area coverage and command/control focus in all dimensions of Naval Warfighting and Joint Military Operations: AAW; ASW; Anti-Surface Warfare; Command, Control, Communications, Computers & Intelligence; and Strike Warfare. DDG 113 and follow ships will provide IAMD and work with other BMD assets.

The AWS for Flight III comprises the AN/SPY-6(V)1 radar system, Command and Decision System MK 2, Weapons Control System MK 7, Missile Fire Control System MK 99, Operational Readiness and Test System MK 9, AEGIS Display System MK 2, AEGIS Computer Programs, Advanced Training Domain, and Logistic Support System.

Executive Summary

Program Highlights Since Last Report

The DDG 51 Program has successfully delivered 67 ships since program inception in 1985. The program is currently in serial production with nine ships under construction and a total of 21 under contract at two current DDG 51 class shipbuilders, Huntington Ingalls Industries – Ingalls Shipbuilding (HII Ingalls) and General Dynamics - Bath Iron Works (GD BIW), as of this report date.

The Navy has instituted several initiatives to continually manage cost associated with DDG 51 Class ships including the increased use of competitive contracts in lieu of sole source contracts. Other cost savings initiatives include the use of competitive Multi-Year Procurement (MYP) contracts, refurbished assets from retiring Navy ships and leveraging Government Furnished Equipment (GFE) contracts across multiple ship classes to obtain better prices across the Navy.

The Navy is currently procuring Flight III ships which will provide enhanced surface combatant Integrated Air Missile Defense (IAMD) capability. The Flight III baseline consists of the integration of the AN/SPY-6(V)1 radar along with upgrades to the electrical power and cooling capacity plus additional associated changes. The Flight III baseline begins with DDGs 125-126 (FY 2017 hulls) and will continue with DDG 128 (FY 2018) and follow. DDG 125 started fabrication on May 07, 2018.

The Navy awarded two contracts for the DDG 51 FY 2018 - 2022 MYP for a total of 10 Flight III destroyers on September 27, 2018. The MYP continues the procurement for the proven DDG 51 Class shipbuilding program, leveraging competition, a strong industrial base and a stable design in order to achieve savings. On December 21, 2018, the Navy awarded the FY 2019 option ship appropriated in the FY 2019 Consolidated Appropriations Act (P.L. 115-245) to GD BIW, bringing the total number of Flight III ships on contract to 13.

Congress reduced the DDG 51 Shipbuilding and Conversion, Navy (SCN) FY 2019 budget request by \$3.5 million for excess electronics growth and added \$250 million in Advance Procurement (AP) for an additional FY 2020 ship. Congress also rescinded \$94 million in FY 2011 and \$66 million in FY 2012 SCN funding due to efficiencies following program restart.

The PB 2020 budget requests \$5,149.3M Full Funding for three ships in FY 2020 and \$224.0M in Economic Order Quantity funds to procure ship construction material for FY 2021 and FY 2022 hulls.

The DDG 51 Class Program has achieved the following significant production milestones since the last report:

- DDG 114 (RALPH JOHNSON) Commissioned in Charleston, SC March 24, 2018.
- DDG 114 (RALPH JOHNSON) Final Contract Trials (FCT) completed September 24, 2018.

Current APB Cost Estimate Reference

Department of the Navy Component Cost Position for the DDG 51 Arleigh Burke Class Guided Missile Destroyer. The O&S cost estimates include mid-life modernization for Flight III ships. The Component Cost Position is dated March 10, 2017

Cost Notes

No cost estimate for the program has been completed in the previous year. However, the Director of Cost Assessment and Program Evaluation did provide an updated independent cost estimate for the DDG 51 multi-year procurement (MYP) in August 2018. No program risks were identified in that estimate.

Notes

Quantity numbers above reflect FMS cases, rather than ships. Cases are agreements between the United States and an eligible foreign country to provide defense articles, training, and/or services for purchase. Cases can be related to procurements (e.g., Ordalt or standard missile), training (e.g., AEGIS shipboard training or replacement crew training), and program management support (e.g., Combat System Ship Qualification Test). Case quantity numbers reflect all cases; open and closed.

Operating and Support Cost

Cost Estimate Details

Date of Estimate: January 24, 2019
Source of Estimate: NAVSEA 05C

Quantity to Sustain: 97
Unit of Measure: Ship

Service Life per Unit: 40.00 Years

Fiscal Years in Service: FY 1992 - FY 2071

Estimates are based on a service life of 35 years for the 28 Flight I and Flight II ships and 40 years for the 69 Flight IIA and Flight III ships.

Sustainment Strategy

The DDG 51 sustainment strategy leverages Third Party Planning contracts, Indefinite Delivery/Indefinite Quantity (IDIQ) multi-award contracts within a ship's homeport for Chief of Naval Operations (CNO) availabilities less than ten months and single award coast-wide Firm Fixed Priced Contracts for CNO availabilities greater than ten months. The program provides Integrated Logistics Support for hull, mechanical and electrical systems and oversight and guidance to Participating Acquisition Resource Managers that develop various sustainment approaches for combat systems and Communications, Command, Control, Computers, and Intelligence.

Antecedent Information

The Antecedent System is the CG 47 class of ships. The CG 47 class was used since it is the only other ship class with the AEGIS Weapon System installed. The CG 47 estimates were derived using the Naval Visibility And Management of Operating and Support Costs (VAMOSC) database. CG 47 estimates are based on 27 ships. The years of data used for the CG 47 class are FY 1984-2018.

| APB O&S Cost Breach | | | | | |

Disposal Cost is included in the Operating and Support Cost of the current APB objective and threshold for this program.

The DDG 51 APB is for 89 ships while the current estimate is for 97 ships.

Equation to Translate Annual Cost to Total Cost

DDG 51 (Ship Quantity X Avg. Annual Cost per Ship, per Year X Ship Service Life) (28 ships X \$34.216M X 35 years) + (69 ships X \$34.216M X 40 years) = \$127,968M

CG 47 (Ship quantity X Avg. Annual Cost per Ship, per Year X Ship Service Life)
(11 ships X \$35.733M X 40 years) + (11 ships X \$35.733M X 35 years) + (1 ship X \$35.733M X 21 years) + (2 ships X \$35.733M X 20 years) + (1 ship X \$35.733M X 19 years) + (1 ship X \$35.733M X 18 years) = \$32,982M

Disposal/Demilitarization Total Cost (BY 1987 \$M): 250.0

December 2018 SAR

The DDG 51 Class remains in full rate production and continues to be upgraded in new construction. The oldest of the class are approaching mid service life now and many are being upgraded with newer technologies which will inevitably change the cost of inactivation and disposal for the class. The ship disposal methodology has been updated to reflect the NAVSEA Update of Conventional Surface Ship Environmental and Disposal Liability Estimate (October 2017).
