(U) Executive Summary

Program Highlights Since Last Report

Requirements are steady, and funding is currently adequate to meet schedule and performance objectives. The -7 generator is now the only configuration being manufactured through both the production line Multi Year 2 and sustainment contracts. The long-term effort to address the generator problem is the development and procurement of an oil-cooled generator which Boeing has solicited proposals for. The PM will continue to conduct special quality assessments audits on generators and critical safety items.

Over the last approximately six months Boeing has experienced significant supply chain disruption to the following components: transmissions, drive-train components, gear boxes, structural components (wings, nacelles, avionics bays), main landing gear assemblies, and micro-electronics components (communication interface units, multi-purpose displays, mission data recorders, keyboard unit, and displays). Additionally, balancing sustainment demand signal and production have further complicated competition for scarce parts within the supply chain that has yet to fully recover. The Army continues to closely monitor Boeing quality via a Mission Assurance IPT following implementation of corrective action on prior Critical Safety Item material escapements. There have been no additional escapements over this reporting period. The award of Multi-Year 2 contract (MY2) constitutes the formal legal agreement between Boeing and USG on the entirety of the Army's CSI program requirement.

DCMA onsite at Boeing Mesa projects Boeing may experience delivery delays of 22 aircraft during calendar year 2024 due to raw material/part shortages, and rework efforts. In addition, reported lead times for aircraft not already on contract have grown from 36 to 50 months complicating efforts to establish follow-on production contracts without creating a gap in the production line. The PM continues to monitor the industrial base for supply chain impacts, and plan for contingencies accordingly.

The Remanufacture and New Build aircraft are procured using the same contracts, built on the same production line, and delivered in the same configuration with the same capabilities. There are no significant software-related issues with this program at this time.

| Date | Description |
|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| January 2024 | Seventh Unit Equipped is completed at 1-3 AB, Ansbach, Germany with 24 AH-64E Version 6 aircraft. |
| November 2023 | Sixth Unit Equipped (2nd National Guard unit) is completed at 1-130th AB North Carolina with 24 AH-64E Version 6 aircraft. |
| August 2023 | Started fielding Seventh Unit Equipped AH-64E Version 6 (1-3 AB, Ansbach, Germany) |
| March 2023 | Awarded AH-64E Apache MY Contract 2 for Lot 12 though Lot 15 for a base total of 115 Remanufactured aircraft, providing options to procure additional Remanufacture and New Build aircraft each year. |
| March 2023 | Started fielding Sixth Unit Equipped AH-64E Version 6 (1-130th AB, North Carolina National Guard). |
| March 2023 | Fifth Unit Equipped is completed at 2-17th Fort Campbell, KY with 24 AH-64E Version 6 aircraft. |

(U) History of Significant Developments Since Program Inception

| Date | Description |
|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| August 2022 | Started fielding Fifth Unit Equipped AH-64E Version 6 (2-17th Ft. Campbell, KY). |
| July 2022 | Fielded Fourth Unit Equipped AH-64E Version 6 (1-151st AB, South Carolina National Guard). |
| May 2022 | First Strap Pack Product Improvement (SPPI) on production line. |
| February 2022 | Fielded Third Unit Equipped AH-64E Version 6 (4-2nd AB, Korea). |
| January 2022 | First SPPI produced. |
| December 2021 | Awarded Improved Turbine Engine (ITE) Phase II contract to begin ITE integration efforts through developmental testing. |
| December 2021 | Awarded V6.5 task order to begin development program for next operational flight program update and technology insertions for common architecture for entire AH-64E fleet. |
| November 2021 | Third Unit Equipped delivery began to 4-2 AB in Korea. |
| August 2021 | Second Unit Equipped is completed at 3-17th Hunter Army Airfield, GA with 24 AH-64E aircraft. |
| June 2021 | Full Fielding Decision Brief Completed on the SPPI Program. Production line cut-in scheduled January 2022. (Completed) |
| March 2021 | V6 First Unit Equipped (FUE) is completed at 1-229th Joint Based Lewis McChord, WA with 24 AH-64E aircraft. |
| February 2021 | The first V6 Longbow Crew Trainer (LCT) retrofit was completed in the field at Hunter Army Airfield, GA. |
| December 2020 | After Boeing met the conditions-based criteria, the USG resumed accepting aircraft in December 2020. The conditions-based criteria ensure production processes meet standards for safety and quality and the potential for future quality escapes. |
| October 2020 | The US Government stopped accepting aircraft from Boeing due to quality issues identified in October 2020. |
| September 2020 | The first V6 AH-64E aircraft was DD250'd in Mesa, AZ at the Boeing facility. |
| September 2019 | The Follow-on Operational Test & Evaluation (FOT&E) 2 report was received from Army Test and Evaluation Command (ATEC). The report determined that the version 6 AH-64E is more effective, more suitable, and is incrementally more survivable than the version 4 AH-64E. The report from ATEC supports a conditional materiel release and recommends version 6 AH-64E capabilities be cut-in the AH-64E production line. |
| June 2019 | FOT&E 2 was completed on June 14, 2019. The event included operations at Ft. Hood, TX and Eglin Air Force Base (AFB) and concluded with an adversarial assessment at Redstone Arsenal. The final test report for the event was received on September 11, 2019. |
| May 2019 | Failsafe collar fielding is complete. |
| December 2018 | AH-64E Remanufacture Capability Version 6 FOT&E 2 was completed in May 2019. |
| November 2018 | The Army stopped fielding of the redesigned strap pack and began legacy strap pack collar retrofit starting with severe coastal units. All severe coastal units had fail safe collars installed April 2019 and the fail safe collar install was completed to the entire Army fleet on June 28, 2019. |
| September 2018 | PM Apache and ACC-Redstone executed options for 48 AH-64E Lot 8 Remanufacture aircraft (\$392M) and AP for AH-64E Lot 9 (\$170M). |
| September 2018 | Teams completed retrofit of the redesigned strap pack to all Category 1 Severe Coastal units (Texas NG, Missouri NG, Hawaii NG, Joint Base Lewis-McCord, Korea, and Hunter Army Airfield, Georgia). Retrofit shifted to Category 2 Deployed/Deploying units. |
| September 2018 | 7-17 Cavalry Regiment accepted and signed for the first two AH-64E aircraft September 26 and departed Fort Riley, Kansas to Fort Hood, Texas on September 27. The next three |

| Date | Description |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | induction aircraft will arrive at the Central Modification Facility on October 4 for Version 4 Post Production Modifications, the estimated delivery to 7-17 Cavalry Regiment is October 30. |
| August 2018 | Since Boeing has met the conditions to restart, PM Apache resumed inductions acceptance of all U.S. AH-64E Apache Remanufacture and New Build aircraft. Two AH-64Ds were inducted and two AH-64Es were accepted with planned delivery to 7-17 Cavalry Regiment by the end of September 2018. |
| June 2018 | Began fielding the redesigned strap pack to 1-149 Texas National Guard (NG) in Houston, Texas. |
| May 2018 | Army adjusted the Army Acquisition Objective (AAO) from 767 to 812 and the APO to 791 for the AH-64E Apache Helicopter. |
| March 2018 | Army Contracting Command (ACC) sent a letter to Boeing rejecting the acceptance of all U.S. AH-64E aircraft until the redesigned Strap Pack is fielded and additional criteria are met. |
| January 2018 | Began fielding to 1-6 Cavalry Regiment, Fort Riley, Kansas. |
| December 2017 | Completed fielding of 24 AH-64E Apache aircraft to 4-4 Armored Reconnaissance Battalion (ARB), Fort Carson, Colorado. |
| June 2017 | Apache PM fielded nine AH-64E aircraft to Fort Rucker, Alabama. |
| May 2017 | The AAO is increased by 77 aircraft from 690 to 767. Authorized Procurement Objective (APO) remains at 634 Remanufacture aircraft and 56 New Build aircraft. |
| May 2017 | Completed fielding to the 1-227th ARB, Fort Hood, Texas. |
| March 2017 | Awarded AH-64E Apache MY Contract for Lot 7 though Lot 11 for a total of 244 Remanufactured aircraft, providing options to procure additional Remanufacture and New Build aircraft each year. |
| January 2017 | Apache PM completed fielding six AH-64E aircraft to Fort Rucker, Alabama. |
| November 2016 | Apache PM completed fielding to the 5th Unit Equipped (7-17 CAV) at Fort Hood, Texas. |
| April 2016 | Definitized the AH-64E SDD Version 6 contract. |
| April 2016 | Definitized FRP Contract for Lot 5 and Lot 6 for 117 Apache AH-64E Remanufactured aircraft. |
| March 2016 | The Army Acquisition Executive (AAE) approved Boeing's MY commitment of 10% savings. Awarded AP contract for AH-64E Production Lot 7. |
| February 2016 | The first Production Lot 5 AH-64E rolled off the Apache line at the Boeing facility in Mesa, Arizona. This aircraft marked the first production AH-64E with Version 4 capability. |
| September 2015 | The Joint Staff and USD(AT&L) concurred on the MY procurement request for approval. In October 2015, Apache PM received FY 2015 funding in an Omnibus Reprogramming Action to support procurement of 13 additional AH-64E Remanufacture aircraft. Office of the Secretary of Defense (OSD) Cost Assessment Program Evaluation (CAPE) visited Boeing Mesa to support MY Independent Government Estimate analysis. |
| September 2015 | Apache PM completed fielding to the 2-17 Cavalry (3-101 Attack Reconnaissance Battalion (ARB)), the Army's 4th Unit Equipped with the AH-64E Apache. Apache PM assisted and managed transfer of 20 AH-64D aircraft from Germany and Forces Command to a new AH-64 unit, the 1-25 ARB in Fort Wainwright, Alaska. Apache PM identified and provided a materiel solution to support Apache AH-64D and AH-64E helicopters for first time stationing in an arctic environment. |
| August 2015 | The Secretary of the Army approved the AH-64E Multi-Year (MY) procurement, which was definitized on March 17, 2017. Completed Manned/Unmanned Teaming (MUM-T) Expanded Capabilities Competition and awarded the contract. Fire Control Radar (FCR) Maritime Mode Testing occurred from August through September 2015 at Joint Base |

| Date | Description | | |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| | Little Creek, Virginia. | | |
| December 2014 | The Apache PM delivered 83 AH-64E Remanufacture Attack Helicopters of the 690 Army Acquisition Objective (AAO). | | |
| December 2014 | The AAE approved the Justification and Authorization to enter a Multi-Year (MY) procurement to support production from FY 2017 to FY 2021. | | |
| November 2014 | The FUE, 1-229 Attack Reconnaissance Battalion (ARB), successfully completed the first operational combat deployment of the AH-64E Remanufacture. | | |
| August 2014 | AH-64E Capability Version 4 FOT&E successfully concluded on time at Eglin Air Force Base, Florida. This capability was included in production Lot 5 with the first aircraft being DD250'd in February 2016. | | |
| June 2014 | The Government and Boeing definitized and awarded the FRP contract for Lot 3 and Lot 4. This contract supports the remanufacture of 72 AH-64E Apache Helicopters. This production activity supported completion of fielding the 2nd and 3rd Units Equipped, as well as augmentation of the training fleet. | | |
| August 2012 | A Defense Acquisition Board (DAB) approved FRP for the AH-64E Apache Remanufacture program and authorized up to 12 LRIP aircraft for the AH-64E Apache New Build program in FY 2013. The DAE ADM approved the designation of the Apache AH-64E Remanufacture and Apache AH-64E New Build programs as ACAT IC after approval of the AH-64E Remanufacture APB. | | |
| June 2012 | The Apache PM requested and received approval for the Mission Design Series change for AB3 and was formally designated AH-64E Remanufacture. The AB3A and AB3B programs were subsequently renamed the AH-64E Apache Remanufacture and the AH-64E Apache New Build programs, respectively. | | |
| March 2012 | Completed the Initial Operational Test and Evaluation (IOTE) for the AH-64E Remanufacture production aircraft. | | |
| October 2011 | The first Apache AH-64E Remanufacture production delivery occurred on October 24, 2011 with a formal roll-out ceremony held on November 2, 2011. | | |
| October 2010 | Awarded an LRIP contract procuring a total of 51 AH-64E Remanufacture aircraft. | | |
| September 2010 | Completed a successful Milestone C DAB authorizing LRIP and advance procurement actions for Full Rate Production (FRP). | | |
| June 2010 | Completed Nunn-McCurdy reporting resulting in an ADM certifying the program's progress to Milestone C and formally separating AB3 into two Milestone Decision Acquisition Programs (MDAPs) for cost and reporting purposes: the Apache Block IIIA (AB3A) and Apache Block IIIB (AB3B) programs. | | |
| December 2009 | Resource Management Decision (RMD) 802 and RMD 700 directed the PM to increase the total procurement quantity by 56 AB3 aircraft as New Build airframes and included those aircraft in the FY 2011 PB at a total of \$2.6B. This change was implemented to support an increase in the training base capacity and to establish a new heavy Combat Aviation Brigade (CAB) in the active component. This change was significant due to the fact that the baseline program was fundamentally a Remanufacture production program by design. The additional aircraft procurements would be New Build aircraft at a unit cost significantly higher than the Remanufacture unit cost. The increased unit cost, compounded with minor fact-of-life changes throughout the program, caused a Nunn-McCurdy breach to the Average Procurement Unit Cost (APUC) as reflected in the December 2009 Selected Acquisition Report (SAR). The DAE supported a rapid Nunn-McCurdy certification in response. | | |
| March 2007 | A follow-on ADM authorized a Low Rate Initial Procurement (LRIP) quantity of 59 aircraft and granted the Army authority to procure long-lead items beginning in FY 2009. The Acquisition Program Baseline (APB) schedule milestones were established for both Preliminary Design Review (PDR) and the Critical Design Review (CDR). | | |

| Date | Description |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| July 2006 | Apache PM awarded an SDD contract to the Boeing Company to begin the development effort for AB3. |
| July 2006 | The DAE Acquisition Decision Memorandum (ADM) approved Milestone B, authorized the AB3 program to enter System Design & Development (SDD) and designated AB3 as ACAT ID. |
| June 2006 | Completed the Apache Block III (AB3) Milestone B Defense Acquisition Executive (DAE) review. |

Notes

AH-64E Remanufacture (formerly known as Apache Block IIIA) schedule encompasses a continuous integration of technology to maintain overmatch which began with a risk reduction effort from May 2005 to July 2006. This effort was followed by the current development effort which began in July 2006 and continues through FY 2020. Production started in FY 2010 with funding through FY 2025, and deliveries through FY 2028.

Schedule Baseline Deviation Explanation

None

(U) Current Significant Schedule Risks and Risks Identified at Milestones/Decisions

| Event | Date | Description |
|---------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Current | 12/31/2023 | Requirements are steady, and funding is currently adequate to meet schedule and performance objectives. 1. Supply chain and labor market volatility: Over the last ~six months Boeing has experienced significant supply chain disruption to the following components: transmissions, drive-train components, gear boxes, structural components (wings, nacelles, avionics bays), main landing gear assemblies, and micro-electronics components (communication interface units, multipurpose displays, mission data recorders, keyboard unit, and displays). Additionally, balancing sustainment demand signal and production have further complicated competition for scarce parts within the supply chain that has yet to fully recover. 2. Electrical power generator: The -7 generator is now the only configuration being manufactured through both the production line Multi Year 2 and |

| | | sustainment contracts. The long-term effort to address the generator problem is the development and procurement of an oil-cooled generator which Boeing has solicited proposals for. The PM will continue to conduct special quality assessments audits on generators and critical safety items. |
|------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FRP | 8/30/2012 | Architecture Shortfalls - Refined hardware and software requirements coupled with Commercial-Off-The- Shelf (COTS) obsolescence necessitate computer / electronic tech refresh to meet Lot 4 - Lot 6 functionality. Main Transmission - Financial issues at Northstar Aerostar (Apache Block III (AB3) main transmission supplier) created a temporary trough in transmission supply, resulting in up to seven aircraft without transmissions. The AB3 prime contractor took measures to sustain AB3 production and revitalize Northstar's supply base. The PM closely monitored this plan and full recovery established in December 2012 with no critical fielding impacts expected. The PM will continue to closely monitor this plan. Net Ready - The AB3 Link 16 solution changed from a Joint Tactical Radio System (JTRS) Joint Program Office (JPO) Government Furnished Equipment radio to a Non-Developmental Item (NDI) radio. The AB3 PM is solely managing Link 16 for Lots 4 - Lot 5. A planned NDI competition for a Lot 6 Link 16 solution will be managed by the JTRS JPO. If the competitive procurement does not meet the Lot 6 timeline there will be a Link 16 capability fielding gap. |
| MS C | 9/30/2010 | Architecture Shortfalls - Refined hardware and software requirements coupled with COTS obsolescence necessitate computer / electronic tech refresh to meet Lot 4 - Lot 6 functionality. LRIP Production - Boeing has not manufactured an AB3 aircraft and is using a subcontractor for premodification for the first time. Unforeseen production variables (new subcontractors and components) could cause schedule and delivery delays. Net Ready - AB3 PM is dependent on performance of the JTRS program to achieve Net Ready KPP. JTRS is thepreferred solution to meet the Link 16 requirement at Lot 4 and Wideband Networking Waveform / Soldier Radio Waveform at Lot 6. Further delays to the JTRS program could prohibit AB3 from meeting the Net Ready KPP. Reliability - Limited flight test hours on AB3 aircraft at Limited User Test and Initial Operational Test and Evaluation does not allow for a traditional reliability demonstration in which the test unit is in the final configuration and tested for a statistically significant number of flight hours. This could result in an inability to demonstrate acceptable mission reliability to support the FRP Decision. |
| MS B | 7/30/2006 | Insufficient fidelity of Lot 6 functionality requirements Reliability Key Performance Parameter (KPP) Performance KPP Net Ready KPP |

1. Document Type Not Provided Notes: CPD dated June 1, 2010

Notes

The PM received clarification from the ACM-RA on the Mission Reliability MTBF(M) KPP for Lot 1. The intent of the wording in this KPP was to identify the fleet reliability required of the Apache Block III/AH-64E fleet as it progressed from initial Lot 1 fielding thru all successive Lots. Lot 1 fielding was anticipated to only reflect a reliability of 15.3 hrs MTBF(M) and would progressively increase as total fleet quantity and maintainer experience grew over time, reaching 17 hrs MTBF(M) by the fielding of Lot 4 aircraft. The threshold requirement (initially 15.3 and then 17 hrs MTBF(M)) is applicable across the whole AH-64E fleet (Lot 1 - n) and not limited to any particular Lot.

Performance Deviation Explanation

None

Budget Notes

None

Quantity Notes

PM Apache received an additional \$93.894M of procurement funding via Section 8121 of the Consolidated Appropriations Act for Fiscal Year 2023 that enabled procurement of 5 additional remanufactured aircraft that were previously unaffordable due to inflationary impacts. PM Apache reduced procurement quantity in Fiscal Year 2024 by five aircraft due to a reduction to the Remanufacture funding line through FY 2024 Presidents Budget enactment.

Cost Baseline Deviation Explanation

None

(U) Risk and Sensitivity Analysis

Current Procurement Estimate Risks (12/31/2023)

1 Current Procurement Cost (December 2023) The Apache program office realized increased procurement costs driven by inflationary impacts to Lots 12-15 that are procured via the Multi-Year II contract (FY22-25). The increased unit costs have not resulted in a deviation of the APB threshold.

Current Baseline Risks (11/26/2012)

Apache completed a FRP decision in August 2012 and the OSD CAPE ICE was prepared. This was the first time OSD CAPE had actuals to incorporate into their estimate from the AB3 production line. Material, labor, prime contractor rates and factors increased significantly from the Revised Original Baseline completed in June 2010. The OSD CAPE ICE unit cost at FRP increased by 13% from the Revised Original OSD CAPE ICE.

Revised Original Baseline Risks (12/16/2010)

A successful Milestone C was completed on September 27, 2010, authorizing LRIP and advance procurement actions for FRP. Milestone C separated the Apache program into the Remanufacture and New Build programs with separate APBs. The Apache OSD CAPE ICE was used to establish the APB. The most significant cost drivers in the Apache estimate are material, labor, and prime contractor labor and overhead rates and factors.

|--------------------------------|------------------------------------------------------------------------------|----------|----------|------------------------|
| Total O&S | 38,506.0 | 42,356.6 | 22,605.9 | 34,587.1 |
| Total Disposal | - | - | 41.2 | 75.2 |

(U) Current Cost Estimate Sources

Operating and Support Cost

Type: Program Office Estimate

Approved by: PEO Aviation, December 31, 2023

Note: The O&S cost estimate is based upon the OSD CAPE ICE methodology. The estimate was last updated on March 26, 2024 for fact-of-life changes.

Disposal/Demilitarization Cost

Type: No estimate. To Be Determined

Operating and Support Baseline Deviation Explanation

None

Cost Notes

The sustainment quantity of 617 aircraft differs from the acquisition quantity of 622 aircraft by five aircraft. Those five aircraft were procured as limited test articles only and do not become part of the operational inventory.

The AH-64E Apache is maintained in a two-level maintenance system (field and sustainment) by a mix of Soldier and civilian maintainers. The strategy assumes the fielding of 617 Remanufactured aircraft, each flying 238.8 hours per year. Aircraft are logistically supported by a mix of organic supply and Contractor Performance Based Logistics activities.

Other Costs: PM Apache utilizes this field to capture the OMA funded costs from AMCOS labeled "Average Cost of Morale, Welfare, and Recreation," "Average Recruiting Cost," and "Average Cost of Officer Acquisition."

(U) Operating and Support Variance with Prior Estimate

| (CY\$M) Base Year: 2010 | Estimate | |

(U) Technologies and Systems Engineering

(U) Current Significant Technical Risks and Risks Identified at Milestones/Decisions

| Event | Date | Description |
|---------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Current | 12/31/2023 | Requirements are steady, and funding is currently adequate to meet schedule and performance objectives. 1. Supply chain and labor market volatility: Over the last ~six months Boeing has experienced significant supply chain disruption to the following components: transmissions, drive-train components, gear boxes, structural components (wings, nacelles, avionics bays), main landing gear assemblies, and micro-electronics components (communication interface units, multipurpose displays, mission data recorders, keyboard unit, and displays). Additionally, balancing sustainment demand signal and production have further complicated competition for scarce parts within the supply chain that has yet to fully recover. 2. Electrical power generator: The -7 generator is now the only configuration being manufactured through both the production line Multi Year 2 and sustainment contracts. The long-term effort to address the generator problem is the development and procurement of an oil-cooled generator which Boeing has solicited proposals for. The PM will continue to conduct special quality assessments audits on generators and critical safety items. |
| FRP | 8/28/2012 | Architecture Shortfalls - Refined hardware and software requirements coupled with Commercial-Off-The-Shelf (COTS) obsolescence necessitate computer / electronic tech refresh to meet Lot 4 - Lot 6 functionality. Main Transmission - Financial issues at Northstar Aerostar (Apache Block III (AB3) main transmission supplier) created a temporary trough in transmission supply, resulting in up to seven aircraft without transmissions. The AB3 prime contractor took measures to sustain AB3 production and revitalize Northstar's supply base. The PM closely monitored this plan and full recovery established in December 2012 with no critical fielding impacts expected. The PM will continue to closely monitor this plan. Net Ready - The AB3 Link 16 solution changed from a Joint Tactical Radio System (JTRS) Joint Program Office (JPO) Government Furnished Equipment radio to a Non-Developmental Item (NDI) radio. The AB3 PM is solely managing Link 16 for Lots 4 - Lot 5. A planned NDI competition for a Lot 6 Link 16 solution will be managed by the JTRS JPO. If the competitive procurement does not meet the Lot 6 timeline there will be a Link 16 capability fielding gap. |
| MS C | 9/28/2010 | Architecture Shortfalls - Refined hardware and software requirements coupled with COTS obsolescence necessitate computer / electronic tech refresh to meet Lot 4 - Lot 6 functionality. LRIP Production - Boeing has not manufactured an AB3 aircraft and is using a subcontractor for premodification for the first time. Unforeseen production variables (new subcontractors and components) could cause schedule and delivery delays. Net Ready - AB3 PM is dependent on performance of the JTRS program to achieve Net Ready KPP. JTRS is the preferred solution to meet the Link 16 requirement at Lot 4 and Wideband Networking Waveform / Soldier Radio Waveform at Lot 6. Further delays to the JTRS program could prohibit AB3 from meeting the Net Ready KPP. Reliability - Limited flight test hours on AB3 aircraft at Limited User Test and Initial Operational Test and Evaluation does not allow for a traditional |

| | | reliability demonstration in which the test unit is in the final configuration and tested for a statistically significant number of flight hours. This could result in an inability to demonstrate acceptable mission reliability to support the FRP Decision. |
|------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MS B | 7/28/2006 | Insufficient fidelity of Lot 6 functionality requirements Reliability KPP Performance KPP Net Ready KPP |

(U) International Program Aspects

General Memo

Programs deliveries have been adjusted due to supplier and production delays. Currently, minimal impact. FMS programs are facing significant obsolescence impacts of Government Furnished Material (GFM).

Exportability and Business Issues

No Business Issues to Report

Is design for international exportability Yes Industry/Partner Exportability Cost-Sharing? Yes planned?

Program Protection: Technology Security and Foreign Disclosure Issues

No Technology Security and Foreign Disclosure Issues to report.

Program Use of the Adaptive Acquisition Framework

This acquisition is accomplished by a single program in the Major Capability Acquisition Pathway.

Technologies and Systems Engineering

AH-64E Apache Remanufacture

Major Software Efforts

| Title | Status | Fielding Date | Description |
|------------------------------------------------|-------------|---------------|--------------------------------------------------|
| Version 6.5 | Development | May 2026 | AH-64E software upgrade to add new capabilities. |
| Improved Turbine Engine Program Integration | Development | May 2029 | Integration of the T901 engine into the AH-64E. |

Major Engineering Changes

| Title | Original Need Date | Description, Rationale and Program Impacts |
|--------------------------------------------|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Improved Tail Rotor Blade (ITRB) | Jan 2028 | The ITRB was designed to provide greater damage tolerance and performance compared to the existing metallic tail rotor blade. The blade has improved airfoil geometry, a larger chord length and longer radius, resulting in an increase in thrust and torque for a given blade pitch. The objective of this project is to improve the Tail Rotor Subsystem that provides adequate directional control margins for the helicopter. |
| Improved Tail Rotor Drive Sytem (ITRDS) | Jan 2028 | ITRDS design, qualification and integration onto the AH-64 aircraft is required to account for Improved Tail Rotor Blade (ITRB) full thrust along with increased power from future T-901 engines. The current legacy AAH drive system is not structurally adequate to support increased thrust capability and additional torque required by the ITRB. |
| Oil Cooled Generator (OCG) | Sep 2023 | The development and qualification of the oil-cooled generator as the material solution to the legacy air-cooled generator based on safety, reliability, and performance concerns is the number one field concern tracked by the Chief of Staff of Army. The Oil-cooled generator will provide a significant increase in reliability, reduce failures in the field, and alleviate safety concerns of the current air-cooled generator. |
